that function key. With only 3 keys you hate to find an unused one!

The display I think we all know the LCD glass is etched with
DSP to the left of the megahertz digits, look at an angle with the unit
off or use a flashlight. Below DSP is ANF and NR. When either is on
these are visible on the display. Like all other features (freq
channel etcZ) the DSP also remembers its level and on off states
from power down to next power up.

All in all good job Icom and thanks RT Systems for the good price!

73,
Ed March WB9RAA

I have the following power tubes for sale. I know what they sell for new, but I am entertaining offers. Make me an fair offer.

Qty. of 2 Eimac 100th in factory boxes, 1 sealed box, opened other to verify content. New old stock.

Qty. of 2 Eimac 4-65A in sealed factory boxes. New old stock.

Qty. of 1 Eimac 4-1000A, appears to be new and unused, no splatter, discoloration, etc.

Qty. of 1 Eimac 4-1000A, a few faint stains on the glass, no splatter, etc. Looks almost as good as the one above.

Qty. of 1 Eimac 3-1000A, appears to be new and unused, no splatter, discoloration, et.

Qty. of 2 United 805, in factory boxes. New old stock.

Qty. of 1 Eimac 4X250B, in sealed plastic pouch. New old stock.

Also have a Jennings UCS-500 10KV vacumn variable, appears to have never been mounted, make offer.

I'm not selling this stuff to put food on the table, so if you are interested, make me a fair offer. I want to be fair to you and me. Email direct if interested, thanks.

>in all respects Paul KD6AW San Diego

All models are good, it kind of depends on your preference. Personally, all my dual-band radios are Yaesu....When I got my licence back in 1993, I bought the Yaesu FT530.....recently I picked up the Yaesu VX-1. My mobile rig is the Yaesu FT8000.

I have other radios....but those are my dual-band VHF/UHF radios.

Message-ID: <6hrf86$957@chile.earthlink.net>
Source record: 146089

It really depends on how skillful the person is. People in this newsgroup are saying it's fairly easy, however I've seen some 706 MKII severely damaged when their owner's tried to install UT-106. Bottom line is, if you feel even a bit uncomfortable about taking the radio apart and working on it, you should consider getting a professional to do it. As far as installation charge goes, it is up to the distributors, or repair shops. Icom is charging $37.50, providing of course that there is nothing wrong with the radio itself.

2526. What do I need to set up a repeater?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-24 00:00:00 UTC
From: Paul Lantz <plantz@onlink.net>
Message-ID: <6hrgbq$hi0$1@onlink3.onlink.net>
Source record: 146090

What is the minimum set up for a repeater for use in a very small area by very few amateurs?

I guess I need:

antenna, duplexer(?), radio , controller.

Phone patch would be really nice.

I am interesting in hearing what people did on low budgets.

Because this is a small area set up nothing fancy in the way of antennas. What kind of radio and controllers have people used.

My own preference is for 440 to avoid cable TV complaints.

Thanks for your thoughts

Message-ID: <6hrvl6$snc@argentina.earthlink.net>
Source record: 146091
Cross-posted to: in.ham-radio,rec.radio.amateur.equipment

It's not really simple. You need to take the covers off, remove four screws holding the logic board (PCB on the bottom of radio), carefully unplug all the connectors that are in your way. Then, flip the board toward the front panel so that you can access the bottom, unsolder the old lithium battery and solder the new one in making sure the POLARITY is correct. Non Icom batteries simply cannot fit there without some hardwiring (not recommended). IC-27A is really old and probably needs alignment, you should send it in to a repair shop rather than try to work on it yourself.

2539. WTB Kenwood SP-230 speaker.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-24 00:00:00 UTC
From: Michel Morin <morinm@csgoeland.qc.ca>
Message-ID: <uER%.1423$av.1230125@carnaval.risq.qc.ca>
Source record: 146149

Looking for a Kenwood SP-230 external speaker for my TS-830S radio. If you have one to sell, please advise me by email stating condition and price.

73 VE2CJW
Michel Morin
Quebec, Canada.

2540. Icom FS or trade

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-24 00:00:00 UTC
From: KB4AEP <crslex@iglou.com>
Message-ID: <353FE6D0.25BE@iglou.com>
Source record: 146150

Trade: Icom IC-701 solid-state digital 160-10M HF transceiver w/dual VFO's and matching PS-701 Power Supply /speaker.

Icom's first HF transceiver. The transceiver drifts pretty bad for about the first half hour, then stablizes. Other than that, It works great! I figure the caps in the PLL are getting old and tired. Radio is in excellent cosmetic condition with full output. Includes Icom hand mike + manual. Power supply is in real good shape with only a few scratches on top.

Trade for:
Kenwood TS-520 or 520S, Kenwood Twins (R-599D +T599D)
Tempo 2020 in good working and looking condition
Blackface Tempo One+PS/SPKR (MUST BE in MINT CONDITION)!
Drake B-Line in very good condition
Yaesu FT-401B, FT-101, B, E, EE, F, or ZD
or what do you have?

Must be working with full output. Manual and schematic also.
(NO SWAN OR HEATHKIT PLEASE!)

Or sell IC-701/PS-701 for $300 + shipping

I'm near Lexington, Ky.

E-mail me KB4AEP at KB4AEP@juno.com or crslex@iglou.com
or call 502-863-0500 evenings and weekends
Thanks. Mark

2541. Wanted: KLM 170w 2m amp manual

Newsgroup: rec.radio.amateur.equipment

Hi,

I'm looking for the manual for an older KLM 170W 2m amp model #
PA10-170BL. (copies welcome) I'm also seeking any technical data or
schematics for this amp. I'd be happy to re-imburse any costs
encountered. Thanks.

2543. yaesu ft-51R mike jack wiring

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-24 00:00:00 UTC
From: dan_yzs@nospamswbell.net
Message-ID: <353ff4fa.665921@news.swbell.net>
Source record: 146153

I'm trying to get an clip on speaker mike to work w/ a FT-51R. I checked the schematic for the radio and it shows the jack as a 3 conductor phone jack where the tip labelled 'MIC' and the ring shown as something called ' +B '. I figured that +B should be the battery voltage and that it would only be used for Yaesu's fancy remote control speaker mike with the LCD readout so I wouldnt need it just to get a microphone to work.

However the +B line isn't attached directly to the battery, there is a fairly complicated circuit with a couple mystery IC's between the battery and the mike jack. With the condenser mike and the PTT switch wired in series with the tip of the phone plug and the ground of the phone plug when I hit the PTT, the radio only transmits for about 3-4 seconds then it reverts to recieve mode like I don't have the PTT pressed at all.

Does anyone know if I need to use the +B connection? Does it serve to signal the HT to stay in Xmit mode? Do store bought speaker mikes for FT-51R's have 3 conductor plugs or only 2 conductor plugs?

There is a diagram for packet cable diagram in the manual on pg. 72 which shows a 2 conductor plug. The way I read the schematic if I were to stick a 2 conductor plug in the mike jack I'm connecting the +B signal to ground permanently as long as the plug is inserted. That doesnt seem right, but there's alot about the control circuit for the +B line to the mike jack that I am clueless about.

2544. Need source for reasonably priced RF power transistors

Newsgroup: rec.radio.amateur.equipment

I'm looking for a cheap source of RF power transistors in the 1 to 15 watt range
capable of power amplification up to 150 MHz. Something like the MRF317, etc.
Does anyone know of a good place to buy RF power transistors?

thanks in advance,

Charlie

Ok, this is kinda stupid, but..... Have a friend with dual band radio, remote head. Not sure, but think it's an Alinco (about 8 yrs old) if not, it's kenwood, either way, this should be a generic question. Concerning the 'new' push and hold for what I suppose is relayed power on/off like most newer radios are, what would make this radio refuse to turn off?? It had to be wired thru ignition switch so it will turn off and on with the vehicle. Radio works perfectly, but it just won't turn off! Ohm meter says the switch itself on the control head is fine. any ideas??
thanks,
Randy

Hi:

Does anyone know if Motorola makes a 500 MKZ trunked system. The radio person in charge of my towns new radio system says the new freq, will be 501 MKZ trunked. My sources say there are no trunked systems on 500 MKZ, only 800 MKZ. So my question is, would there be such a thing as 500 trunking.. Please help as its only 2 weeks till the new system is up and running, and if its only 800 mkz, I'll have to go out and buy a trunktracker.. Please e-mail.

Thanks..

Bill

>Does the Collins filter provide decent skirts and a smoother sound...
>ie. less ringing? Why have they gone to these mechanical filters?

They've gone to them because they are cheaper than a good crystal
filter, and because of the mystique among hams of the name Collins.
Realize that these are *not* the Collins mechanical filters of old. They
use a completely different design and operating principle from the filters
used in the S line and KWM-2.

That said, they aren't bad filters. There's just nothing special about
them which would warrant their use, other than their lower price than
a good crystal filter. Good quartz filters have become expensive
because they are difficult to build correctly. Special clean room
procedures have to be used, and quartz is notoriously messy to
process. Collins can stamp their mechanical filters out on a more
mundane assembly line. That keeps costs down.

I use GE MVP, EXEC II, or Mastr II radios (the latter is best).
The duplexer is either Cellwave, DB Products, or Sinclair
(the latter is best). The controller is the S-Comm 5K. If you
want phone patch, use the 7K instead. CTCSS decode and
encode is done by a Circuit Specialists module. My favorite
cost effective low windload antenna is the Comet 70cm
base/repeater antenna.

The MVP and EXEC II have the same receive strip and
exciter strip. The EXEC II has a higher power (and much
better heatsinked) PA (and a different control board, but
you don't care about that, it gets junked). The Mastr II has
a sharper receive strip, the same exciter strip as the others,
and a PA similar to the EXEC II (but slightly higher power).

All three radios are easily converted for repeater operation.
You can do that in their original cases, or by splitting out the
strips into separate boxes. I like to put at least the PA
in its own separate mounting (bolt it to a rack panel and
add a fan). Their receivers are very robust (especially the
Mastr II), and they have channel elements with active
temperature compensation. That means you tune them
once, and forget about them.

A good duplexer will make or break a repeater system. Small
mobile duplexers can be used at low power (5 watts) to good
effect, but you really want a bigger unit. On low RF sites, an
all notch 6 can duplexer works dandy (Cellwave or DB Products).

It has very low insertion loss. On nastier sites, you have to use a pass/reject duplexer. I've been very impressed with the Sinclair unit.

When it comes to controllers, there are a bunch of them on the market, but on commerical sites you'll see more S-Comm controllers in use than any other brand. They're simple, robust, and factory support is very good. Price isn't bad either. Unless your area is really remote, you'll probably want to add CTCSS to the repeater. Circuit Specialists makes the modules everyone uses (don't mess with the GE Channel Guard stuff, pitch it with the control boards). Put a tone on the repeater output. This makes folks monitoring the repeater in high intermod areas happy.

You can use CTCSS for COR too, or you can run noise squelch, depending on the IMD at the repeater site. I like to OR the two, with the noise squelch set *very* tight. This lets people with good signals get into the repeater without a tone, but keeps low level crud from kerchunking the repeater. Weak stations can still get in by transmitting tone. The S-Comm controller supports this mode of operation. (It supports 4 modes of COR operation, remotely controllable, so you can switch modes as conditions warrant.)

CTCSS isn't used to "close" the repeater. The tone is published (and we've encouraged all repeaters in the Atlanta area to use 100 Hz as the standard tone, in and out). The tone is simply for reliable COR action in the face of sometimes severe noise environments. I keep noise squlech available for those who may be visiting the area, or who don't have CTCSS encode in their radios. It is the friendly thing to do.

Antennas and feedlines make up a large subject. A lot depends on the site, and the environmental conditions at the site. Most commercial repeater antennas are very rugged, and very expensive. I've found that the lowly Comet UHF base/repeater antenna survives very well on a high site. Mine has taken numerous lightning hits, been subjected to hurricane Opal, and still survived for over 8 years at 970 feet up a TV tower. Feedline was 6 feet of RG214 (repeater in a GE box on the tower).

For longer feedline runs, hardline is practically mandatory. You just can't tolerate much line loss in a repeater system. CATV hardline can be pressed into service if matching transformers are used (the duplexer is sensitive to the impedances presented to it, ZD Engineering makes suitable transformers). But the better choice is Andrew 7/8 inch or larger hardline. It is possible to buy this used (hardline can last virtually forever if it is kept dry internally). Belden 9913 can be used for a budget repeater, but it *will* fail in a year or two due to water incursion (you can't really seal it against thermosiphoning).

It is realistic to put together a good repeater system for under $500. I have. It requires some careful shopping. The GE radios are cheap and plentiful (buy several to have spares on hand, note the commonality of parts in the GE series), the controller is inexpensive, and used hardline is available.

Finding a good duplexer at a good price is the hard part. You'll pay $200-$250 for a likely candidate (and candidate is all it is until you've tested it, lots of them have lightning damage). I'm always on the lookout for another good duplexer, and keep my eyes open at hamfests for something at a good price. (You can often salvage damaged duplexers, and make a good one out of two or more blown up ones. The trick is to get the blown up ones cheaply enough.)

Of course you need site power (12 VDC), and you should take steps to protect the site (or at least your part of it) against lightning strike damage. High sites get strikes, you have to design to survive them. You can, and it doesn't have to cost a lot, but you have to pay attention to details. Do *one* thing wrong, and your protection is lost. (Sometimes that one thing wrong isn't obvious, get competent help if you don't want to develop the expertise required yourself.)

Owning and operating a repeater can be fun and rewarding, but it isn't fun and rewarding if you are constantly having to go to the site to repair or adjust it. Choose good parts, combine them intelligently, and you'll have a system that you'll find yourself visiting annually just so you'll remember what it looks like. My idea of a repeater is a transparent range extender which works so well that no one ever has to think about it. It is just there, it works, enough said.

Trunking is not limited to 800MHZ. Reading, PA has a 5 or 10 channel system on 450 MHZ. Bucks County, PA will soon have one on 501 MHZ. If the system you are

currently monitoring is moving to a DIGITAL system you can throw your scanner away.
The only thing you will hear from that is White noise.

Dalbani is very reasonably priced, but the RF choices are a bit limited:
USA 1-800-325-2264
email savings@dalbani.com

Richardson Electronics is lower priced than many but requires a high
minimum order, like $100 or so: (a small amount of RF power devices will
meet this minimum normally)
http://www.rfgain.com/
1-800-737-6937

RF Parts in San Marcos CA has a good selection but very high prices:
1-800-737-2787
http://www.rfparts.com/

I bought a nice CTL about three years ago for $160 and considered myself fortunate to find a nice example.

I have had a single-paddle BTL for almost 30 years and always kicked myself for not getting the paddle/key combo when they were still (relatively) cheap. When I saw a CTL advertised here on the net for $160, I didn't hesitate.

I don't know if they have really become collector's items as much as people are starting to realize what quality means and how difficult it is to find it any more. "Collector's items" are bought to be looked at and admired. Brown Bros. paddles and keys are meant to be used and appreciated.

These are not the same as the old Collins Mechanical filters. They are not made the way of collins filters of old. They are getting a big ride out of saying they are collins mechanical filters
unsuspecting hams think they are just like the collins mechanical filters that went into the old collins rigs. Not.

2597. Boatanchors Web Ring

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-25 00:00:00 UTC
From: bry@mnsinc.com
Message-ID: <3541c783.6032074@news.mnsinc.com>
Source record: 145972

Hi there!

Please consider joining the BOATANCHORS WEB-RING!
This is a novel way to attract callers to your website,
and to share information among the radio enthusiasts who roam
the WWW looking for useful information, pictures etc.

Web rings have been popular for some time in other fields but
vintage amateur radio and several other ham radio groups
have been slow to catch on... UNTIL NOW!

Now you can sign up for a free service (NOT even any ADs!!)
that will expand your web site's connectivity and usefulness
and many new callers will stop by to see it!

To sign up now (FREE OF COURSE) will only take a few minutes,
and the splicing in of a little html code fragment to your web page,
and away you go! It takes almost no time.

To take a look, and see how it's done, browse to:
http://www.mnsinc.com/bry/ba_ring.htm

Best regards - Bry, AF4K

2607. installing a mobile

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-25 00:00:00 UTC
From: Anthony Szablowski <aszablowski@worldnet.att.net>
Message-ID: <6ht1rk$g1q@bgtnsc02.worldnet.att.net>
Source record: 145982

I have a Motorola Maxtrac that I'd like to have power on/off with the key, like the regular car radio.

I hooked up the negative lead straight to the battery and the positive straight to the fuse block inside the car. I took one of those "Y" shaped crimp-on type connectors and used that to put the positive lead into the fuse block. There is _NO_ fuse there, just the radio straight into the fuse block. I am installing an inline fuse between the block and the radio today. There is a fuse already on the negative lead close to the battery.

Now, question is, would this setup hurt the radio in any way? How do the professionals install the radios into the police/fire vehicles?

Thanks,

Tony

I have a small FM transmitter which I use within the confines of my home...it's a small one from Radio Shack, and it draws about 11 mA at 3 V. I already boosted the signal by attaching bunny ears to the paltry antenna that was supplied. However, it only gives good reception for a couple hours in the extremeties of the range (where I'm interested in...) Is there any way that I can plug it into the wall? I know there are voltage selector transformers at Radio Shack, but it takes two AAA's...is there an adapter around for that? If not, how can I hook it up?

TIA

Brown Bros. Machine Co. Paddle/Keys. I have one Model CTL and one Model CTL-B for sale. These legendary precision-made units both feature a twin-lever keyer paddle and a heavy-duty straight key on the same base. They have become collectors' items.

The frame and base of both units are finished in baked black wrinkle enamel. The mechanisms are in perfect condition. The bases show some wear, with chips in the enamel finish, mainly along the edges. The CTL has just a few chips; the CTL-B has more chips.

The Model CTL is $200. The Model CTL-B is $190. Add $10 shipping/insurance for each unit.

Please e-mail: jeff@detray.com or phone: 603-242-7995. Jeff NK1F.

Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

I am looking at taking my Tech-Plus test sometime in the near future. I would therefore like some information about a good starter radio to begin with. It does not have to be solid state, tubes are fine. I do not want to spend too much money at the moment. I would like a radio that covers the bands which Tech Plus allows or at least the bands which tech covers minus CW. I am mainly looking at getting a base model radio.

Any information from anyone would be greatly appreciated. If you have something for sale that might fit the bill , let me know.

I would also be interested in homebrew equipment or plans to construct a radio.

Thanks,

Chris

indeed they are 'fragile' - if this is the right word for it
we used 4x 8122 in 6 TX's for coast stations in this area. You must
check every valve for screen to controlgrid short circuit using a VOM,
up to 30% of the delivered goods showed this failure, and we could not
return them to the manufacturer! Similar experience applies for the
Danish manufacturer 'Sailor' which used 8122 in earlier shortwave
transmitter.

*** First time you test av valve be sure to run it with heater only for
at least one hour. But still some valves will have inter-electrode
short-circuit during first tests, so it is indeed a time-consuming
affair to find 4 valves to use in each transmitter.
*** Run the new valve with anode- and gridbias voltages, without screen
voltage for some hours.
*** It is important to use some grid bias circuit which will immediately
switch off the transmitter when screen-control grid shortcircuit occur,
or at least use some low resistance back-up negative grid voltage in
parallell with the variable, 18V transformer with 1N4007 diode, 1000uF
filter capacitor and a second 1N4007 gate diode (normally biassed off)
is a suggestion for secondary bias voltage to avoid screen voltage go
into the bias of the parallell valves (it is bad enough to ruin one
valve!)
*** To avoid possible control positive grid voltage, and burn-out of
another parallel 8122 valve the addition of an 1N4007 as grid reverse
polarity protection is also a good idea to add.

I have over two douzens unused type 8122 valves, but I would never vaste
the time trying to use them, I would rather use 4CX250B, the ceramic

power valves contains beryllium oxide, and must not be thrown in the rubbish bin. Poor me!!!

For a short time the DSP was included as a COME ON to get people to purchase the 706 MkII. I did not buy one at that time, however, now have a need for a small HF rig.

But - no free DSP - no 706 MkII. I think ICOM will feel the pinch from the Yaesu FT-847. A couple of bucks more, but does more too! And, there are other options in the used market.

Bill W2BLC

Chris:

Any number of rigs probably will work just fine for you. For my money I
favor the Kenwood TS-830S. All solid state except a common 12BY7A
driver
and two robust 6146B finals. I have had one about a year and a half and
love it ! I am a Tech+ just moving on to General/Advanced as soon as I
take the 13wpm cw test (May 2, hopefully) but had sort of a good
electronics
knowledge when I started (lic. in April 97) so most of the rigs features
were
not foreign to me. Not that it's a difficult rig to learn (IMHO)....
but if
you get one work with it and see if you can find an Elmer who has
knowledge
of one to help you. The TS-830S has a very "hot" rx section and 100
watts
output (actually in tune and with good tubes 100 to 125 on mine
depending on
the band). This rig gives up little (if anything) to most modern rigs
except
DSP.... Elmer's are not real hard to find for the 830 (or for that
matter any
of the X30's - 530,830,930) seems like most hams had one at one
time..... and
if they still don't they regret selling it <grin>. Only thing is you
have to
get used to tuning when you change freq a few khz.... but then thats
really no
trouble for me and it's a fact of live with all tube final rigs (or
amps).

Hi and thanks for reading this,
Has anyone had to change the Lithium battery for the memory in this radio.
Can you use a standard battery on must you purchase one (from Icom?) with
the leads already attached?
I'm sure the answer is simple, but I haven't figured out how to get the
old one out with out using a hammer and chisel, yet.

Any advise would be sincerely appreciated.

Thanks,
Don West, W9DEW

All and all I think this is just nit-picking. All tranceivers have their own qwerks. I have owned my 756 for about 6 months and have had no problems with it. It does mention in the owerns manual that cool weather may cause a delay before the CCFL pannel lamp behind the display fires up. If you see noise when you key up the radio with the processor in SSB with no mic attatched, you probally have the compressor turned up way too high.

Later

You MAY wish to rethink about the ARRL site. They too now list others. I as recently as today, have seen them advertising exams given by groups going through W5YI. Maybe others as well. They started this about a year ago. When I was an ACTIVE (monthly examiner), I was asked to submit my schedule to W5YI for submission to the ARRL's list.

So, give it another try...........

You don't need it. At least some of the store bought mikes have two
conductor plugs. I didn't like that idea, so when I built a mike
to use with mine, I used a three connector plug with the ring NC.
Xmit is activated by a 2K resistor from tip to ground.

>There is a diagram for packet cable diagram in the manual on pg. 72
>which shows a 2 conductor plug. The way I read the schematic if I were
>to stick a 2 conductor plug in the mike jack I'm connecting the +B
>signal to ground permanently as long as the plug is inserted.

It connects to V+ through a bank of resistors and a FET. I think it is
designed to shut off (or just limit?) current when shorted to ground.
I never did figure it out exactly.

I just went to a hamfest and obtained a SA-5010 umatic keyer sold by Heathkit. I am trying to find out the code practice part works. I can get the load and send memories to work in normal mode and use it as a normal keyer. But cant get the spacing to change. IE I cant get it to run in farnsworth. I can get it to send 5 wpm regiular, 13 wpm etc but the spacing wont change. I want to use 13 spacing and 5 wpm speed so my son can get his Novice.

Thanks. Please reply to me via email rbritt@visi.net

Those are for the "banks". There are actually 5. B1/B2/B3/B4 & all the channels. You can divide the 50 channels in to 4 groups of 1 to 50 channels, i.e., B1 Ch1-10, B2 Ch 11-15, and so on.

> > What is the minimum set up for a repeater for use in a very small area by
> > very few amateurs?
> >

You don't say how small "very small" is. That is important.
My first 440 repeater was a $5 commercial Regency radio split into two parts.
Used two antennas and a VIC-20 computer for controller. Most expensive part
by far was the set of crystals. Controller evolved into a 8051 with voice
synthesizer doing
full remote base. Built the duplexer from aluminum pipe. Phone patch is just
a relay
and a transformer...and more processor code. For strong signals, you can just
pass the
touchtones thru the repeater. Works, but you have no way to keep someone from
dialing
a 900 sex line and running up your phone bill. Better to use a touchtone
decoder and
block long distance calls in software.

Crystals goin up, radios coming down. I'm about half-way thru a project to use
two
Icom U12 synthesized handhelds with a pic processor to control and ID. I'm
gonna use a duplexer
'cause I have one in the junk box. (there's also one for sale at the link
below)
For short range, don't need high power or a duplexer. Also if you don't use a
duplexer, you
don't need much shielding on the RX.

ARRL put out an FM Repeater handbook. It's old, but a lot of the concepts are
still valid.
good luck, miker

I love my little 470, the thing keeps on going. However, so many antennas come on and off the BNC connector on the rig that the little tabs (posts) have worn and any BNC is very loose when I try to connect it. I need to replace the BNC female on the rig. Anyone do this? I haven't opened the rig up yet, and I wonder if anyone else has done it.

YAESU Coax Cabls for HF Rigs

I am looking for a complete RF coax cable, the type which Yaesu uses for transferring RF between the PCBs in their HF rigs. The cable is coax about 5mm diameter and has 2 mini-coax plugs on it. The cable itself must be about 30cm in length.

According to the local Yaesu dealer, these are not standard spare parts. I can buy similar cable, but not the male plugs which are connected on the ends by some crimping process.

As I am sure that I am not the first to run into this problem I wiould like to hear from others what they do, or where they buy, such finished cables.

I think the shape factor is better on a high quality crystal filter too, at least in theory. The main problem I see with crystal filters is, who do you trust to build a good one, and will it maintain its characteristics over time, crystals age. The mechanical filter seems to do better in those areas, also the mechanical filter be it tortional or the older (better? I'm not so sure) disc style, has a smoother (less bumpy on top) response than a crystal filter, but again I suppose a crystal filter could be just as good if they use enough of those crystals which could get to be many and costly.

Tell me of a hobby that is not political. Hams are just now
feeling the heat that gun owners have. The NRA used to be
like the ARRL.

Our government is passing thru a phase where it is poking its
nose into every part of human activity.

Well, there is a tradeoff between shape factor, stop band depth, and passband
ripple. You can't get a good shape factor and deep stopband without ripple
in the passband. It doesn't matter what technology you use to implement the
filter, a Cheychev response is going to have more ripple than a Butterworth
response.

I am trying to program my FT-50 to work AO-27 as described in QST a few months ago. The problem is, I can't figure out how to make cross-band split memories. No where is this described in the manual. How can I create a memory channel with a 2M transmit frequency and a 70cm receive frequency? I have tried using the VFO-duplex mode, but that is cumbersome, to says the least, when it comes time to correct for doppler.

***** DON'T PANIC!!!! *****

***** READ ENTIRE MESSAGE FIRST!!!! *****

The following message is an announcement of a 30-day discussion period on news.groups to precede a non-binding opinion poll which, depending on the results, MAY lead to a formal Request for Discussion (RFD) to reorganize the rec.radio.amateur.* newsgroups. NO VOTES ARE BEING TAKEN AT THIS TIME, and any binding vote that affects the rec.radio.amateur.* newsgroups will not occur for many months into the future, if at all. Please read the entire announcement carefully before replying or following up.

rec.radio.amateur.* Vote of Confidence

Contents:

Q: Who is doing this?
Q: How may I join the rra-wg?
Q: Why are we doing this?
Q: What are we doing?
Q: More to the point, why are we "kicking over this hornet's nest?"
Q: Why do you want to change the newsgroups again?
Q: Who are you to tell us what to do with "our" newsgroup?
Q: How long ago were each of the rec.radio.amateur.* newsgroups created?
Q: Why are the non-rec.radio.amateur.* newsgroups rec.radio.info and rec.radio.swap included in this proposed opinion poll?
Q: Where can I obtain a copy of the original newsgroup charters?
Q: Where can I find out more information about the Usenet RFD/CFV process?
Q: I don't want any of the newsgroups to change. What should I do?
Q: I want to go back to one single newsgroup for amateur radio on Usenet, like we had back in the 1980's. What should I do?
Q: I support some of the newsgroups for amateur radio, but not others. What should I do?
Q: I support the existence of a newsgroup, but disagree with its charter. How should I vote?
Q: I would like new newsgroups to be created, what should I do?
Q: I have no opinion, what should I do?

Q: Who is doing this?

The rec.radio.amateur.* Working Group (rra-wg@theporch.com, which initiated the last major reorganization in 1993) is the point-of-contact

for questions about this proposed opinion poll. Principal members are Paul W. Schleck, K3FU, and Jeffrey Herman, KH2PZ. Though not an rra-wg member, Gary Coffman, KE4ZV, also endorses this proposed opinion poll. The proposed opinion poll will be conducted by an unbiased third party from the Usenet Volunteer Votetakers (UVV), Jeremy Billones (billones@primenet.com).

Q: How may I join the rra-wg?

Anyone who volunteers may join the rra-wg. The rra-wg has always solicited volunteers from when it was created in 1993 (originally named rra-reorg) to draft an RFD to reorganize the rec.radio.amateur.* newsgroups (and continues to serve as an advisory group for FAQ maintainers and new newsgroup proponents). You may join the rra-wg by subscribing to its mailing list.

The automated list manager address is

listproc@theporch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The list owner address is

listown@jackatak.theporch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

Q: Why are we doing this?

Discussion on the rec.radio.amateur.* newsgroups shows that there is a difference of opinion about the current newsgroups and their charters. Assertions on one side of the argument that the charters were voted upon by the readers have been countered with assertions on the other side that the votes took place years ago, by a very small minority of the current readership. There is also the strongly-held opinion among some that we have "too many newsgroups." The following is a sample posting from the discussion thread on rec.radio.amateur.misc that led to this proposed opinion poll (the entire thread may be viewed at DejaNews, http://www.dejanews.com/):

Q: What are we doing?

As a preliminary (and perhaps even diverting) step to an RFD (which would be very laborous and time-consuming, and perhaps unnecessary), we propose to conduct a Straw Poll, or "Vote of Confidence" (similar to the vote of confidence for a Prime Minister made by British Parliament, or a non-binding resolution of the U.S. Congress). We do it Usenet-vote style (utilizing a neutral vote-taker from the UVV) with an RFD and Call For Votes (CFV) period. During the RFD, we have discussion pro and con about each newsgroup and its charter. During the CFV, a vote is taken where a "Vote of Confidence" yeah or nay for each newsgroup, as currently constituted and chartered, is given by each voter (YES/NO/CANCEL/ABSTAIN votes are valid).

What votes mean:

YES: I support the existence of this newsgroup and its charter

NO: I believe that this newsgroup's existence or its charter should be reconsidered in a future RFD/CFV

CANCEL: Delete any previous votes I made concerning this newsgroup

ABSTAIN: I have no opinion concerning this newsgroup

Each newsgroup that does not pass a vote of confidence by Usenet voting standards (2/3 and 100 vote majority of YES versus NO votes) may be referred to the Usenet newsgroup creation process where their deletion or modification (based on a rough consensus of the 30 days of discussion and how much they lost in the vote of confidence) is proposed. Each newsgroup that does pass a vote of confidence will have its charter, and justification for existence, reinforced to the readership (as the current readership voted on it).

Q: More to the point, why are we "kicking over this hornet's nest?"

Sometimes hornet's nests can get big enough that they wind up falling down anyway. As shown in the thread above, there are significant undercurrents of disagreement over the current newsgroups, their charters, and even the suggested guidelines and rules of net-etiquette that many on the newsgroups advocate. If the proposed opinion poll shows strong agreement with current practices, then that would help reduce (though not eliminate) newsgroup arguments on the subject. If, however, the proposed opinion poll shows strong disagreement, then it's probably better that we know that right away, and take steps to fix the current situation before it degrades any further.

Q: Why do you want to change the newsgroups again?

Only some of the proponents of this proposed opinion poll wish to change the newsgroups. Some wish to simply have the current newsgroups and their charters reinforced. All of the proponents agree that an up-to-date opinion poll of the readership is desirable at this time. Whatever future actions will be taken will be determined by the results of this proposed opinion poll.

Q: Who are you to tell us what to do with "our" newsgroup?

One answer is that on Usenet, no one "owns" an unmoderated newsgroup. Newsgroups are voted into existence by a democratic process to determine consensus (and lack of significant objection) for using shared network resources to support them. All of the existing rec.radio.amateur.* newsgroups passed such a vote at some time in the past, and should pass such a vote again if there is strong support for their continued existence.

Another answer is that this is just a non-binding opinion poll of the readership to determine a consensus, if any, for making changes. It would still be necessary to undertake a formal RFD/CFV process to change any Usenet newsgroup (and that was always possible, anyway).

It should also be emphasized here that no individual rec.radio.amateur.* newsgroup is being singled out. Rather, a consensus of the readership concerning ALL rec.radio.amateur.* newsgroups is being sought.

Q: How long ago were each of the rec.radio.amateur.* newsgroups created?

1972 (or possibly earlier, this date is when UCSD joined the ARPANet):

Info-Hams (original ARPANet mailing list at Simtel-20, continues today
at UCSD as a gateway of rec.radio.amateur.misc)

1979:

Creation of Usenet News at Duke and UNC

rec.ham-radio.packet *
rec.ham-radio.swap *

1991 Reorganization:

rec.radio.amateur.misc
rec.radio.amateur.packet *
rec.radio.amateur.policy
rec.radio.cb
rec.radio.swap

1992/3 Addition:

rec.radio.info

1993 Reorganization:

rec.radio.amateur.antenna
rec.radio.amateur.digital.misc
rec.radio.amateur.equipment
rec.radio.amateur.homebrew
rec.radio.amateur.misc
rec.radio.amateur.policy
rec.radio.amateur.space

1996 Additions:

rec.radio.amateur.dx
rec.radio.amateur.boatanchors

* = obsolete

Current newsgroups covered by this proposed opinion poll, and the years
in which they were created:

rec.radio.amateur.antenna (1993)
rec.radio.amateur.boatanchors (1996)
rec.radio.amateur.digital.misc (1993)
rec.radio.amateur.dx (1996)
rec.radio.amateur.equipment (1993)
rec.radio.amateur.homebrew (1993)
rec.radio.amateur.misc (1991)

rec.radio.amateur.policy (1991)
rec.radio.amateur.space (1993)
rec.radio.info (1992/3)
rec.radio.swap (1991)

Q: Why are the non-rec.radio.amateur.* newsgroups rec.radio.info and rec.radio.swap included in this proposed opinion poll?

Though one level up in the rec.* hierarchy, these newsgroups are principally used by readers of rec.radio.amateur.*, and their fates would substantially be decided by any significant reorganization of the rec.radio.amateur.* newsgroups. Though created by a rec.radio.amateur.* reorganization, rec.radio.cb is not included in this proposed opinion poll.

This announcement has been cross-posted to all rec.radio.* newsgroups (except for rec.radio.broadcasting and rec.radio.info, which are moderated). In addition, the following individuals were consulted prior to this announcement (note that consultation does not necessarily imply endorsement):

Richard Eckman, KO4MR, Proponent of rec.radio.amateur.dx
Brian Kantor, WB6CYT, Administrator of Info-Hams/Ham-* mailing list gateways of rec.radio.amateur.* newsgroups at UCSD
Ian Kluft, KO6YQ, Proponent of 1993 rec.radio.amateur.* reorganization, former rec.radio.amateur.* FAQ Maintainer
Jay Maynard, K5ZC, Proponent of 1991 rec.radio.amateur.* reorganization
Brian Short, K7ON, Moderator of rec.radio.info
Rick Stealey, K2XT, Proponent of rec.radio.amateur.boatanchors

Q: Where can I obtain a copy of the original newsgroup charters?

ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.info
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur-reorg
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur.dx
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur.boatanchors

Q: Where can I find out more information about the Usenet RFD/CFV process?

ftp://rtfm.mit.edu/pub/usenet/news.announce.newgroups/How_to_Create_a_New_Usenet_Newsgroup
ftp://rtfm.mit.edu/pub/usenet/news.announce.newgroups/How_to_Format_and_Submit_a_New_Group_Proposal
ftp://rtfm.mit.edu/pub/usenet/news.groups/Guidelines_on_Usenet_Newsgroup_Names

Q: I don't want any of the newsgroups to change. What should I do?

Express your opinions on news.groups (the default followup newsgroup for this message) and vote "YES" for all of the existing rec.radio.amateur.* newsgroups when the proposed opinion poll occurs (in 30 days time).

Q: I want to go back to one single newsgroup for amateur radio on Usenet, like we had back in the 1980's. What should I do?

Express your opinions on news.groups, and vote "NO" for all (or all but one) of the newsgroups when the proposed opinion poll occurs.

Q: I support some of the newsgroups for amateur radio, but not others. What should I do?

Express your opinions on news.groups, vote "YES" for any newsgroups that you wish to remain unchanged, and vote "NO" for any newsgroup you wish to have reconsidered in a future RFD/CFV when the proposed opinion poll occurs.

Q: I support the existence of a newsgroup, but disagree with its charter. How should I vote?

Since the proposed opinion poll is for both the existence of given newsgroups AND their current charters, you should express your opinions on news.groups and vote "NO" for that newsgroup when the proposed opinion poll occurs. Again, this is a non-binding opinion poll simply to determine if current newsgroups should be considered for modification or deletion, not a vote to actually modify or delete these newsgroups.

Q: I would like new newsgroups to be created, what should I do?

Creation of new newsgroups is not being considered by this proposed opinion poll. A future RFD/CFV would have to be initiated to do this. You are, of course, welcome to express your opinions concerning new newsgroups on news.groups.

Q: I have no opinion, what should I do?

You may wish to read the following 30 days of public discussion on news.groups about this proposed opinion poll to develop your own opinions. Discussing your resulting opinions on news.groups may help further develop your opinions, or those of others.

If, after reading and participating in the public discussion, you still remain undecided, you may choose to abstain from the proposed opinion poll. You may do so informally by not participating in it at all, or formally by explicitly voting "ABSTAIN" for all of the newsgroups when the proposed opinion poll occurs.

Watch for an announcement of the STRAW POLL (CFV) in about 30 days. Questions to rra-wg@theporch.com.

Howdy. I am looking for some DEAD or near dead HF or VHF rigs to tinker with in my spare time. If you have something kicking around the shack you no longer have any use for let me know as it might be something I'd want to tinker around with and try to get working. I would prefer gear that hasn't been torn apart or robbed of parts. Drop me some email with what you have and your asking price and maybe we can work something out. Thanks in advance.

The ARRL is also looking out for your interest in attempting to force "voluntary band plans" to be considered LAW under the GOOD PRACTICE statement.

In other words, if you don't follow the ARRL band plan for 2 meters, or 160, or the AM window, or the DX window - you could be sited as being in violation of FCC regulations.

We have too many rules and regulations as it is, and I certainly DO NOT have any desire to have the ARRL in charge of anything.

As with many organizations claiming to represent an entire hobby, worker group, manufacturing group, etc., the ARRL only truly represents themselves - all in the name of "the greater good" for all concerned.

When is the last time you saw the ARRL reach out and ask ALL hams what their thoughts were on the future of ham radio? What ALL hams want/need is being determined for them.

2713. Help with Dentron MLA-2500

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-26 00:00:00 UTC
From: Tom Ostby <ostby@ix.netcom.com>
Message-ID: <35432FC8.EBA91ED9@ix.netcom.com>
Source record: 145879

Thanks for reading this;

Several months ago I bought a MLA-2500 over the internet. Just now got my shack in working order so I fired up the old Dentron.

What I found out is either one of the tubes is bad, or something else is not quite right.

I get out (according to the built in watt meter) is around 4-500 watts out with aprox 35-45 watts drive. All bands into a dummy load.

Grid current is around 180-200ma, with plate at almost an amp or more depending on the drive applied. I have not applied any more that 45 watts of drive fearing I'll melt down the filiments inside the tubes.

Now I have heard that you can run this amp on one tube. If so, any comments. I would like to rule out a bad tube.

I know that I should not have that kind of current going on with the grid and plate with 35-45 watts drive. Any ideas?

Other that that, the amp has received many good comments on the air.

If I can't figure out the problem, I'll sell it off for $250 without the tubes, and $350 as is since I don't have the time to trouble shoot this amp.

Thanks in advance.

> VE3KBL

Paul,
Here are some thought starters. A GE Mastr II Mobile makes a good
repeater. Duplex conversion and other info are avaliable on the web,
the SEITS website comes to mind. Throttle it back to about 35W output.
The NHRC repeater controller kit looks like a good buy at $39, see
their website. You can get a Mobile duplexer for about $50 at hamfests,
these are good for 50 watts. Get some CATV hardline, the cable tech
should be able to tell you where you can order PL259's for it. There are
several other approaches to connectorizing this stuff that have been
discussed here in the past. A specific query on the subject should get
some info. You can use the matching sections made by ZD engineering but
they are not needed in real life. Your 75 Ohm cable will present a 1.5:1
SWR at the transmitter so if your antenna is well matched the loss wont
be to bad. I've heard ok reviews about hustler single band antennas
for low cost repeater use.

Source record: 145887

Well I did it! After a 30 absence from the HAM ranks I've returned. Passed the Tech+ this last Fri. Now, I want to get an HF station up, so I can get my code skills back and work on lic. upgrades. I want to get a good rig, esp. RCVR section (this is real important see my post in rec.radio.amateur.antenna), that will last for some time to come.

1.) I'm looking at the Yaesu FT-847 or Icom IC-746? I looked at rig for under a $1000, but by the time you add a few extras they too can get pricing.

2.) Used rigs: Are there any that should be avoided? What are the good ones to consider, and a price range that is fair?

3.) My minimum system is going to be XCVR, Ant. Tuner, Key, Mic, Dummy Load and and a poor antenna :-(, (see my post in rec.radio.amateur.antenna). Anything else I should consider?

2724. Globe Chief Info Wanted

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-26 00:00:00 UTC
From: alchazz*@ix.netcom.com
Message-ID: <alchazz*-2604981112010001@bos-ma7-07.ix.netcom.com>
Source record: 145890

I recently acquired a Globe Chief xmtr, Model 90-A. It appears to be in almost new condition. I would like information regarding output impedance and crystal drive parameters.

I am a non-amateur and would like to use this as an RF souce for my plasma etcher. My current plasma etcher uses a now flaky 50W tube osc. to generate the plasma. The 100 watts this unit is rated at should improve my etch rate. But I don't want to jam the airwaves nor blow the unit.

Can I replace the output terminal with a coax conn. and deliver the RF to the load via a coax? Any hints would be appreciated.

I have troubleshot and repaired the 50W osc. too many times to count. I suppose a modern SS osc. and amp. should be used, but the price of this unit was too good to pass up.

If it can't be modified, maybe a good home with a needy amateur might be found.

Al

writes:

And writes and writes.... you get the idea.

Murray is running a little cottage business but is hitting a few too
many newsgroups with his little business. For those who haven't figured
it out Murray is a sort of professional flea marketeer. Having watched
him in action I'll share.

At Midland I watched him beat down that family of a silent key on the
price of a SB-200 which then spent the weekend on his table for $100
more than he paid. The next week it came to visit these newsgroups with
an additional $100 tacked on the the price. This sort of thing offends
me ethically but might not bother others, at least you can make an
informed choice about doing business with this individual.

2726. FS: R.F. Signal Generator.

I have a Heathkit R.F. signal generator for sale. The frequency range is from 100 Khz to 110 Mhz (higher with 2nd and 3rd harmonics.) The unit has six different knobs on it that do all sorts of things. This is a great unit for someone that is just starting out with a R.F. signal generator. The unit is in great condition and works very well. I do not have any need for the unit any more - if you do, I am asking $25 for the unit. Please send a reply to my E-mail and not to the bulletin board. Thanks.

In another case of lost on the left, big brother came up with the IDEA of TYPE APPROVAL.

For you history buffs, the FCC is not that old. Remember when , as a USA citizen
under the wireless treaty of (around 1937) we, the people retained the right to receive
anything on the air waves.

And you might remember ,back in the 1960's, we used to take old army navy gear
and remake it to our needs.

The whole idea of type approval was not cause RF noise . In receivers the local osc would leak thru the antenna conection.

This was done by design in tv's approved in the UK, so the dreaded tv tax police
could see if you had paid your tax on your tv, by using Radio direction finding gear

What began as a way to not cause your neighbor rf noise, has become an well..... the mess we know today

Thanks for your opinion. Sorry my actions bother you so much, Gerald.
All hams are swapper, I just have more time to do it. If if bothers
you, just pass my ads right on by. Actually, I paid thier price for
those two items, and If I think they are worth more, why not ask it,no
one has to pay my prices, surprisingly tho, they are eager to as I back
up the units I sell. I buy em as is, clean em, checkem and sell em,
money back gauranteed. And I can back that up Gerald. Dont know what I
did to deserve your "ire" but frankly, if you are going to make it
public, Im going to reply, and it may not be nice!! You piss me off. If
I have done the same to you, you should take it up with me, not the
group, instead of picking on an honest trader, why dont you find some of
those guys selling "boxes of rocks" on the internet and calling them
radios.
Jerry, I notice in your 34 Posts to the news group THIS MONTH
alone, you have lots of "attackees" and that you are the attacker
mostly. You are trying to turn me in to an attackor, and so I will.
Please identify yourself, next time you see buying something I might
clean up fix up and sell for more, so I can beg your forgiveness,
perhaps kiss your ring, and make things right with Jerry (radiogod).
Bottom line to all this is BITE ME. And drop this thread quickly. Im
too busy making people happy to mess with you, BUT it does me good to be
able to write all this crap once in a while. Thanks for the
opportunity. 73 ole buddy! Murray Neece Odessa, Tx PS. I have a

special deal on "anger" cases here, my will will counsel you for half price...if you like. OH YEAH, one more thing, speaking of wasted band width, go back and look at your posts to the groups, and if you desire to reply, reply to me at kc5mdm@iglobal.net if this junk belongs anywhere, thats the best of choices.

The following is a list of radio gear that I am offering for sale. All equipment is being made available on a first come, first serve, basis. E-mail offer to me, and all reasonable offers will get a reply if the item is still available.

Icom 706 with remote cable and mounting bracket for face

SG-231 SmartTuner - antennr coupler 1.8 to 60 MHz.

SOLD Kenwood TM331A 220 MHz mobile radio. Excellent shape. No bracket or manual.

Yaesu Vertex 2011 commerical VHF radio - Brand new condition
Yaesu Vertex 7011 commerical UHF radio - Excellent condition
These radios are based on the Yaesu 2500M chasis. I have the programming cable and software. Each radio has 99 channels that can be placed into 10 groups.

MFJ 1276 packet/pactor tnc - Brand new condition

DX-390 shortwave radio. - Brand new condition

PRO-39 scanner - restored cellular excellent condition

Icom IC-W31A duel band handie talkie with 800 MHz RX includes cellular
3 batteries - Tucker fast charger (incomplete needs cup)

Uniden Bearcat 895XLT - Includes home made computer interface cable and some collected
software. Brand new condition

3 element 6 meter beam

6 meter Ringo Ranger

Buyer is responsible for all packaging costs, handling and shipping charges/expenses.

** E-mail your offer to billybob@mallsurfer.com **

Good lord! I sold one of these for $35 (with a homebrew keyer) at a hamfest
a couple years ago. I didn't realize they'd been transmuted into solid gold.

It is as fine a key as he says, though, makes a Bencher seem like junk. I
used mine extensively back when traffic handling was mostly CW. But it
was gathering dust in recent years, so I hauled it off to the hamfest. Cut
the price twice before it sold. If I'd suspected it would become a collector
item, I might have held out for more money.

2751. Re: Motorola Trunked system

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-26 00:00:00 UTC
From: ilonka00@hotmail.com
Message-ID: <6hu07j$b9l@bgtnsc02.worldnet.att.net>
Source record: 145953

All the current high-end radios (Spectra, MCS, MTS, LTS, XTS,) are trunked capable at VHF, UHF, and 800. Depends on what firmware the buyer purchases with the radio. In the U.S. I don't think VHF trunking is permitted without a waiver from the FCC. There are numerous 403 MHZ trunked systems in use by the military and feds. DOn';t know if t-band 500 mhz trunking is done in the states (or legal by fcc) but there is no reason it can't be done. of course, channel spacing, co-channel interference, and other technical issues may be bigger factors at vhf/uhf than 800. what is the location of this system?

:>
:Any number of rigs probably will work just fine for you. For my money I
:favor the Kenwood TS-830S.

I started with a Yaesu FT-100 (I think an FT-100EE). It covers 160 - 10
(except 30 17 and 12, though you could listen on 30, since it has 10 MHz to
get you time signals). If you get one that is running well, $300 - 400 ought
to do it I think; ten minutes with an elmer and the instruction manual (so
you learn how to calibrate and tune it correctly) and you're off. I used it
regularly on 80, 40 and 15; then I hooked up a mic and it was great on 10 as
well.

Subject: Yaesu FT-920 - MOD to transmit on CB Bands ?

why always negative answers?
Tell me of a ham operator that never use a CB?
I bet you you can count them if there's any,how about if this fellow
just want the MOD for an emergency use and who cares if he want to use
the 27mhz portion only...is his $$$..
My penny
Luis Velis Jr.
n3tuk@netkonnect.net
n3tuk-luis@juno.com >>
I'm sure most Hams have used a CB at one time or another. Driving a truck for a living, I listen to one more than I like to admit. There are some good, and courteous operators on the citizen bands, although there few and far between. Most of the operators just want to belittle others, and see how much power they can put out. On the other hand, Hams (98%) go out of there way to help. Most talk over my head, but when the realize this they don't belittle me. They come to my level to try and help me to understand. This is very rare in today's time. Do you have your Ham ticket? If not I urge you to get the no code and tune into the 6m band, there season is here and the band will be opening. I bet you'll never go back to CB. The world awaits. You will make new friends in far of lands. I see more and more funny looking antennas on the big rigs. Go ahead and tune in on a friends rig.

Source record: 145962
Cross-posted to: rec.radio.amateur.equipment,rec.radio.scanner,alt.radio.scanner

Greetings, all...

The May issue of "Monitoring Times" has a back-page editorial by Bob Grove blasting the ARRL for taking credit for "saving" us from HR2359. He says (and I agree) that the ARRL is taking too much credit for a half-baked job, and continues on:

"The FCC is preparing to decertify amateur radio equipment that can be altered for extended frequency coverage."

and notes the ARRL silence on that.

My question is: Is the above statement true, or is it just "crying wolf?" I thought the Big Three got all up-in-arms about the original bill over that issue and it was "addressed." For example, does Yaesu even make an HT that wouldn't be decertified if that statement is true?

Does anyone have any solid facts on this issue?

Thanks much,

Eric, KB0YDN

I'd check AES/HRO or Burghardt to see what they've got used. I can reccomend the IC730 which show up used from time to time. Solid
state, first radios to have WARC bands, which are nice. That's
really the problem with most of the old tube radios is they don't
have WARC bands, 30/17/12. I had an IC730 but sold it to my brother.
Put up a wire antenna. And go to Radio Shack and buy an HT for 2m.
That'll set you up pretty good. 10M really works nowadays too.

These towers will work for most light beam applications. I used one for years and weathered some fairly heavy wind storms using a Moseley TA-33 antenna on it.
The most common failure mode of this tower is twisting which will cause a total collapse. It happened to a friend of mine.
If you go through with the deal. install torque arms and guy on it to preclude it from twisting. The Cushcraft A3 should not present a problem.

Good luck....73's...Dick, K7RNZ

Have not used the FNB-42 so can't answer your question. Was wondering if you or anyone else knew how safe it is to use the FT-50R with no battery attached at all. For example can I power it from the wall charger alone, or the cigarette lighter adaptor with no battery attached?

Also, do you think the cigarette lighter adaptor would charge an FNB-41 battery with the radio powered down? With or without the car engine running?

Thanks - Bob

Yes I Will. The A-99 comes (or used to come with) with a chart that
tells you what
to cut it down to for use on the top of 10m and even into VHF low.
However you may not be able to use it on 11m anymore.

I use mine with a tuner on 40 m to 6m. It works sorta <G>

On the lower 1/2 of 10m and on 12m (and 11m) its good without the tuner.

2773. Thanks for info on: What do I need to set up a repeater?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-27 00:00:00 UTC
From: Paul Lantz <plantz@onlink.net>
Message-ID: <6i38sr$sr2$1@onlink3.onlink.net>
Source record: 145677

Thanks for the detailed replies.
I am definitely thinking about the very low end of the scale. The effective range to be covered is 10 miles or less. Nearest other repeater is 200+ miles away so any kind of interference would be a welcome diversion.
For a range like this, and from a very low height, I suspect a few watts is more than enough.
As you can guess, this is just an idea of how to extend the range of a few people with HTs that are in a small town.
I appreciated the ideas for used commercial radios.
Site power no problem as probably just set it up in the back yard.

2774. Azden 7000 Series Mods???????

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-27 00:00:00 UTC

2775. FS or Trade: Yaesu FT-709R

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-27 00:00:00 UTC
From: Chris Buckley <cwbuckle@mtu.edu>
Message-ID: <35453AA2.630E9C18@mtu.edu>
Source record: 145679
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

This Handheld has all the features with a very low price. I'm just thinking of upgrading to a dual bander. If you would like to trade for this radio, that is definately an option. er!

The radio comes with the antenna, the 12V (High Power) battery, a car adapter for battery charging, soft case, and a speaker mic. It is a very
rugged radio, looks like it could be run over with a car (this feature, fortunately, has never been tested) and keep going.

Features:

Handles 6-15VDC
Has low power (400mW) or high power (4W) selection
2 sensitivity settings for VOX operation
Power Saver Mode
Priority Monitor / Call Freq / makes for 11 memories.
Lamp for night use
Modifyable freq step
Full DTMF and CTCSS/PL capability.
Heavy Duty Belt Clip

I have no trouble whatsoever bouncing this thing off of repeaters in low power from a couple of miles away. 70cm isn't as active as I'd like it to
be around here, so I haven't been able to get much use out of this.

I'm looking for a **small** 2m/440 yagi antenna (1 or the other, or both) which I can use as a portable base antenna.

I'll take any reasonable offers on this one.

>or anyone else knew how safe it is to use the FT-50R with no battery
>attached at all. For example can I power it from the wall charger alone, or
>the cigarette lighter adaptor with no battery attached?

The wall charger provides enough power for receive operation and for
charging a battery, both at the same time if you want. But it does *not*
provide enough current to transmit. If you want to transmit, you'd better
have a battery pack attached.

The cigarette lighter adapter does provide enough current to transmit
as well as anything else you might want to do. So you can use the
radio without a battery in this case. The same is true if you use a
DC power supply of adequate capacity.

>Also, do you think the cigarette lighter adaptor would charge an FNB-41
>battery with the radio powered down? With or without the car engine
>running?

As long as the cigarette lighter socket is powered (it isn't when the
ignition is off in some cars), the cigarette lighter adapter will
provide enough voltage and current to charge the battery. The radio's
charger circuit works whether the radio is on or off.

Hi Cris I think you would be doing the right thing ordering one I have, and
looking forward to getting it (ComCentre and Mainland Radio say the First
shipment will be here in a couple of weeks)
The frequency range of the 847 is: 100khz-76mhz (even though to spec's say
100khz-30mhz, 36mhz-76mhz) Yaesu has modified the 30-36mhz.....Good news
for us MUF watchers
108mhz-174mhz and 420mhz-512mhz!!
The spec's sound great, I have seen a number of reviews on the reflector
groups....they have been nothing but positive......I think Yaesu have got a
winner here!!!!!!!

From: jpoulin@honk.org
Message-ID: <6i2rlg$t7i$1@nnrp1.dejanews.com>
Source record: 145718

I am thinking of purchasing a SM-8 for my IC-706.

Has anyone used this combo before ?

If so, how is the Audio Quality of the SM-8 ?

Do you think it is worth the buy ?

In Ottawa Canada, they are selling new for around $280-$300 bucks
including the adapter cable.

Any info would be greatly appreciated.

Astron 20 amp power supply like new in origional box with documentation
used very little..two meters on front volts and amps
$80.00 firm plus $6.00 for ups shipping

Mfj deluxe versa tuner 2 model 948 nice shape with book $75.00 ups
shipping included..
no internal dummy load..

The Mfj-948 is dessigned to match any transmitter to almost any
antenna,including dipoles,inverted vees,verticals,mobile
whips,beams,random wires,and others fed by coax lines,balanced line or a
single wire. An anenna-selector switch provides versatile antenna
selection. The Mfj will handle upto 300 watts of rf power from the
transmitter from 160-10 meters. The mfj-948 employs a peak reading cross
needle meter so forward power,reflected power,and swr may be read
simultaneously..

>I think what he's referring to is extended *transmit* coverage beyond
>that necessary for CAP/MARS. Personally, I won't miss it...

Me either. I have been a ham for almost 21 years. In that time, I have NEVER understood why hams are so fascinated with modifying their rigs to transmit outside of the allotted ham bands, except for CAP and MARS, of course (and out of a half-million or so US hams, only a few thousand are licensed for CAP and MARS operation!).

We modify our HF rigs to transmit anywhere they receive, and we modify our 2m FM rigs to transmit from 136 to 174 MHz. WHY? Even if we DID have a reason to transmit out of band, it's illegal to do so because the gear isn't FCC type-accepted for it. FAR too many HF rigs are EASILY modified to work 11m CB and the "free band" areas above and below 11m CB. It's as simple as lifting a diode, clipping a resistor, tying an IC pin high or low, or some other insignificant mod. THIS is what the FCC undoubtedly objects to, and I whole-heartedly agree. It would be quite easy for the manufacturers to block this in software or firmware. Why not offer CAP and MARS operation as a no-cost option, with slightly reprogrammed band limits in the software?

Personally, I would love to see ham-bands-only gear make a comeback in the modern world, with band-switched front-ends and such. HF receivers would perform SO much better if this were the case, especially if you throw in modern DSP techniques and top-quality filtering along with a nice, tight front-end.

What's so special about having general coverage receive in an HF rig? I own a non-general-coverage HF rig (an old Ten Tec Corsair I) and a very nice little Sony SW-100S portable shortwave receiver, and I'm quite pleased with both. I can take my SW receiver on vacation trips as well as listening to it at home. Can you take your YaeKenCom HF rig, P/S, and antenna along on a Caribbean cruise or bus trip around Europe or backpacking up in the Rockies? Of course not. My point is, in my HUMBLE opinion, the hobby would perhaps be BETTER off if ham gear

were ham-bands-only.

Your mileage may vary.

2795. Re: what to buy FT-847 or IC 746???

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-27 00:00:00 UTC
From: Tom Nicastri <tnic@IDT.NET>
Message-ID: <6i2hoh$4h@nnrp4.farm.idt.net>
Source record: 145724

I have been using the 847 for a few weeks.

Prior to that a friend loaned me an Yaesu FT-7 (very old analog rig
20 watts on a good day) and a Yaesu 900 - 100 watts very nice radio.

I say the 847 has em both beat. I did not buy the 847 to work Sat's.
Its my only HF rig - but I alos now have 2m, 440, 6m FM and SSB. That
about filled out my station with one purchase! I still have not had the
time to work 440 SSB.

I plan to try Satellite soon. If I did not own this radio I would not be
trying that.

I found my radio to be bug free. All features work as advertised.
NO PROBLEMS.

I am not pleased with the audio output. Its just not quality sound on my
sample.

The HF side is very good. The DSP Hi pass/Lo pass, Notch, and Noise
reduction really work well together. Especially when adjacent brodcast
stations are mucking up 40 meters. I can use the band pass to zero in on
my target station and "cut out" the other station. Nothing is perfect -
this is just my impression.

A friend who has loads of HF radios agreed the rig is the only choice in
its price range for him - but he wished it had dual band receive. He
agreed with me that all the capability is the primary basis for choosing
the radio.

He stated his Yaesu 920 was a better HF rig but the 847 was not far behind
it.

The radio has been out a while and enough units have shipped for us to
know if tere was a serious problem.

I can not address the Icom radio I have not seen it.
Each radio manufacter had good and bad radios in its lineup. None has all
good or all bad radios.

I would recommend the 847. Its the first HF rig I have owned - and much
more. Next contest I will be on many new (for me) bands for the first
time.

I ordered the FC-20 matching tuner for the radio (about $260) from HRO
Deleware. Bob at HRO said he is shipping mine out today (first one he has
gotten I think - Bless you Bob). I need the tuner to get onto 17meter.
The SPIRO trapped dipole antenna I am using for HF needs a tuner to get me

onto 17meters. The antenna is great for 20 & 40 and fair on 80 and bad on 17 (swr). The FC-20 shoud take care of the 17meter swr and improve 80.

I know I was desprate for info when this radio came out - I will try and be on 40m tonight Monday 4/27 & Tuesday 4/28 at 22:30 NYC time on around 7.225 to 7.335
depending on the broadcast stations. I will try and find the first slot available moving up the dial. If I can answer any quesions about the 847 I will try. I at least have the owners manual!

Hmm, maybe if you're using a transverter, you want transmit coverage
outside of the band -- so you can cover more of the Microwave/VHF band?

The 847 does not allow true dual band operation. It does allow full duplex operation for satallite.

I dont work Satallites (yet) Im using it as an HF 2, 4 6 FM & SSB rig. Its working out fine for me.

I have to ask myself - If I was considering operating Sat. or HF why I would choose another radio?

Hi group

The MB3756 regulator in my rig seems to be faulty. This part is made by Fujitsu and the web tells me its a voltage regulater.

I cant get a replacement in UK and I want to knock up something to replace it.

Has anyone got a data sheet, or at least a pinout please?

TIA
Martin

I couldn't figure it out, so I bought the ADMS-1D software.
Works great. FYI, when it's done right, both the "+" and "-" repeater
shift indicators are on.

I did see a post in the AMSAT archives (sorry, I can't find it), that
alleged that it was documented in the manual and involved pressing the PTT
button while standing on your head and shouting, "GET IN, GET IN" or
something like that.

I have owned both radios, but I liked the 737a better. It seemed to have a better receiver, but other than that there were about the same. There were some other upgrades to the radio besides the vox, but I can't remember what they were. I have a 746 now.

I have the Comet 501 and it is about as close to a dummy load as you can get
and still transmit a signal. Don't waste your money on one is my advice.
If you do want to waste your money I will sell you mine for $15. That's half
the price of a new one.

Generally, it is much better to install a 12VDC relay with large
(20-30A) contacts. Use the "switched" DC from your fuse block to
energize the relay. When energized, the relay contacts connect fused
battery power (directly from the battery through its own fuse block)
to the radio's DC power lead.

This gives you a direct, low source impedance DC connection to the
radio, but switched with the automobile's key switch.

Source record: 145739

1. Save the receive freq to memory as you would any simplex freq.

2. go to the VFO and dial or punch up the TX freq.

3. press and hold the FW key. When the memory number starts to flash dial up the chan. you saved the recieve freq on.

4 after performing step 3, while the memory number is still flashing, press and hold the PTT button while pressing the FW key.

5 go back in to memory the saved memories (out of VFO) and check it out. the +- repeater shift indicators should both be on.

6. clap your hands together 5 times to congrabulate yourself.

This procedure is outlined on page 26 of the users manual under "custom TX offset"

Tracker

P.S. - this procedure is helpful if your rig is moded to tx out of band and you don't want to be sitting on the PTT while you are tuned to the local police freq. Just save the recieve freq as you would normaly and use the above procedure to save a freq on the TX side that the radio won't TX on (ie. 590.000MHz)

I don't think Yaesu intended the primary market target for the FT-847 as a mobile rig where the IC-706MKII primary market is the mobile operator. Although, a square peg will fit in a round hole if the round hole is big enough.

HI Chris OM,

I highly recommend an older transceiver for starters (also keepers).
My suggestion is the TS820 or TS820S. These rigs are simple, rugged,
easy to use, have built-in AC supply, are repairable, and also have FSK
capability (FSK was, inexplicably, deleted in the TS830S, TS430S,
TS440S). They work well for most all modes including RTTY and ARQ modes
such as Amtor and Pactor. I've been using mine most every day for 18
years now, exclusively CW and FSK, and I wouldn't part with it. Later,
when (if?) you ever want to sell it, it will be worth about what you
paid for it. $400 is a ballpark price today, and hasn't changed in the
last decade or so.
Good luck, keep it simple!
73,
Don W6JL

In my Mitsubishi Microwave and RF Products Selector Guide (v 4.0) they
list the
M57735 module, listed for SSB from 50 to 54 MHz, 19 watts out, 12.5
VDC...

All I have are American and Canadian addresses for Mitsu, if all else
fails:
408-730-5900 (HQ in sunnyvale, California). I have yet to find a
website.

Good Luck,

> be seriously harmed without the ability to receive out-of-band?

As usual, yes ham radio will suffer from the ability. Or rather those hams that are mars and cap certified will. Oh I know, someone will make special equipment for them, but at what price. Much has been done in the past for our service personel by the MARS program. It exists because of the lower cost of modifying a ham rig to operate in their frequency range.

Another aspect that seems to be overlooked by many here is the fact that a lot of public service work in the field of weather and search and rescue is much better done because of the ability of the ham transciever to recieve out of band in the public service frequencies. I have done too much public service and weather spotting to listen to anybody tell me that it is of no value to be able to monitor those frequencies. Or that the public servants out there using those frequencies should have to "make secret" any of their conversations by making them ilegal to listen to. Any confidential or sensitive traffic can be sent via the KDT system wich is digitally encoded or via a scrambled voice link. As far as cel phones and portable phones go, any fool that would say in clear language any thing that they do not want heard by any other folks should only do so in a secured, face to face situation, not over a radio or wire link....

So let us not be so hasty to demand political correctness for our representatives and to say that we should not be linked to the scanner listener. Which by the way can be any of over 2/3 of the Joe Hams out there. Show me more ham shacks that DO NOT contain a scanner than those that do.... I think that you would be very hard pressed to do so. No, I for one am not ready to give up yet one more freedom for the politicaly correct crowd. And I am a supporter and member of the ARRL and do believe that they should back us on that issue.

Bob:

Not really... however, I remember a third-party, short-wave converter that you could piggy-back on top of the IC-R7000, and then it connected inline with the antenna connection. As I recall, it worked, but not as well as a dedicated short-wave receiver.

2824. CORRECTION: Send STRAW POLL Discussion to rec.radio.amateur.misc

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-27 00:00:00 UTC
From: pschleck@novia.net
Message-ID: <6i32lhioj1@newscene.newscene.com>
Source record: 145753
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment

Based on thoughtful feedback from Kathy Pascoe (kpascoe@ford.com) and Yves Belleveuille (yan@storm.ca) on news.groups, I've come to the conclusion that rec.radio.amateur.misc would be a better followup target for this straw poll discussion.

I sent the original copy (complete with exact headers) to several experts, including past newsgroup proponents and our volunteer UVV votetaker for review a week prior to posting, but unfortunately no one (including me) noticed that a followup to news.groups might generate controversy. As helpful as the standard FAQ documents on newsgroup creation were, they weren't (in my opinion, at least) sufficiently clear regarding the inadvisability of conducting informal meta-discussion on news.groups. It's also sometimes hard to figure out what's appropriate on what newsgroup by observing others. According to Kathy and Yves, news.groups is an appropriate target for discussion in response to a formal Usenet Request for Discussion (RFD), but informal pre-RFD discussion (including straw polls) should probably be conducted in an appropriate home newsgroup.

Since more than one person has offered this feedback, and in a thoughtful and convincing manner, I'm posting this correction, and asking that followup discussion on this straw poll (which should commence, as scheduled, in 30 days time), go to rec.radio.amateur.misc.

2825. KENWOOD TM-G707A vs. TM-V7A Mobile Radios

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-27 00:00:00 UTC
From: Bernie Kopp KB9KEF <bkopp@execpc.com>
Message-ID: <6i2ui8$8qu@newsops.execpc.com>
Source record: 145754
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,

After researching the Kenwood links at,

http://www.kenwoodcorp.com and http://www.kenwood.net/amateur

I still don't know what all the features of the TM-G707A are and how the two radios cited above differ from each other!

At this time, both radios are very close in price (about $450 - $500) depending on coupons, promotions and vendor).

As for the TM-V7A, has anyone else noticed that the viewing angle for this radio's display is much more critical than your typical flat amber/black display? At the AES SuperFest I saw about six Kenwood mobile transceivers lined up next to each other and the TM-V7A's display could not be viewed beyond a 30 to 45 degree angle.

Yaesu FT8100R's are down to $499.00 now....Hmmmmmmm? Decisions, Decisions......

Thank you for the group's consideration.

Hi Chris;

Just wanted to let you know that I think that you may be
confused about mode k and t on the birds. The last time I checked mode k
was 21 mhz up and 29 mhz down. Mode t is 21 mhz up and 145 mhz down. As
to the question of will the ft-847 allow for full duplex operation in
mode k 15 meters to 10 meters is a good question and since my 847 is
supposed to ship today, maybe I will know more by the end of the weak. I
have worked rs-12 in both mode kt and mode k. It sure had a super
downlink when it was in mode kt and you listened to the 2 meter downlink
compared to the 10 meter downlink.

Yes, they had a stand with no PTT, and one with PTT. It is identical,
except that it had a big button in the middle. I got one brand new at
a hamfest a few years back that I am going to use with my 664.
Let me know if you need the model, and I will take a look on the box.

You are absolutely correct about the "supporting" membership. I too like the QST magazine. It has great ads, some good articles, and some timely information about our hobby.

I do not use the ARRL equipment insurance program (read the fine print sometime and you will see why) and I do not care for their "representation" of my needs and/or desires in amateur radio. I think they have become a "legend in their own minds" and are attempting to throw even more weight around.

I personally consider the ARRL directly responsible for much of the decline of amateur radio enthusiasm due to their Incentive Licensing SNAFU of many years ago and their current refusal to acknowledge that amateur radio is modernizing - in spite of the ARRL's efforts to prevent it.

If you care about how these groups are going, you had better pay attention to a SMALL group that want to have it their way. I am tired of these people trying to tell us what we should or should not say in a message or group. IF YOU DON'T LIKE WHAT'S IN THE GROUP.....YOU DON'T HAVE TO READ IT.

If you want moderated groups....then bring them into existance and be done with it.

All readers.....be prepared to let people you don't even know tell you what you should and should not be able to do in these groups.

Forewarned is forearmed.

I started getting the RFP and quickly unsubscribed.....what a waste of time to try and read it. Only one day and over 20 messages from the same individual......I love these "For your own good." attempts.

2841. antron 99 to 10 meters

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-27 00:00:00 UTC
From: -=KA0SSF=- <jmackey@usa.net>
Message-ID: <3543F04A.AED@usa.net>
Source record: 145770
Cross-posted to: rec.radio.amateur.equipment,REC.RADIO.AMATEUR.ANTENNA

I have an Antron 99 that plays well with flat SWR on CB & on
the bottom of 10 meters, but I can't get an acceptable SWR to go
on 29.500 MHz for 10 meter FM. On 29.5 Mhz I get about 2.5 or 3 to
1 SWR.

A friend told me that the Antron 99 won't play on the top of 10 meters,
even with cutting.

Does anyone else know about this?

thanks

2842. Re: what to buy FT-847 or IC 746???

Source record: 145771

Depends what you want to do...If you want to work thru satellites such as P3D (when it goes up) then a IC756 is no good to you (without a seperate 70CM SSB rig).
The FT847 joins a unique family of rigs such as the IC820/821, the FT736 and the Kenwood TS790 which are intended for full duplex satellite operation. I have owned a TS870 and now own a IC820; the FT847 looks very promising from the brochure and including a complete HF rig plus DSP etc makes it unique

2845. FT-847 What can it do?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-27 00:00:00 UTC
From: C B Muir <cmuir@ihug.co.nz>
Message-ID: <01bd7190$6e5a8fa0$bbeed4cf@p90>
Source record: 145774

I am a satellite fan currently using an Icom 820 dual bander. (Have owned a TS 790).

The FT-847 looks good as it covers the HF bands also.

What I want to know is how flexible is it in dual band mode? i.e. We know it will work modes B, J, A, & T. However, no mention of mode K (tx 21 rx 145). Also no mention of whether it will allow listening on any HF band whilst transmitting on 144 or 440 or permit monitoring 144 or 440 whilst operating on HF? If it can do these things then it is truly flexible.

Anyone know the answers?

73, Chris Muir ZL1BOE

Message-ID: <6i11ln$sg@bgtnsc02.worldnet.att.net>
Source record: 145776

I have an Electrovice 664 microphone with desk stand which I am pulling out of storage and wish to put back into use.

The desk stand has a slide switch which takes the mic element in/out of circuit, but no push-to-talk.

Was a PTT stand ever made (anyone got one)?

Is there an alternate switch available which replaces the standard slide switch....perhaps which depresses for momentary PTT, and which also locks?

Any help/suggestions greatly appreciated!

Thanks and 73,

Dan

2848. Info Needed on Mitsubishi RF PA Modules

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-27 00:00:00 UTC
From: Rodney S Baker <vk5ztv@senet.com.au>
Message-ID: <354414B7.6B79@senet.com.au>
Source record: 145777
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.equipment,aus.radio.amateur

Greetings. I am trying to find data sheets on the Mitsubishi RF PA "block" modules. I believe that Mitsubishi Semiconductor make one which covers the 6m amateur band (50-54MHz) but I have been unable to locate any information on any web sites I've looked at so far. Searching Alta Vista has produced no joy.

I need this info to complete the conversion of a 70MHz commercial radio (Kyodo/Sawtron KG107) to 6m. I have the RX working very well but it has a Mullard/Philips BGY32 module in the PA which only covers 60-74MHz.

Any information would be greatly appreciated. If someone can point me to an online data source that would be great - otherwise a hard copy by snail mail (or even a readable scanned copy via email) would be of great assistance.

Thanks in advance,

Rodney Baker VK5ZTV

2850. ADMS Yaesu VX-1 Problems

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-27 00:00:00 UTC
From: ron@zl2ol.wn.planet.gen.nz
Message-ID: <1919rem62.alamito@zl2ol.wn.planet.gen.nz>
Source record: 145779
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I'm writing in respect to my ADMS software / Cable interface which I cant get to function properly ie it wont download from my Yaesu VX-1 the
data to create a template.

The carton label say's its a 97 Ver 4.0. It has enclosed a 3 1/2" floppy with files Ver 1.03 (as listed on the helpfile) & V1197 on the disk label. I trust this ID's the package sufficiently.

The VX-1 wont talk to my PC serial port which is set for Com 2. The software runs OK and tells me to create a template, I turn the VX-1 on while holding the FW to switch into Clone mode, I then press the DWN key & no data is tranfered over to my PC, the software remains in receive mode doing nothing, no error messages are reported except when you move the four
pin mic connector in & out of the socket on the VX-1 when it reports bad data, I think this is just noise created by the socket / plug make & break connection.

I've checked the cable connections to the PC & all is fine, the adapter cable to the VX-1 (four pin) is plugged in all the way and the computer comm 2 port is working fine to another data terminal (set for Comm 2).

I'm at a loss as to whats happening, it appears that the cable or the VX-1 is at fault, as the PC works fine on the other software.

The PC is a Pent 150, 32MB RAM etc etc running W95 4.00.950, the mouse is on Comm 1, the ADMS on Comm 2 & my telephone modem (internal) is set for Comm 4. Everything else works fine except the ADMS.

Has anyone any help to offer, I'm at my witts end just now.

Hi Kevin,
I used for 3 months SRH-805. Performance poor of course, but what a comfort.
For repeater and short distance QSO it's perfect solution.
I haven't tried Comet yet, but it seems that these two are almost the same.

Hello there,

I purchased my Yaesu FT-50r back in 96' and can't say enough good about it...its been a wonderful, tough little dual bander. I have dropped it in a half inch of water, soaked the speaker, keypad, and display...30 minutes it was dryed and I was back up and running without a flaw in performance. I once dropped the FT-50r on some old concrete, cringing, I picked up the radio which now had pebble inpressions on the protective sheath. Nothing, it still operates like a champ. The HT stays in my truck at 100+ degrees in the summer and in the negitve numbers in the winter....people comment on how clean my audio is as and the speaker mike is about the size of two quaters end to end...

I can safely say that if you can't install that unit, then you
shouldn't own the radio... I took me about 10 minutes, but most of
that time was just spent working out the logistics of exactly where it
would go, etc, what plug to remove, and plug back in... and doing
everything without rushing.

I built an iambic paddle that operates just like a Bencher from plans in October, 1982 QST (page 33). It was a bit of work, but turned out well. Almost all of it is made from plexiglas, which is easier to work with than metal. I put mine on a wood base, instead of plexiglas, so that I can drill some holes in it and add some lead weight for stability. If you don't have access to QST back issues, let me know and I will send you a copy.

As far as an electronic keyer for the paddle (if your rig doesn't have one, there are several available on the internet that are based in PIC microprocessor chips. One is at http://www.frontiernet.net/~embres/. I have information on another one at work and can get it to you if needed. These make very simple, but powerful keyers since they use an 8 pin dip processor IC. The circuit boards are around one inch square.

Source record: 145794

Hi all:
I am gonna buy a new rig finally, and am really
confused. The icom756 has my vote but the price was 1999
and I'm now told it went to 23 or 2400???why? no longer
in my price class(2000 or less)
Leaving the ft-920(anyone have one,comments,options
needed like am/fm board or narrow cw filters needed) the price
is more reasonable at 1699.
Also considering the ts-570d (don't need 6 meters)
but again the latest qst shows an upgrade(looks the same to
me)to 570g for the latest model and of course an accompanying
price increase making it cost as much as the yaesu.
The computer systems cost less each month for more,
so whats going on here with the prices?? I would very
much appreciate some guidance on what to do. Also should a
person haggle with the first price given by the big mailorder
guys like hro/aes////??
Thanks and please reply directly as I don't think this
qualifies as ham equip for sale or swap.....73 Jim kw3u

Source record: 145795

Hi all:
I am gonna buy a new rig finally, and am really
confused. The icom756 has my vote but the price was 1999
and I'm now told it went to 23 or 2400???why? no longer
in my price class(2000 or less)
Leaving the ft-920(anyone have one,comments,options
needed like am/fm board or narrow cw filters needed) the price
is more reasonable at 1699.
Also considering the ts-570d (don't need 6 meters)
but again the latest qst shows an upgrade(looks the same to
me)to 570g for the latest model and of course an accompanying
price increase making it cost as much as the yaesu.
The computer systems cost less each month for more,
so whats going on here with the prices?? I would very
much appreciate some guidance on what to do. Also should a
person haggle with the first price given by the big mailorder
guys like hro/aes////??
Thanks and please reply directly as I don't think this
qualifies as ham equip for sale or swap.....73 Jim kw3u

2867. WTB or deal ICOM 211 sn: above 2600

Newsgroup: rec.radio.amateur.equipment

Hello,

I am looking for a 211 with a serial number above 2600, working or not, price will depend on condition (working or not) and accessories that it has. Willing to pay a good price. (not looking for a freebee) I am in the service bus, so we could trade repair work also, very open minded to offers.

For sale Icom 728 HF in excellent condition. This is a one owner rig with less than 10 hours of air time on it. Includes box, manual, and microphone. Here are the basic specs.

TX : 1.8, 3.5, 7, 10, 14, 18, 21 ,28 MHz RX :30 KHz- 30 MHz

RF Output Power SSB,CW,FM*,AM* : 10-100 W AM : 10-40 W

Band stacking register

CW semi break-in

Noise blanker

10 Hz frequency readout

RIT

Dual VFO's with split capability

DDS system

Versatile scan functions

An optional UI-7 is required for AM Tx and FM Tx/Rx this is not included in the package.

Price $550 plus shipping.

If interested please reply via email.

Thanks in advance

>> That is the main reason I dropped my membership in the ARRL.
>> Granted some of their "ventures" are valid, and I applaud them, but
>> IMHO I feel they've become too political for my tastes.

I really have to feel for the ARRL directors... (disclaimer: I personally know one of them) There just doesn't seem to be anything the League can do right.

"You supported no-code! You're going to turn ham radio into CB! I'm quitting the ARRL!"

"You're opposed to no-code HF! You're a bunch of senile fuddy-duddies! I'm quitting the ARRL!"

"The FCC won't let me use my ham rig on my commercial frequency, and you won't stop them! I'm quitting the ARRL!"

If you were unhappy with the NRA for their failure to stop the assault-weapons ban, would you quit the NRA? If so, wouldn't the NRA's loss of your dues go to *weaken* their ability to overturn the ban and fight future gun laws? Isn't it pretty much the same way with the League?

Bill, does the 847 have a removeable front panel? If not, it would
never do in my (small car) mobile environment; 706MkII fits in very
well.

Are you suggesting that it should magically appear in those radios already purchased, that they should give it away, or they should put it in new radios and increase the price?

Since the display characters for DSP menu were already in the radio, my guess is that thy did intend to put it in the radios originally, had some development problems, and decided NOT to delay shipment of 706MkII. If so, I'm glad, because I've had very good use of it sans DSP.

IMHO the DSP module is well worth what I paid for it. If it is not to you, don't buy it.

QST is getting more timely with their reviews. For example, the 706MkII review (Jan 98 issue) was within 8-9 months of release of the radio.

Personally, unless I have a real need to buy fast (I did in the case of the 706MkII: New car, long trip) or have a chance to play with a radio extensively in a real environment (read: friend's shack, not store), I wait for a QST review.

QST reviews seem right on in most cases. They don't hide problems to please advertisers; some of the other mags never saw a piece of equipment they didn't love!

My 2 cents (or less!) worth.

2875. Kenwood TH-215A Questions - Anyone have one???

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-27 00:00:00 UTC
From: martyt@pobox.com
Message-ID: <35449955.8258134@news.supernews.net>
Source record: 145804

I've got a Kenwood TH-215A H/T that was given to me without a manual... I've figured out what most of the buttons do, but there's one that has me stumped: It's labeled "Save" and when you press it, the LCD display says "Save" and if you press it again, it says "Auto Save". But I can't tell that it does anything. I'm guessing it's got something to do with saving power or something like that.

If I press Function+Save, I get a number from 1 to 9 displayed, which I can change using the up/down buttons. But I still don't know what it does.

Can anyone offer some clues here?

Thanks!

I have one, and I like it. It is limited. I live close to a repeater, and it works very well. I like the 440 version better. folding rubber antenna, DJ-S11 has a metal one, and is retractable, so it's not as easy to use. The radio does have good battery life. And as far as listening, they do pretty good. It doesn't compare to a normal size HT, antenna is fixed, and at 340mW, you better be fairly close. Within their limitations, they are a decent little radio, can't beat the price $88. I can listen to repeaters in the valley, and then go turn on the base station if I need to talk. Hope this helps, KF6ATH Zac

Hi, Doug,

The issue I have with the ARRL (and I am a member) is that they spend so much time beating their chests about how good they are, and in the case of HR2369, they did *nothing*! Oh, sure, they made a mild squeak of protest that hams shouldn't lose their ability to use rigs with OOB receive, but it was too little, too late. It seems that they never thought that the ham and scanner community overlap, and that having scanners as a commodity item keeps prices down.

Now, it looks like their protest is in vain: What happens wheen this miserable law passes and half the product lines of the Big Three are pulled from the shelves?

As for my membership, well, I just joined recently to see if there's *ANY* interest in what members think. I have my suspicions, but I wanted to see for myself.

It is a battery saver as you thought.

The save button has 3 positions, nothing in display = off, "save" in
display = in save mode(2 seconds after squelch closes), "auto-save" in
display = save mode 1 minute after last key operation or squelch closes.

The F-Save sequence determine the ratio of on to off time. It increments
in .3 sec slices and a 1-1 is .3 on/.3 off, up to a 1-9 which is .3
on/2.7 sec off.

Are HR2369/ECPA really issues for the ARRL? Will amateur radio really
be seriously harmed without the ability to receive out-of-band? The
Gingrich incident left powerful members of both parties with a rather
poor impression (unjustified IMHO, but real..) of scanner users as
"peeping Toms". Amateur radio depends on the cooperation of the
federal government for its existence - really, much more than the
scanning community does. We can't afford to be too tightly linked
together. Really, if the scanning community wants to be defended in
Washington, it needs to form (and support) its own lobbying
organization.

Not that I think HR2369/ECPA are good ideas, or that Washington's
impression of scannists is accurate. But one must be realistic.

>As for my membership, well, I just joined recently to see if there's *ANY*
>interest in what members think. I have my suspicions, but I wanted
>to see for myself.

The League sure isn't perfect. Like any large organization, it can
take some time to get turned around when opinions change. And like
any large organization, sometimes it has to comprimise between
competing factions. It's certainly a whole lot more responsive than
government, and it's provided for U.S. amateurs a set of privileges
unmatched in most other countries.

: Neither. Both of the rigs you mentioned haven't been on the market
: for more than a year. This is the first criterion one should look at
: when purchasing HF equipment. The other problem is there is no
: QST review for either rig. Often times, the rig will undergo a few
: revisions before QST ends up reviewing it. The units that come off
: the line at the start, are almost never as good as the
: ones they're producing a year from that point.

: -Mike

I agree with the part about waiting until the rig
has been on the market a while.....it seems most (all?) of
the mfgs have experienced problems on early production units,
even to the point of bringing out a second version.
So waiting a while may be a good way to go.

But waiting for the QST review? You're joking, right? :-)

: I would appreciate any info to compare the ICOM IC-746 and YAESU FT-847...

: What would you buy!!!

: 73 Dennis WA1HOG

Dennis,
I've been looking at these two rigs as well... the main tradeoffs
for me boil down to:
1. 100 Watts on 2M (IC 746) vs 50 W (FT 847)
2. No Watts on 70 cm (IC 746) vs 50 W (FT 847)
3. Internal HF antenna tuner on IC 746 (none or external on FT 847)
4. Full duplex satellite operation on FT 847.

My biases are towards VHF and above, so I tend to value the
Yaesu rig higher....except for that 100 Watts on 2M would
be nice.

This is strictly a "data sheet" analysis...I have not used either
radio.

Source record: 145862

post with permission by kk7ho
From: k1gkm@juno.com (RICHARD A. KLEPADLO)

A POMPOUS ASS WITH A CRUSADER LIKE OBSESSION AS TO HOW THE AMERICAN PEOPLE SHOULD SET THERE MORALS, CONDUCT THEIR AFFAIRS, AND LIVE THEIR LIVES.

HIS EGO IS SO GREAT THAT HE BELIEVES THAT ONLY HE AND A SMALL GROUP OF LIKE MINDED FOLLOWERS HAVE THE WISDOM AND INSIGHT TO "ENLIGHTEN" THE PUBLIC TO THE "CORRECT" WAY OF "INTERPRETING" THE ACTIONS OF GOVERNMENT AND THE MEDIA. TO THIS END, HE MOUNTS HIS WEEKLY "LIBERTY NET CRUSADE" WITH ALL THE FANATICISM AND CLOSED MINDED INTOLERANCE OF THE ANCIENT CRUSADERS.

UNFORTUNATELY, HIS COMPULSION TO "ENLIGHTEN" AND "CORRECT" DOES NOT END IN THE POLITICAL ARENA. HE FEELS HE MUST PASS JUDGEMENT IN ALL AREAS OF AMERICAN LIFE INCLUDING THOSE AREAS OF PRIVATE AND PERSONAL CHOICE WHERE HIS NOSE HAS NO BUSINESS BEING.

FOR EXAMPLE, MENTION ANYTHING INTERRACIAL AND ESPECIALLY INTERRACIAL MARRIAGE, AND LISTEN TO HIM GO INTO A APOPLECTIC RAGE BORDERING ON STROKE. -- WELL HERE'S A NEWS FLASH VICTOR -- WITH ABOUT SIX THOUSAND MILLION HUMANS IN THIS WORLD, IT IS INEVITABLE THAT YOUNG PEOPLE OF DIFFERENT RACES WILL MEET AND MARRY. THIS IS HAPPENING WITH GEOMETRIC PROGRESSION AND, CAN NO MORE BE STOPPED THAN STOPPING THE FRESH WATER OF RAIN FROM MIXING WITH THE SALT WATER OF THE SEAS. THE TABOOS AGAINST RACE MIXING ARE ARTIFICIAL AND MAN MADE. -- NATURE HAS NO SUCH RESTRICTION. AND, IN THE END NATURE WILL DO AS SHE DAMN WELL PLEASES.

THE YOUTH OF TODAY PLACE LITTLE STOCK IN THE RESTRICTIONS OF OLD SCHOOL RACIAL SEPARATION. HAVING GROWN UP IN AN INTERGRATED COUNTRY, THEY ARE MORE CONCERNED WITH THE PERSONALITY, CHARACTER, AND COMMON INTERESTS OF A POTENTIAL MATE THAN IN GENETIC ANCESTRY.

I HAVE SEEN SOME OF THE MOST BEAUTIFUL CHILDREN IN THE WORLD RESULT FROM SUCH UNIONS. --- BUT, HOW COULD THIS BE ? HOW COULD SUCH BEAUTY RESULT FROM THE "SAD MISTAKE" YOU CONDEMN RACE MIXING TO BE ? SURELY, A MAN WHO CAN AGREE WITH EINSTEIN SOME OF THE TIME; CAN AGREE WITH NATURE SOME OF THE TIME !

I WISH YOU LONG LIFE VICTOR; AT LEAST LONG ENOUGH TO CHOKE ON THE BITTER PILL OF BIGOTRY YOU HAVE MADE FOR YOURSELF.

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.cb,rec.radio.amateur.equipment

Hello out there,

I have an old Palomar 300A amplifier and I need some parts for it to get it going. It has been in the closet for years and all I need is a junker 300A that has the plug in relay board. This board has the receiver amplifier and the switching circuit. I posted that article and got a junker and would you know that is has a different board in it. Also would you know I got to working haha. But it still leaves the old one I have sitting here to be repaired.
Anybody having one please email me at bierbier@bellsouth.net.
Remember, it is the one with the plug in board I need. Thanks!!!!

73's

Gary

I've been getting catalogs from an outfit in florida called
"marlin p jones" - a surplus parts dealer - but I've lost
my copy and I need to find them. As I recall they have a
web page but I can't track it down.

If you know their phone # or URL could you drop me an e-mail?

Tnx,

You can still get a photocopy manual from the Heathkit Parts Department at 616-925-5899. They charge based on the number of pages to be copied and they are expensive. If you are lucky another owner will run you a copy for less. Check their web page at www.heathkit.com for links to other resources.

>
>73's
>Robin'
>
OK Robin,

As I see it there is only two solutions left, viz the cheap one and a little more costly one.

You can use RG 174 cable (surely obtainable from RS-Components in UK or RS-Radio-Parts in Denmark, whereever you are located) and then solder it directly either to the prevailing sockets or remove them and solder directly to the PCB. You can also with advatage use the silver-braided, teflon-insulated this coaxcable (appr. 3-4 mm&#65533;) normaly used in cellular phones.

The more expensive way will be to replace the existing socket with new standard coaxsockets (goldplated) and solderable connectors for the above mentioned cable types (eventually in one end of the cable only just to make it detatchable from one PCB to another).

I'm quite sure that for RF (not VHF or UHF) the cheapest solution will prove quite satisfactorily.

Regards
OZ1GB, Karsten

2899. HF Rig Opinions

Newsgroup: rec.radio.amateur.equipment

From: bren.doreck@ac.COM
Message-ID: <862565F4.0043756D.00@aamta.compuserve.net>
Source record: 145572

Greetings to the group.

I am finally getting around to upgrading my license and am looking for an HF rig. There are a couple that I am considering: Kenwood TS-430, TS-450, and Icom 737A. I have some experience with the 430 and like the size. It is a pretty stable rig that had few problems when it first came out. I size is a plus since I would like it for mobile operation later.

Any opinions on the other two would be appreciated.

I'm looking for a 2 meter SSB rig. I'd like to take it backpacking, so portability is a concern. I've look at the FT-290, but I can't bring myself to spend $650 on it. Suggestions for a comercially made rig, plans, or a kit would be greatly appreciated! Thanks.

It's pretty good. I am not to active on HF, however it was super
easy to modify and open up 1.6-54 mhz. I think I could use a little
more power on VHF 2m, but over, worth the buy.

I'm not sure that wold even be legal... given that the amp had not been
type certified for 6 meter operation... you would more than likely have
a LARGE problem with IMD due to the CHEAP nature of CB amps...Jordan...

I have a 89 Toyota pickup and had the same problem with my 706. What I did, besides everything that Gary has said in another message, was run a ground strap from my antenna base (Outbacker) to a bolt on the radiator (scrape the paint off really well) and also one to the engine mount. I used the shield from a piece of 213 for the strap. I had smaller stuff before and it did nothing. I also have straps on my hood and doors. Noise level droped to around S1 without the pre-amp on.

Think Ground ;)

Good luck!

TS-450 is much better in all respects than the TS-430. Used TS-440SAT
would alwo be better than the TS-430, but 450 is best of the tree, IMHO.

Th 430 is not set up to use the narrow (CW) filter on data modes; needs
a mod. 440 & 450 both can be had with internal auto antenna tuner.

If you like the 430, you would like either of the newer rigs better,
assuming you can get a good (unabused) one.

Only Icom here is a 706MkII, so I cannot comment on the other rig you
mentioned.

I need the Follwing tubes for my Hallicrafters S-120.
New or used is fine, but would prefer new if possible. RCA or Sylvania is
ok

12BE6, 12BA6, 12AV6 and a 50C5.

2925. Re: DX-70 mobile noise problem

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-28 00:00:00 UTC
From: "Richard A. Ferguson" <raferguson@worldnet.att.net>
Message-ID: <6i5ts4$fdo@bgtnsc03.worldnet.att.net>
Source record: 145598

HF MOBILE NOISE ELIMINATION

In my experience, there are three parts to the job of installing HF mobile in a vehicle: Installing the radio, installing the antenna, and suppressing noise. Of the three, suppressing noise is probably the hardest.

The first question is what kind of noise you are experiencing. If it sounds like a popping noise, and gets louder when you accelerate, it is probably ignition noise. If it is a hash type noise, it is probably an electric motor. The engine fans on my Tercel were very bad, but only ran in traffic, so I just lived with it. I was told that .001uf caps, short leads, from the motor to ground would help, but never did it. Some electric fuel pumps can be very noisy.

One test to see if the noise is coming from the power cable or the antenna is to disconnect the antenna. If you still have noise, work on the power cable. If the noise goes away, the power is OK, focus on suppressing noise at the source. If you connect the radio power cable directly to the battery, you will probably not experience noise on the power cable. (Don't forget to fuse both plus and minus at the battery for safety). Heavy cable is advisable; I would not use anything smaller than 12 ga, and some people use welding cable.

I assume here that you have broad-band noise across various bands. If you have a single frequency birdie, you probably have noise from the computer crystal.

You might check to be sure that you have resistor plugs and wires before starting more serious work. Also, be sure that your noise blanker is on, although most radios do not have super-effective noise blankers.

On a 1979 Honda Civic with points, I used resistor plugs and wires, which solved the problem, but meant that I had to change the points every 5000 miles or so, as the ignition system was designed for resistor wires only, and if the ignition system was not perfect, the car ran poorly.

On a 1985 Toyota Tercel, I had tremendous luck suppressing ignition noise by buying heavy copper tubular braid, and slipping it over the spark plug wires. I built a copper box that covered most of the distributor, bonded the braid to the box, and then bonded the box to the block, keeping the wires short. This was a day and night improvement, and I never felt the need to do any more ignition noise suppression.

On a 1996 Subaru Legacy, I again built a copper box, and bought more
tubular braid. However, I only got an improvement of about 2 S-units.
I needed more, especially on 40 meters, so I ran two ground wires
from the exhaust pipe to the chassis. This was probably worth more
than 2 S-units, and finished the job to my satisfaction.

If you are systematic, you should be able to identify the source of
any problems and correct them.

A couple of other notes on HF mobile installations. Don Johnson,
W6AAQ wrote the book, 40+5 YEARS OF HF MOBILEERING. Try to get
a copy. I use the Hustler antenna system, and find it adequate
except on 75 m. If you plan to operate 75m, consider a WB5TYD
Texas Bug Catcher or a Screwdriver antenna. Unless you have an
automatic or remote tuning system, the antenna bandwidth on 75m
will probably be only about 50kc or so. I have never invested the
time and effort required to achieve a satisfactory 75m installation.

Good luck

You might note that COM2: and COM4: use the same IRQ -- that often
causes
problems with other communications software... I suggest removing the
MODEM
for a test, that is the only way to quickly tell if the rig, software
and
cable are OK.

I suspect the cable, rig and software are OK, just a bit touchy!

You will also want to upgrade the software, V1.03 has bugs download the
patch
from RT's site: http://www.rtsars.com

I just purchased the software and cable ... after some start up
problems, and
the bugs in the version 1.03, I finally have it up and running.

The first thing to do for ignition noise is to bond the hood in a
couple places with ground straps.. THe hinges don't provide a good
ground..

I assume you have suppression wiring (carbon) and it is in good
shape??

> Does the Collins filter provide decent skirts and a smoother sound...
> ie. less ringing? Why have they gone to these mechanical filters?
>

Well, the Yaesu adverts (And the AOR receiver that also uses them)
put the name Collins in loud print, but do not specify any other
advantage, so it looks like they see the chief benefit in the reputation
attached to the name of the filter manufacturer.

Collins are very competent filter makers indeed, though they are
more dedicated to carefully optimised communications channels rather
than hifi sound. Some early mech filters had intermod effects from their
transducers, xtal filters have similar problems. There are plenty more
factors than skirt shape and ringing, I'm afraid.

Cheers,
David GM4ZNX

Burt:

I'm a gun owner, and I've never killed a child (or anyone else) in my
whole life. Where do you get this "gun owners kill children" crap? It
should read "violent, evil, criminally-minded people kill children,
occasionally using guns." Its not the gun's fault. A gun is an inaminate
object which requires a responsible human agency to make it work.
Get it right.

2947. DX-70 mobile noise problem

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-28 00:00:00 UTC
From: Dan Newby <newbyd@ipix.com>
Message-ID: <3545D29E.3465@ipix.com>
Source record: 145625

I have installed a Bug Catcher and a Alinco DX-70 in my 94 Toyota pickup. The problem I have is a tremendous amount of noise is being generated when the engine is running. When the engine is off, the noise level will be S0 to S2, but when the engine is on, it will be S6 at idle, and S9 while rpms are at highway driving speeds. The noise sounds like ignition type noise, the popping that speeds up with the engine. The noise blanker doesn't help at all, it just changes the popping to a hash that is the same strength.

I've already tried the following:

1) Grounding the DX-70 directly to the cab.
2) Installed a filter on the DC power leads.
3) Installed resistor type plugs.
4) Grounded the exhaust pipe to the chassis and directly to the antenna mount, which is on the rear step bumper.

None of these things had any effect at all.

Has anyone else had this problem before? What did you do to solve it? Is the noise blanker in the DX-70 just no good?

Also, in my installation, the power is taken directly from the battery as is generally supposed to be.

Thanks for any help.

Hi i have an old radio and wanted to see if I could use it for amateur
work. I know only that it is an RCA Model # CHLL4MMB
Xmiter Data ct3004
Rcvr Data M1-559455
I believe it was used in a farmers truck or tractor.
It has no antenna with it. uses crystals. can I get new crystals for
it to use on say 2 meter or 70 cm. maby for the local repeater. And
if so could some one give me an idea on what type of crystal it takes
and where to get one. thanks

Well, in this case, LENGTH *does* matter, Kevin.

For hitting a very local repeater - or working simplex during an event, I suppose you can get away with one of the mini antennas. Just do not expect too much from them.

An alternative is the SMA-503 from Comet. Overall length is about nine inches, but the whip is made from "plasticized piano wire." Very flexible, very un-noticeable.

Well, when the time comes to build my house, I am going to
find some old toilets and put them in my house. It takes 2
or 3 flushes of those politically correct toilets before an
"act of Congress" is completely flushed versus just 1 simple
flush with an old commode.

>any frequencies available.

There's a serious dilemna here. It's true, anyone may legally
transmit on any available frequency in a life-or-death emergency.
That regulation was drafted in a time when police didn't have two-way
radio and the non-amateur frequency in question was generally a HF
marine or point-to-point channel.

As long as transmission on police frequencies by civilians is a rare
(2-3 incidents a year) event, it isn't a big deal. I think police are
scared it could easily become something much larger. There must be
dozens of legitimately life-threatening situations every day in a
major city. Police radio procedure is very different from amateur
procedure, and a bunch of hams reporting emergencies directly on
police channels would be absolute chaos.

Add to that the number of incidents that appear to be life-threatening
but aren't. The number of incidents where someone has a
less-than-life-threatening emergency but decides it's important enough
to justify talking directly to an officer anyway. And the possibility
of non-hams with absolutely zero radio training discovering they can
directly summon police with inexpensive amateur gear. (and of
criminals discovering they can jam police communications -- which has
already happened) and I think you can understand why out-of-band
transmit authority is in danger.

Of course, it could all become a moot point with so many
public-service agencies moving to 800MHz trunked radio...

Chris my reccomendation is to shop the hamfests this summer and look for an old Heathkit you could find an oldCW transceiver for under $50, I can't remember the model number HW-16? I've seen several of them selling for around $30 or so, a basic CW transceiver that covers 3 or 4 bands. Find someone at the fest who can show you whats available.

Good luck ! We have openings in Muncie, only 90 miles away :)

Seriously, this is pretty difficult. 2 years ago, we took a room on a lark,
but we got the LAST room in a hotel
about 40 miles away. It's worth it though, I don't know where you're coming
from, but if you haven't done dayton
before, it's a blast, and you can't bring enough money :)

Really. Amateurs used to pride themselves on law-abiding behavior.
Today, it's a rare week I don't see a post asking for the OOB transmit
mod for the Yaekencom 230X. I don't remember any of them ever coming
from a foreign country where use of such a radio might actually be
legal! A large proportion of the posts out-and-out admit the radio
will be used illegally to transmit on the poster's employer's
business-band frequency.

Is it legal to transmit OOB if necessary in a life-or-death emergency?
Yes, (though it may not be for long if it happens more than 2-3 times
a year) but do you honestly think that's the reason for most of the
OOB mods? How many emergencies are reported for every person who uses
their OOB-modified rig in a non-emergency situation on a commercial
frequency?

Actually, I'd like to see a 2m FM rig that couldn't do OOB *receive*.
It might actually be possible to take such a radio through a major
city with the PL receive turned off & not hear a cacophony of pagers &
police calls...

I have a 706MKII and had the same problem in my 1985 Chevy Blazer. The people that rebuilt the engine forgot to replace the ground strap from the engine to the body of the truck. Made a big difference. Also have had a problem when the distributor cap becomes cracked or get a build up of carbon on the inside. Hope any of this helps.

I just bought a Heathkit HW-9 qrp rig. Actually works pretty well (just got it last night)....at least rx <grin>. I noticed that tuning to WWV on 10.0 that the dial reads about 4-5 khz too high. I plan on using the manual I got with the rig to do the test and allignment procedure if for no other reason than to learn more about this rig. I was told that 4-5 khz off was about right for a HW-9. Any suggestions/comments ? If you know of anyone with experience with this rig I could contact should I get into any trouble ...let me know.

Tnx es 73 de Mike

While this doesn't address the question, in looking
at the newer radio's, it appears that all of them are
designed for left handed operators - why do you want
your tuning knob on the right and the means to operate
split frequency to the right of the tuning knob? It would
be cumbersome for both the phone and cw op.

Hi Pat,
I don't know. When I go into a ham radio equipment newsgroup I sort of expect to talk about radio equipment and not Scientology.

Likewise I don't go into a ham club meeting and expect to be able to start telling everyone about the virtues of basket weaving. Wrong place, wrong topic.....

Chris, one thing that's worth considering. I bought a Heathkit
as my first HF rig. It worked pretty well, and it broke down
from time to time. However, it came with the full set of manuals,
with nice troubleshooting charts, which was VERY handy. And it
was originally built as a kit, so components weren't jammed in
on top of each other, as with some modern gear--there was room
"under the hood" to work on it. Every time it broke, I'd get
out the manuals, pop the cover, and start troubleshooting. It
was always something I could fix, at least until I just got tired
of dealing with it, after about 5 years.

The result is that I learned something about radio electronics,
and got to know my own rig very well. That worked out very well
for me--and being an old Heathkit, I got the rig at a pretty good
price in the first place. Just one more datapoint to consider as
you look for a rig, Chris. Good luck, and 73!

Why did I do the OOB mod on my radios?

- to transmit between 430 and 440 MHz (yep, there are a few legal
reasons to TX there). It's a valid ham freq, but Icom didn't believe so.

- to use as the IF for a transverter.

- to use as a signal generator or for testing commercial gear within
the screen room

I don't use it to transmit on any frequencies outside of the ham bands.

- A large proportion of the posts out-and-out admit the radio
-will be used illegally to transmit on the poster's employer's
-business-band frequency.

That's true, and it *is* illegal.

-Actually, I'd like to see a 2m FM rig that couldn't do OOB *receive*.

That already exists - the HTX-202. The IC2AT is also limited but doesn't
have as good filtering as the 202.

As for OOB receive, I find that useful both for public service events and
instead of carrying a scanner with me. I use PL decode on most freqs
so I don't get the squawks.

/mike

Hey mike, what is a reflector group? Is it another name for a newsgroup? Is it open to all? I would like to see these reviews, as I am also thinking about buying one of these excellent rigs.

Thanks, marcusjohn a t aol d o t com. KE3SW. (anti spam in effect).

2972. grey line dx

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-28 00:00:00 UTC
From: arouw@t-online.de
Message-ID: <6i550qtin1@nnrp1.dejanews.com>
Source record: 145650

Dear fellow SWL's & Dx-ers In many publications about advanced DX-ing, the phenomenon of "Grey Line DX" is mentioned. I know that this refers to the observation that reception of weak stations may suddenly peak for a short time during sunset/sunrise, especially in the lower SW and Tropical bands. Depending on the situation, the progation path of a radio signal may even follow the sunrise/sunset border along the globe, apparently leading to notable improvement of reception conditions along the "grey line". From my own experience I know that this effect is real. However, the origin has remained obscure to me, so far. Are there readers of this newsgroup who can explain (in simple terms) the physical background of this phenomenon, or who can refer to publications where this is discussed ? I would be grateful for any help on this issue.

Regards,
Aart Rouw

2974. Anyone Tried a 10 Meter Amp on 6 Meters

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-28 00:00:00 UTC
From: EssBase <74364.207@CompuServe.com>
Message-ID: <35461642.1C2A498F@CompuServe.com>
Source record: 145652

Has anyone tried a 10 meter amp such as Palomar Elite 250 Class AB1 on 6 meters. It's made for 10 meters, but I was thinking of using it to boost my 20 watts on 6 to 150.
Has anyome tried this and can share their experiences on how it worked or didn't work.
I plan to use it for SSB mode and have a Palomar HD 250 Elite laying around unused.

With more height, you'd need less watts. This can have a shocking effect
on range. Get the repeater antenna as high as you possibly can. For HT
coverage out to a 10 mile radius, you want a HAAT of at least 100 feet.
Realize that radio paths are reciprocal. If you can hear HTs at 10 miles,
HTs will hear you while your repeater is running HT power levels. But
if the repeater needs 15-20 watts to be heard, it will only hear stations
running 15-20 watts or greater. Height makes the difference.

If you are intending to service HT users, your tolerance for repeater
desense must be *zero*. Fortunately, it is easier to achieve zero
desense when the repeater transmitter is low power. But servicing
HT users still puts more demands on the duplexer than if you were
only servicing mobile station users.

>Also, in my installation, the power is taken directly from the battery
>as is generally supposed to be.

But is radio *negative* connected directly to the battery? This is
important to suppress ground loop noise. The first check you need
to do is see if the noise disappears when you disconnect the antenna
from the radio. This will tell you if you're dealing with conducted noise
or radiated noise. If the noise disappears when you disconnect the
antenna, quit futzing with power wiring and start dealing with the
source of the radiated noise.

You say you installed resistor plugs, but are you using suppression
plug *wires*? You should be, and you should make doubly sure that
the HT wire from the coil to the distributor is suppression wire. It can
be a good idea to install a new rotor and cap on the distributor too. If
the old cap is carbon tracked, or the rotor button burned, this can be
a major source of radiated noise.

Once the new wires, cap, and rotor are in place, you've done about
all you can to suppress radiated noise at the source short of installing
a fully shielded ignition system (there are kits available for that, or you
can homebrew your own). So the next step is to attempt to shield the

engine compartment. The first step there is to bond the hood securely to the body/frame. Do that with flexible copper straps around the hinges. Also check the bonds between the engine block and frame, between the inner fender wells and the frame, the radiator to the frame, etc. Everything needs to be securely bonded together to form an effective shield.

Many newer vehicles are painted before assembly, so bolted joints may be paint to paint and thus not effective RFI bonds even if there is a fairly low DC resistance between them. Improve this with bond straps fastened to bare metal (sandpaper), and using star washers that *bite*.

You've already grounded the tail pipe, so you've done all you can do there. You can bond the bed to the frame, the cab to the frame (this normally floats on rubber spacers, add a strap), etc. While these additional bonds probably won't affect your noise problem, they'll make the antenna system work better.

Now if the noise is still there with the antenna disconnected, you've got conducted noise. If the radio is wired directly to battery positive and negative, and you've added a line filter, you've once again done about all you can do to limit conducted noise. About the only thing left to try is to shield the power wiring where it passes through the engine compartment to the battery.

If you still have ignition noise after doing all this, trade the truck for a diesel.

Hi Karsten,

Problem is that the service manual has no part number for these cables. The local dealer tells me a similar case a few years ago meant them having to ship the cable to Yaesu and then wait weeks if not months for the reply. Not a nice solution if your radio does not work without it. I know it sounds crazy, but there are no part numbers for these cables.

>Uniden/R.S. rigs have LOTS of Audio already though... 73 de
>Jordan...VE2SWL/VE6...

I didn't see the original post on this. I found that the simple dynamic microphone element in the Uniden HR-2510 / HR-2600 just didn't work as well as I would have liked in the car, so I rewired the radio to support an electret element or active preamplified mic element (provided filtered mic bias) and used the microphone from an Icom V-100 (preamplified noise-cancelling dynamic mic) which sounds much better. I also like the way this mic lays in my hand compared to the awkward Uniden factory microphone.

A simple adjustment to match the mic's audio level to my voice level and the radio's modulation & drive requirements and I was much happier with the performance and the sound quality is much better. All I had to give up were the up/down buttons (no loss there, IMHO).

The modification was done in such a way that the stock microphone can still be connected and it will work as normal (DC blocking capacitor in series with the original microphone input pin).

>I have run across a Motorola radio system

Without a model number, it is going to be hard to tell. Most of that old stuff was in the Low VHF 30-50 MHz band. Those tubes are valuable, though. I just looked them up in the current price book and Motorola retails them for $335 each!

Good luck solving the mystery.

2996. FT767 Meter Concern

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-28 00:00:00 UTC
From: Rob Kling <rkling@umich.edu>
Message-ID: <354531C7.2C33@umich.edu>
Source record: 145699

I have a 767 that I bought used that I am concerned about. The meters only work when the AGC is on. Is this normal? Also, when the AGC is on the S/N ratio is greatly diminished. Other than this I like this radio a lot. I also have a 736R and if it were not for the S/N ratio on Sats I would sell it and use the 767. The 736 has a lame computer interface compared to the 767's. On the 736 there is no way to poll the radios current state or to set any of its memories, unlike the 767.

I tried responding via e-mail (twice), but you don't have your
software configured with a real e-mail address.

You need to fix your return address..... you are making it hard to
respond, especially for someone who is offering to do you a favor!

I have the controller box for one of these... I think it is for the
AH-2, let me check. This is the small green box with the switches/LED
that attached to the side of the radio, right? I believe it connects
to the tuner and radio with multi-pin circular DIN cables.

This system was originally installed on an Icom 735 I bought..... and
the antenna and tuner and the long cable stayed with the vehicle it
was installed in for some reason.

If it is for the AH-2, you are welcome to it for postage costs or
trade for whatever you think it is worth to you. I cannot use it
myself and would rather see it go to a good home.

Let me dig it out and check its suitability! I may even have the
manual on this antenna system too!

Both these items are designed for QRP but work well eith a "big" rig.
For paddles try the kit from Northern Calif QRP Club. Their homepage:

http://www.fix.net/~jparker/norcal.html

For a great little keyer try the Tick 2 kit from Embedded Research

http://www.frontiernet.net/~embres/

Both these items are gems.

The above statement is false. Full membership comes from paying dues,
not from subscribing to QST (which is available separately now,
although that was not always the case) or buying it on the newsstand.

Since this has absolutely nothing to do with scanning, can you guys
drop the rec.radio.scanner and alt.radio.scanner crossposts?

This came from a earlier post dated 04/14/98. I found it by searching for the key words "FT-50 power button". I've also heard that when you put everything back together, leave the "light pipe" from the LED out and then push it in from the top. It's a pain to reinstall with in. Also you can try searching for other posts. Hope it helps.

Ezra "Big Fist One Eye Smokin Joe" Duong-Van wrote:
I don't know about you but my FT-50 is always powering on and off in it's holster because of the really stupid design of this button. Here is a mod for the Yaesu FT-50 that reduces the profile of the on/off button and greatly reduces accidental power on/off while still retaining the ability to turn the unit on/off when you want to. FIGURE #1
A. Remove the Antenna, select knob and volume knob
B. Remove battery pack
C. Remove th black sticker that says "CONTAINS NICKEL-CADMIUM....". Do this carefully so you can replace it when you are done.
D. Unscrew the two screws in FIGURE #2. Unscrew these 2/3 of the way and then use the screws to push the keypad out and then totally remove the screws.
E. Use your finger to push out the RF unit out of the black plastic radio case. FIGURE #3 Push from the open space where the keyboard was. (The RF unit is basically the whole guts of the radio which is one piece which is all silver)
F. From the outside of the case push the on/off button out of the black plastic radio case.
G. Here's the skill part: The front of the button says "PWR" and the back of the button has the black electrical contact on it. Now take a real sarp knife (I used a scalpel) and slice about 1/8" off the front of the button (i.e slice the word PWR off and a little more). Now take some fine sandpaper or a nail file board and sand down where you just cut and it will quickly become smooth and pretty.
H. Re-insert the button into the black plastic case.
I. Re-insert the RF unit into the black plastic case. Do this carefully so the red O-ring makes a proper seal with the case.
J. Re-insert the keypad and again make sure the red o ring is not twisted and seats properly.
K. Replace the two screws, then re-apply the Ni-Cad sticker.

L. replace the knobs, antenna and battery.

See page 5 of the May 1998 issue...
"Membership and QST cannot be separated. Fifty percent of dues is
allocated to QST, the balance for membership."

The day they separate QST and ARRL membership, is the day they lose 95
percent of their members.

Let me explain it to you...
In case of emergency where life is in danger, and attempts to reach help on ham bands are bringing no response, Hams ARE authorized to use any frequencies available.

This has allready been the case, in remote areas where repeaters were not accessable, and no one was monitoring the simplex calling freqs, and the person made the call for help on the local police frequency. At first the police wanted to confiscate the radio and charge the Ham (after his friend's life was saved of course) due to their ignorance of the federal law, but were forced to give back the radio, drop the charges, and LEARNED that this was in fact legal via FCC rules.

I want ALL frequencies available in my radio in case I need them. I have never YET needed to do this, and for those afraid of running into a police department that doesn't know the laws, it is better to be ALIVE and in court over the issue, than DEAD somewhere with an unmodified radio!

Chris Buckley wrote:

> because you've probably set
> the reserve at a close to new price.....
are you speaking generally, or are you saying i want to much for my
AT600?

If you have followed my auction you would see that i did start high...
partly because it was one of my first auctions, and partly because I
naively thought I could get more than the market would allow. No bids
were made... my auction ended... and i tried again at a lower starting
bid and a lower reserve,... low and behold the bid is approaching my
adjusted reserve.

Maybe it is me, but if i see something up there and i want it i will
bid... if i turn out to be the high bidder and the seller refuses (based
on reserve)... sure it sucks, maybe they will dicker, maybe not... God
bless them if they can get what they want somewhere else. However, I
believe most high bids that are "reasonable" actually result in a
transaction.

having said all that, i "reserve" the right to change my mind.

Charlie;
I recall back in the late 50's and through the 1960's E.F. Johnson
produced a CB model which had 6 or 8 Xtal controlled "slots." the
model I owned was called a "Viking," and it was a decent little rig -
as CB's went at the time ... I was in the USN at the time, and recall
hooking it into a linear amp of some sort (military), patching it into
one of "my" large antenna systems in the Caribbean ... and blasting hell
out of the fishing fleets at the time ...

A bit strange.

I don't think the UT-106 DSP unit is supposed to affect xmt at all.

Therefore, have not tested that issue; now I will.

BTW ... only on 6 meters, only on FM (not SSB)?

Phil

Need service manual, info for mods full range TX Kenwood TS-870
Thanks - Larry

Subject: TS870 MARS/CAP Modification

TS870.mod
Here is your chance to prove how adept you are at microsurgery.
This mod will enable the TS-870S to transmit on MARS, CAP and the
frequencies.

1. REMOVE TOP AND BOTTOM COVERS.
2. REMOVE THE TOP SCREW FROM EACH SIDE OF THE FRONT PANEL
ASSEMBLY.
3. CAREFULLY ROTATE THE FRONT PANEL FORWARD TO GAIN ACCESS TO THE
CONTROL BOARD(X53-3560-11 A/4). THIS BOARD IS MOUNTED VERTICALLY
AGAINST THE BODY OF THE TRANSCEIVER. IT IS NOT THE BOARD THAT
IS MOUNTED IN THE FRONT PANEL ASSEMBLY.
4. LOCATE AND REMOVE RESISTOR R244 FROM THE CONTROL BOARD. R244 is below
IC12 ROM and above IC23. There are two chip resistors, one on
top of the other -carefully remove or break the top one..it is easily
fractured -that's R244.
5. REASSEMBLE AND THEN PERFORM THE CPU RESET BY HOLDING THE A=B
BUTTON DEPRESSED AS POWER IS TURNED ON.

IT WORKS!!

I believe the mod was done by A.R.E. communications. I have one, and is
good from 500kHz upto 2 gigs. Obviously the HF aspect is not as good as
a dedicated HF rx. I version I own also has the TV receiver adaptor as
well.

>Will rigs get certification pulled for being able to tune 900MHz, for
>example, or is that an overreaction?

I just reread the item. Really, I find it somewhat unclear, whether this refers only to extended transmit coverage or to extended receive as well. I would gather from context this refers to extended transmit only:

Receive coverage of 900MHz cellular - whether in a ham rig or a scanner - is already illegal & has been for years. With the original HR1984/HR2369 dead, there is no immediate threat to scanners covering non-cellular bands. (of course, Congress could always change its mind next year!) With no prohibition against reception of non-cellular bands on scanners, there is no reason to prohibit their reception on ham rigs. There is reason to prohibit extended *transmit*. (for reasons already hashed to death here!)

I intend to replace some of the filters in my NRD535, so if anyone has the replacement Crystal filters for the 535 at a good price, I may be interested. I also have a 1.8khz filter for the NRD that I would like to exchange for for the 300hz, 500hz or possibly the 1000hz, so if you have these, but are mainly interested in SSB, please contact by email

Also wanted, the Bandwidth Control Board for the NRD535.
I am in the UK.

Regards,

Joe Kirlew

Hmmm.... can't an Icom radio communicate with a handheld directly via
simplex RF? Where does a telephone interconnect come into this
equation? There is some critical information lacking in your
request.

Could be you are receiving a signal with CTCSS tone in it. If you hear the buzzing on every received signal (public service, ham, NOAA weather) then this is probably not the case though. A CTCSS tone, especially on a poorly serviced public safety repeater could be heard as a low hum or buzz. It's one possibility.

For Sale - Must move before Dayton - Price reduced since last post:

Heath SB-200 1 KW amplifier, 80 thru 10 meters, in excellent condition. Full output 572Bs in final (800 watts out with Collins 32S-3 driving it). No manual.

Front panel, knobs and meter are immaculate, cabinet has no dings or scratches - just a couple of typical slight "age spots" that Heath cabinets get.

Asking $325.00 plus shipping from 44134.

Marty,

I just bought a used TH-77A. I called Kenwood and they directed me to their retail parts distributor. For 15 bucks I got an owners manual. It sure makes operating the radio a heck of a lot easier! If you're in the east, East Coast Transistor will even send it out forst class. I had it in 4 days. (Good work, guys!)

I have access to 4 Motorola Max Track 800 units
They are model T5377A
These are NEW in the BOX Radios.
What I need is information on what Ham uses these units are
and an Idea of what they are worth.

I think I have one of these.
The size dimensions you mentioned are about right.
Is the Centre a tube with the connector end funneled to the 1"
connector? and a ring clamp with tightening bolt on each end.
Oil filled. Mine is a DA-75. Tagged rating of 500w, 1000w with air
cooling. The dummy is finned it's length.
The connector on mine is type "LC" got one for 12. from the rf
connection. They are on the web.
I hope this is of some use.

Yeah, but this is a waste of time, as so many ebay auctions are, because
of a reserve price. The only way to find out the reserve is to get you
to tell us, which I don't think you will do, because you've probably set
the reserve at a close to new price.....

I missed the orginal post so have to reply to the reply <G>

A lot of the troubles in trucks and cars come from things other than the ignition.
A good example are Electric Fuel pumps used in fuel injected engines. These units are
usually mounted in the gas tank sometimes placing a filter in the power lead to the
pump helps this.
Another source of interference can the fuel injectors themselves.
And lets not forget the computer unit itself (most cars and trucks have them these days)
In My personal VAN (Chevy Astro) the Blower moter caused noise all the time.
It turns out the the fan would run all the time the key is on. I placed a .1 mfd 50v disc cap
across the motor and it stopped it. (the noise)
One of the strange things I have found to cause RFI is the DC charging units that go to the small handheld celluar phones.
I assume the the ones that do this have dc/dc converters in them.
A word on grounding.... Also run a good ground strap from the motor to the frame and the frame to the body, door to firewall etc.

BTW I just got myself a TX-70 last friday. LOVE it !!

One thing you did not say. What are you using for coax? (brand and grade etc)
Don't Skimp on the coax !!

> the reserve at a close to new price.....

i am sorry you feel that way... i haven't had any problem with this issue (thus far) when bidding on other people's auction. Certainly, the "reserve" concept can be abused, but that is not the intention of it. I think eBay is fairly realistic when compared to live auctions... do you really think that most live auctions allow lowball winning bids...buzz,... there is often a person, covertly or overtly, waiting to come to the rescue.

i have heard "reserve" comments like this from several people lately... and when you boil it down they are pissing and moaning because they didn't/couldn't get the steal of a century. I personally use reserve auctions when i think there is a real possibility of getting raked over the coals... if i set my sights too high, then i will never sell,... if the high bid exceeds or is within reason of my reserve, i will honor the bid. I am not going to hold out for 5%, maybe 20% though.

The bottom line as a bidder is: it is you against other bidders and also against the seller. So if you want something, find out what you can about it and make your offer. If someone is willing to pay more, you lose,... and if the seller believes it is worth more you lose. it is nothing more than a glorified,..."will you take X", "no, it is worth more" "ok how about Y",..."no", "i'll give you Z","ok"... or "sorry i just can't part with it for less than Z+10%"...

I realize eBay is far from perfect, but i believe that it... to some degree lets market forces work toward a "fair price" rather than screwing the uninformed buyer or seller. If anything sucks on eBay, it is the sniping and the fees.

3079. Re: MIL-STD 810...

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-29 00:00:00 UTC
From: "Robert J. Dellicker" <rjd@ptd.net>
Message-ID: <Hnw11.717$8f1.3678084@nnrp2.ptd.net>
Source record: 145519

MIL-STD-810E is the latest in a series of environmental testing standards
for military applications.
Equipment can not comply with this standard, only test procedures can. The
equipment may pass or fail the tests.
In order to properly use the E revision you need to know a great deal about
the intended application.
The prior revisions of MIL-STD-810 gave exact procedures for items to pass.
The E revision forces the testing agency to choose the appropriate test
conditions from an elaborate menu.

Some of the environmental conditions which MAY be tested are:
Altitude
High Temperature
Low Temperature
Thermal Shock
Transportation Vibration
Loose Cargo Handling
Mechanical Shock
Salt Fog
Immersion
Chemical Compatibility

Each of these tests has various flavors depending on the application.
This standard was not specifically intended for electronic equipment; there
are other standards that cover electromechanical interference and
electromagnetic pulse environments.

The FCC has stated that the rules stating any frequencies available
is only applicable to the Amateur Radio service, and that the
statement about any frequencies available only applied to any
HAM frequencies available. IE, a nocode tech, in an emergency,
can use HF Extra frequencies.

>This has allready been the case, in remote areas where repeaters were

Can you advise where this case was? The case in California about
5-6 years ago, the radio WAS confiscated, and the FCC was
present during the forfiture.

Why not a USED FT290? Here in Aust they are normally $350-400 second-hand
(though I've seen them as low as $150). So that would work out to be
approx $US250.

They're good for driving transverters too - I can do 80-10m all mode on
an FT290 with two transverters.

Tracker557 (tracker557@aol.com) wrote:
: 1. Save the receive freq to memory as you would any simplex freq.

: 2. go to the VFO and dial or punch up the TX freq.

: 3. press and hold the FW key. When the memory number starts to flash dial up
: the chan. you saved the recieve freq on.

: 4 after performing step 3, while the memory number is still flashing, press and
: hold the PTT button while pressing the FW key.

: 5 go back in to memory the saved memories (out of VFO) and check it out. the +-
: repeater shift indicators should both be on.

: 6. clap your hands together 5 times to congradulate yourself.

Indeed-it's quite a hassle, and you REALLY need the manual in front of
you!

: This procedure is outlined on page 26 of the users manual under "custom TX
: offset"

YEP

: Tracker

: P.S. - this procedure is helpful if your rig is moded to tx out of band and you
: don't want to be sitting on the PTT while you are tuned to the local police
: freq. Just save the recieve freq as you would normaly and use the above
: procedure to save a freq on the TX side that the radio won't TX on (ie.
: 590.000MHz)

Another good way is just to use a "off the wall" offset!
Note-ADMS 1.05 has a bug that limits entering custom offsets-RT Systems
will send you version 1.07 at no charge, if you call them and complain
about the bug.
1.07 has that problem solved.

Another way-for temporary use is:
put the RX freq in VFO 1
put the TX freq in VFO 2
get into the setup menu(press and hold knob until menu appears)
go to function 8(VDUP)-it should be off-turn it on by turning the knob
click the knob to save it, then click the PTT.
your display should then show BOTH A & B-normally, you will only see one
or the other.
You are done-RX will be VFO 1, but when you hit the PTT, you will be
TX'ing at the VFO 2 frequency(the display will show this as well).

The above way is way easier to remember without the manual in front of you!

We are talking about why HAMS would be modifying HAM RADIOS to transmit
out-of-band. Not too many NON-HAMS have these radios to modify, so why
even bring this up? Are they going to modify their car stereos?

Think about how SILLY your statement is. The FCC made a statement that
a person should allow human life to die rather than transmit on a
non-ham frequency? If you are going to make up lies, don't say that
they are statements from the FCC!!

Here is a REAL statement from the FCC! from:
http://www.fcc.gov/wtb/amateur/amfaq.html

1. Section 97.403 states that no provision of the rules prevents the use
by an amateur station of ANY means of
radiocommunication at its disposal to provide essential communications
in connection with the immediate safety of human life
and immediate protection of property when normal communication systems
are not available.

2. Section 97.405 states that no provision of the rules prevents the use
by an amateur station in distress of ANY means at its
disposal to attract attention, make known its condition and location,
and obtain assistance. A sinking ship is a good example.
It further states that no provision of the rules prevents the use by a
station, in that exceptional circumstance, of ANY means of
radiocommunications at its disposal to assist a station in distress.

I have the following Radio, and electronic equipment for sale. Reasonable offers or trades for radio and Pentium computer EQ. will be considered. All working last time tested unless noted. Shipping is extra.
Thanks

• Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks good and works well. 100W output. $200

. Siltronix 1011D excellent condition both in looks and operation. Scale of 1/10. I would rate 9.5. $200

. Swan 350 Transceiver with Power supply 80-10 meters also have Mobile PS and Phone patch. Looks good works well. $225.

. Swan 270B Transceiver has internal Power supply 80-10 meters. Looks good works well. $225

• Heathkit HW 101, 80-10 meter transceiver. No Power supply. It is receiving, but don't not transmit. Not able to test. Looks are 7/10. As is $80.

• Hallicrafters Model S-108 SW Receiver with a calb. Ham band spread. Looks good works well.$75

• Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $100

• Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $125

• Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM. AM not working. $125

. AR Inc.- Stereo Amp, all solid state. $100

. Sams CB Photofacts. Volums as follow: 3 4 5 7 8 9 11 14 17 19 20 22 24 25 28 39 50 54 57. $5.00 each or $80 for the Lot.

Hello. I am in need of 2 full size VHF rubber duck antennas for a couple of recently acquired HT's. One has a stubby duck (which works about as well as a dummy load) and the other has none at all. If you have a couple in good shape with standard BNC connectors please email me with your asking price. Thanks in advance.

Absolutely,

Some company in eNgland, I don't recall who however....made/makes an internal S/W converter for the 7100 that does tie into the receiver's logic to allow you to use the dial (or memories!) to tune below 25 MHz....Drop me a private line to remind me, and I'll look up who it is. I bought one but never installed it.

> In case of emergency where life is in danger, and attempts to reach
> help on ham bands are bringing no response, Hams ARE authorized to use
> any frequencies available.

I believe that's not correct.

Hams are allowed to operate out of compliance with the Part 97
regulations, such as its rules on transmitted power, class and mode
sub-band limits, signal purity, non-interference etc., in order to
provide essential communication needs in connection with the
immediate safety of human life and immediate protection of property
and when normal communication systems are not available.

But when it comes to operating outside the ham bands, I believe that
hams have no more rights than an unlicensed person to do this,
although they certainly might have greater means and knowlege to
achieve it.

The fact is that when it comes to saving human life, most people will
go to *any* lengths, including breach of the law, to achieve that
goal, such as when speeding an injured person to the emergency room.
But if you're then brought to account for your actions, just plea the
emergency circumstances in mitigation and do not try to plea that you
have any particular FCC permission on account of your license.

Claiming you have permission would not be true and I believe that
raising such a false defence will only harm your genuine and best one.

Regards,

I have the TH-G71A 5w radio and to date it is the best handheld radio I have owned because of ruggedness and simplicity. I have a friend who has a FT-50 and I have played with it alot and there is not really anything bad I can say about it. It does have a wider RX coverage than the Kenwood but alot of it is not things I listen to anyway (I do use my Kenwood as a portable scanner.) The TH-G71A is better than Kenwood HT's of the past in respect to scanning speed which was incredibly slow on my TH-79A. The scan is about the same as the FT-50. It appears to be about 10 channels per second. The radio only receives VHF-High and UHF from the factory but a simple internal mod allows 800-950Mhz RX with cellular blocked. The transmit power and audio are great. The audio from the speaker is, in my opinion, louder than the FT-50 by a slight margin and the best I've heard from an amateur HT since they started shrinking. The G71A includes CTCSS encode/decode and decode scan to find unknown tones. The antenna that comes with it is fabulous. Probably comparable to the Comet SMA-3 that everyone raves about but is rather large looking (8" long) on such a small radio. I use it for fringe area portable operations and have a Diamond SRH-805 stubby for close in use. The backlighted display and keypad are exceptionally easy to use in the dark. The 6 character alpha tag for each memory is nice. I use it to keep up with public safety frequencies. The radio does lack DTMF decode paging which I miss sometimes, but not a major factor. I have been waiting for an HT like this for a long time. However if features are what you care about, the FT-50 is full of them. Such as DTMF paging, squelch activated backlight, battery level readout, and wide receive range right out of the box. I would definitely recommend the Kenwood but you won't go wrong with the FT-50 either. They are both great radios. I'm sure I've left alot out, but if you need more info you can email me at kevin.lanning@eastgroup.com.

Hi Gus,
You should probably narrow down the requirements a bit. What multibands 2M/440, 10,15,20,40,80,100, The warc bands, 220, 6 meter? Mobile, base station, portable?
I have a Kenwood TS-140S HF rig that covers 10M -160M including the Warc bands. I am asking in the $675 range which sounds like it is out of your range.

I was into radio a long time ago and have since had my interest rekindled. Not being knowledgable about the newer products, and barely about the older ones, I was wondering what the capabilities of the Yaesu 415 are. What are its range limits, uses, etc? I live in the Greensboro, NC area and wish to know how far it can transmit under nornal conditions. Excuse my ignorance on this matter, because I never used a handheld HAM radio.
Any pros or cons with this radio appreciated also.

Thanks!

3108. FS: Motorola Micor VHF Repeater

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-29 00:00:00 UTC
From: "Frank J." <w0ely@spacestar.net>
Message-ID: <35474960.689@spacestar.net>
Source record: 145548

For Sale: Motorola Micor VHF Base Station Repeater, 110 Watts RF output, currently set up for the U.S. Department of Alcohol, Tobacco, and Firearms transmit frequencies of 166.5375 (F1) and 165.2875 (F2), and receive frequency of 165.2875. Has the following "standard modules":
Line Driver Module
Station Control Module
F1 Control Module
Guard Tone Decoder Module
Has the following "optional modules":
C2 R2 Control Module
DVP Control Module
Code Processor Module
Voice Protection Module

The unit's model number is C73RXB-1126B-SP2, Serial number is 525CKN1069. The unit is complete including the power supply, and I believe that it is classified as a "unified chasis". It weighs approximately 200 pounds, and is housed in a standard Motorola rack cabinet that is 10" deep, 22" wide, and 41" high, and has removeable front and back panels with locks on each panel (keys to the locks included). The unit is in execellent physical condition and was working when last used. It has been sitting (not used) for over seven years. I was going to modify it for amateur radio use, but this project is more than I can handle (have done nothing to it since purchased!), so I am offering it for sale. Asking $750 and pickup at my QTH (or in Minneapolis, MN local area) is preferred, but it can be shipped via truck (not UPS or FedX) which must be arranged and paid for by the buyer. I can provide jpeg pictures of the unit (attached to an email) if requested.

Also have for sale, Motorola VHF Radio remote Console which is currently configured for control of 2 transmit frequencies (F1 & F2). Model number is T1391, serial number HG027H, part number 17034 205649 4228 0001. Asking $150 plus shipping. Approximate shipping weight is 30 pounds and can be shipped UPS or US Postal Service.

I realize that the model/serial/part numbers can be decoded to show other information on the units, but I do not have that "decoding information" and that is why I included the numbers in the description.

Thanks
Frank

I agree with what you had to say about the Kenwood and just wanted to add
that I bought the Maha MH-C777 universal charger instead of the Kenwood
charger and it works like a charm and only cost $50. It also charges all
my other radio batteries too and only takes about an hour to an hour and a
half.

Hi, Roger.

I've been watching for a message re this topic. I've been using KaGold,
but (with the 50CT available) I'm interested in a Win-type program.

Thanks! See you on 32.

Phil

I am looking for a pair of older Kenwood radios from the mid 70' to early 80's. The first is a TS-700 (A, S or SP) 2mx all mode radio. The other radio that I am looking for is a TS-600 of the same vintage, but this is a 6mx all mode at about 10watts. Please call Glenn 403-449-4252 evngs 403-429-8264 days or email with details to ve6inm@aol.com. Thanx!

3116. Reducing output power from radio to antenna

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-29 00:00:00 UTC
From: Paul Lantz <plantz@onlink.net>
Message-ID: <6i7c2fqpk1@onlink3.onlink.net>
Source record: 145556

I am getting a yaesu 8100.
It has a minimum power level of 5 watts.
What is the best way to reduce power to the antenna (I don't want to do anything to the radio)?
Much of the time I can operate with very low power for local needs - what could I insert between the antenna and the radio to reduce power to .5 watt or less (other than a couple hundred feet of skinny coax!).

thanks

Paul, VE3KBL

Message-ID: <01bd7380$fde9ad80$af014999@user>
Source record: 145558

Can anyone provide help for a friend of mine?
He has a FT690 which has not been used for a couple of years and when getting it ready for the start of the Sporadic E season across here, he found it would receive OK, but not go to transmit.
The symptoms as described to me are:
Press the PTT and the receive cuts out as expected. However, the TX LED does not come on & the tcvr does not tx. He has found that where some DC voltage is fed thru to the tx area, that there is 7.?Volts appearing on transmit. (He seems to recollect reading many moons, ago that there was a Capacitor which could go faulty and cause these symptoms)

Not much to go on, but does anyone have the answer or suggestions for him?

thanks
Alan GM4JCM

3120. Need Help: TS-850 no output on 20m band.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-29 00:00:00 UTC
From: anc@newstar-tech.com
Message-ID: <6i7p7h$8ks$1@nnrp1.dejanews.com>
Source record: 145560

Hi.

Thanks for reading this message.
I have a somewhat serious problem with my TS-850SAT. 20m is my favourite band and my radio does not show output on this band. I use a dipole antenna with 1.1 SWR at 14030kHz, and when I press 'AT TUNE' button to tune the auto tuner, it shows no output and infinite SWR. I tried to reset the radio but it does not work. Other bands are OK. This problem only occurs on 20m. If I use external watt meter, it just has no output.

Even if I turn off the auto tuner, there is no output. I wish this is not a serious problem, and if anyone knows how to resolve this problem, I will really appreciate that.

What I am going to try is, take out the auto tuner from the radio, and then try transmit on this band.

Any suggestion will be appreciated.

Many thanks in advance.

Well, *you* may be, but when I started this thread, I was talking about certification being pulled for out-of-band *RECEIVE*! HR2369 is *NOT* about interference, or "freebanding" -- it is about restricting the right to *LISTEN*. The rigs I think of immediately getting their certification pulled (or the rigs get heavily redesigned) are the FT-50, the VX-1R, and so on.

Again I ask: Is what the 5/98 Monitoring Times back page said correct? Will rigs get certification pulled for being able to tune 900MHz, for example, or is that an overreaction?

Thanks much, and please excuse the exasperation,

Eric, KB0YDN

Blake Bowers (bbowers@townsqr.com) wrote:
: Can you advise where this case was? The case in California about
: 5-6 years ago, the radio WAS confiscated, and the FCC was
: present during the forfiture.

In fact, I'm pretty sure that in the end, the ham got his radio back, and the FCC retracted the half-assed interpretation that led to the confiscation of the radio.

In situations involving imminent threat of loss-of-life, hams (for that matter, anyone with access to a transmitter) are authorized to use that transmitter to seek help via any means available. The letter and spirit of the law had always (up until this case) been quite clear on that. SDSO confiscated the radio under an obscure clause that had been inserted into Reagan-era anti-drug legislation --- in fact, up until this case, I believe even the FCC was more-or-less unaware that the clause was buried in there --- the clause only protected law enforcement freqs.

Common sense would dictate that emergency comms first be attempted on the service you're licensed for - I think that's what people are talking about here - namely, if you have a novice class ticket, first seek help in the general class band before you dial up the local PD. In the SD case, the ham did just that - he only attempted to contact the SO (and then, only on a secondary so as not to interfere with dispatch ops) after attempts to raise help on ham repeaters and simplex failed.

BTW - there were mitigating circumstances nearly as interesting as the original case. A week or so after the confiscation, the officer who made the bust was out hiking (off duty) when he became ill. He used a ham HT to call the SO, and received an airlift off the trail. This incident was considered in the decision to drop the original charges.

3124. Dummy Load Question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-29 00:00:00 UTC
From: David Kao <david_kao@hp.com>
Message-ID: <354758C1.58E0@hp.com>
Source record: 145564

I found a couple of big dummy load blocks in an electroincs surplus store today. They are about 8"x8" and about 12 to 15 inches deep. They weigh about 10 to 20 lbs each.

These dummy loads are made by Bird, scraped by US Navies. The connector on them are big, something like 1 inch in diameter. No frequency info on them. One of them has a hand marked "500 watts" on it.

Anyway, I am just wondering what dummy loads these are. They look pretty clean. They might be good for HF or even VHF. I am thinking of getting one of them and convert the connector for my HF use. Good dummy load is hard to come by.

Does anyone have any idea what these dummies might be? I think I am going to go there again tomorrow. If the DC resistance is right in the 50 ballpark then I am willing to toss the $40 to get one of them.

Any info these dummies might be is much appreciated.

Regards,

David

You'd be surprised how many non-hams use modified ham equipment for
communications.. I've seen police officers, sheriff deputies, firemen,
volunteer firemen, civil defense weather spotters, and EMT's using ham
equipment for their communications. Some are hams, some are not, but the
fact remains that they do use modified ham equipment on frequencies
other than amateur radio frequencies. Especially volunteer firemen and
weather spotters, if they have to provide their own equipment, it is
usually always modified ham equipment, simply because of price. It's
not legal but hey, ever seen a cop ticket another cop? It simply
doesn't happen. Ever seen a cop obey traffic laws, it simply... never

mind, another story.
As to using any frequencies in an emergency, that is crap, it comes down to how you define Emergency. A few years back, a California ham was hiking in the mountains with some friends. One fell and had a compound fracture of a leg. After trying a cell phone and ham repeaters to no avail, he got on his modified ham HT and managed to contact some sheriff's department. They dispatched emergency equipment and took off with the injured party. They also took off with the radio operator and stuck him in the pokey. The FCC came along and confiscated his HT and levied a fine. I'm not sure how this all played out, but this story was in the ARRL magazine QST. So, any port in a storm is simply not true. I would think a severe compound fracture on a mountain top miles from any medical help would be a true emergency, but the sehriff's department and the FCC apparently wouldn't agree with my assessment. Personally I would do the same thing this person did, because that was the right thing to do.
Here's a law enforcement/ traffic law story that you may/may not find humor in, I didn't. I was driving through a local town a few years back when a Highway Patrol car running hot with no lights or siren passed me at high speed in a 30mph zone. I floored it and clocked him at 65mph and backed off. I saw him turn up the street aways, so I turned there also. Shortly after I spotted him at the Domino's Pizza place. I pulled over and watched. Sure enough, he picked up an EMERGENCY pizza order..

3126. Looking for CHEAP computer-controlled receiver

Newsgroup: rec.radio.amateur.equipment

Source record: 145566
Cross-posted to: sbay.hams,rec.radio.amateur.equipment

I'm currently working on a satellite project at Stanford University.
Our satellites will be transmitting a CW beacon signal, as part of their
operations.

I'm looking for a CHEAP receiver with the following characteristics:
- 70cm band (additional 2 m, a plus, but not a requirement)
- Outputs audio level signals from a CW RF signal
- It needs to be tunnable be to account for doppler shift, and different
satellite frequencies
- the tunning should happen either automatically, or by computer
control, no human interaction should be required
- Computer control should be available through a C++ program running on
Win95

Thank you for any reccomendations
Carlos

Burt claims he is a school teacher, anyone know where and what school he teaches in? We can find out who the school board president is, and forward his ranting and ravings to so they can see what kind of nutcase they have teaching their children. I don't think BF should be near children much less teaching?them. We can find out who the editor of the local newspaper is and advise him of who/what BF is and what he is doing. Get this out in the local press and the parents will take over and have his head on a platter. The locals can send BF pizza, taxis, tow trucks, service calls, callgirls, etc. More than one way to skin a crazy cat.

3128. FT50 Disassembly/Power Button

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-29 00:00:00 UTC
From: jeffj@koala.scott.net
Message-ID: <6i5t1l$1ps@news.scott.net>
Source record: 145612

Thanks to everyone who responded to my post regarding disassembling the FT50R. I have had numerous requested from people who also needed the same info so I figured I'd post it here. To disassemble the FT50 follow these steps:

1) Remove the battery, antenna and both knobs (just pull 6em off)

2) Remove the sticker on the radio unit with the nicad warning, don't throw it away, you'll need to reinstall it later

3) Unscrew the two phillips head screws about 2/3 of the way then use them to push the keypad from the front of the unit. Once the keypad is loose, go ahead and remove the screws completely

4) Gently push the area where the keypad was towards the back of the unit (be careful not to disturb any of the components) The entire assembly of pc boards and the big metal heat sink will slip from where the battery normally is located

5) Remove the power button and replace it with the new one, also go ahead and pull out the little LED light pipe (we'll install it later)

6) Reverse all of the steps for assembly of the unit making sure not to crimp the gaskets. The last thing to do is to slide in the LED light pipe from the top of the unit.

7) Now you are done :)

While you have the keyboard out, you can go ahead and do the MARS/CAP mod. It's extremely easy and the details are easily available on the 'net.

For everyone wondering the way to get a new power button they were available from the Yaesu rep at a recent local hamfest I attended. Since I missed the chance to get one from him :(I emailed Yaesu tech support and they mailed me one of the new buttons. The new button is much shorter and makes it harder for the unit to accidentally turn on or off. The main reason I replaced my button was because the carbon on the back of the button was quite worn and turning the unit on and off required an extreme amount of pressure. The new button cured this problem and also the problem of accidentally turning the unit on and off.

I must commend Yaesu for their excellent customer service. Their response to my inquiry involving the button was extremely prompt and in today's world it's quite nice to have a company send you a free replacement piece for a unit that is past it's warranty period. Now I have just one more reason to be a loyal Yaesu customer :) I hope this information helps those who need it.

> compares to the FT-50R and IC-W32A. Thanks, Nick KD5YW

Nick, I've owned both the FT50R and the THG71A. The THG71A does not have the broadband receive coverage that the FT50R does. The THG71A has an illuminated keypad and seemingly louder and clearer audio. I found the FT50R unusable in a high RF environment (on one of the top floors of a hotel that had several communications antennas on the roof) due to receiver overload. The rapid charger for the THG71A costs significantly less than the one for the FT50R. The battery on the THG71A seems to last noticeably longer that the one on the FT50R. I prefer the THG71A over the FT50R.

To all that has been following my sales I have
sold one W32A and a Alinco D-180... I ran across
a deal on another W32A that I'm selling.

Icom W32A 2m/70cm Hand Held like new, no scratches.
5 w Battery
Original Box and receipt with foam and dc charger box.
DC charger
Programming cable and software
Manual and warranty info
Mars Modified, have keystrokes on request for crossband repeat
extended range tx and rx.

all for $250.00

"Without" software and program cable I will sell for $200 firm.

I do COD unless you send in the full amount in which people are not to
safe about.

KF4TUZ, look up my call on http://www.qrz.com/ to get location info.
My mailing address has changed, since I'm moving, so make sure you
write me a message before you send the money to cover the COD charges.

E-mail me at kf4tuz@qsl.net for speedy responce.

From: nt6blonnie@earthlink.net
Message-ID: <35488BFF.85D942BC@earthlink.net>
Source record: 145279

Glenn...I have a very clean TS700SP Kenwood. The transceiver is a second owner for me and I have all the manual, including service manual, including the original hand mic. The only thing keeping the rig from a 9 rating is the "Power" stenciling on the face is worn off but till visible. The unit works well and it has never been exposed to a smoking environment. As you no doubt know the 700 SP has a digital readout. This is a very nice unit, very very clean. $375 US plus shipping from 92570. If interested respond to my email address....thx...Lonnie (NT6B)

3144. Business Motorola base AMP for 4xx.xx commercial range info

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-30 00:00:00 UTC
From: kf4tuz@hotmail.com
Message-ID: <354f809e.465731793@cnews.newsguy.com>
Source record: 145280

I was wondering if anyone knew about this amp, I don't have any serial #'s yet.. it's owned by a trucking company, and run through a yagi ouside the building. I was wondering if you can use it for the whole 440 mhz amatuer band without modifing it, etc. It's a Motorola, and a box about 10 x 9 or so, I figured it's at least 35 w's because when they are tx'ing on it while the phones are ringing it slurs the tone.

I would have to throw in my $.02 here for the ADI AT-600. I have the
600 with the HP battery and I love it! It's got every feature that I
can think of, has a very easy to read dispay, and the price is right.

The only downfall to this radio is the audio out is a little quiet. If
your going to use this for hiking or something, it's a great radio, but
not the best if you want something you can hear while walking alongside
a freeway...

In article <6i9e35$kp8$1@news2.xs4all.nl>, "S. van Wijk" <tazzen@xs4all.nl>
writes:

>
>I`m looking voor a program for the KPC-3 to put it in KISS mode.
>can anyone tell me where i can find it? or can anyone send it to me.

Almost any terminal program can send the commands to put a KPC-3
into kiss mode. The commands are "INTERFACE KISS" <ENTER>
then "RESET" <ENTER>

If you are trying to use a program like NOS to put the KPC-3 into KISS,
it's also relatively simple, try in whatever autoexec program you're
using for NOS the following lines

Assuming the portname you use in NOS or whatever flavor is AX0

comm ax0 "interface kiss"/r
comm ax0 "reset"/r

Pleae note that the quotation marks have to be used if you're doing this.

If you're using something like Flex or SV2AGW's program, both have
provisions for setting the commands. The default in SV2AGW's programs
assumes that a certain set of commands exist, and won't work with a
stock KPC-3, but can be changed to work. Good luck!

I almost left out that you should be sure that you know how to get the KPC-3
out of KISS mode. With most of the flavors of NOS, the command

param ax0 255

will work.

With an ordinary terminal program and an MSDOS keyboard with a numeric
keypad, the following using the number keys on the numeric keypad works

HOLDING the <ALT> KEY enter 192 on keypad
then release the <ALT> key, then
holding <ALT> Key enter 255
then release <ALT>

then holding <ALT> enter 192 again.

: Nope. There was even political pressure about getting the radio
: back, but it was NOT returned.

Thanks for the correction - I was relying on a memory that just isn't
so reliable any more 8*(

I know I'm correct that he wouldn't have been popped had it not been
for a clause stuck into some reagan-era legislation - am I also
correct about the FCC backing out of the case (I'm pretty sure I am)?
In that event, the apparently permanent forfeiture resulted from
intransigence on the SO's part...

: >BTW - there were mitigating circumstances nearly as interesting as the
: >original case. A week or so after the confiscation, the officer who
: >made the bust was out hiking (off duty) when he became ill. He used a
: >ham HT to call the SO, and received an airlift off the trail. This
: >incident was considered in the decision to drop the original charges.

: Almost. The ADMINISTRATOR that was dealing with the situation
: used a ISSUED COMMERCIAL radio to call the SO. The point was
: raised that he was NOT a sworn officer, so what made him so
: privilaged as to have access to the SO frequencies.

That makes more sense than what I recall reading... Most of the info
I had came from Westlink/Newsline and the ARRL letter - I think
archives are available for both (does anyone remember roughly when this
occured? Clearly I need to refresh *my* memory 8*))

3160. VX-1R: Crossband memories

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-30 00:00:00 UTC
From: Lars Schaumburg-Muller <oz1cjx@image.denmark>
Message-ID: <354859C9.15D3@image.denmark>
Source record: 145296

Yes, I know, it can be done with a PC, but here is how I did it without:
On my VX-1R (SW code A105) I have among others the following memories:
Mem Frequency Band
1L: 145.200 MHz V-HAM
1H: 145.800 MHz V-HAM
5L: 432.500 MHz U-HAM
5H: 435.000 MHz U-HAM
Now when I do a PS-scan in the 5L-5H range, turn the radio off and on,
it will resume scanning, but the frequency will decrease until it is
within the 1L-1H memory span. (Probably a bug)
Scan steps will be 25 kHz or 575 kHz (=145.8-145.2-.025 kHz) depending
on what way you turn the knob, but the direction will be down in both
cases until the 1L-1H range is reached.
Once you are there, you can put any frequency between 1L and 1H in
memory, still being in the U-HAM band.
There are probably a lot of other combinations possible, which I will
leave to your experiments.
Have fun!

Vy 73 de Lars, OZ1CJX

The unfortunate thing is...we don't want to let go of our magnificent Standard C288a HTs.

<g>

Jun's in Los Angeles has the Icom 2M-220 HT on sale this week!!!

3164. VHF ants. which one? (17b2,m25wl,m218xxx??)

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-30 00:00:00 UTC
From: baack@maine.edu
Message-ID: <6iaig2$1kr4$1@sol.caps.maine.edu>
Source record: 145349
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.antenna

Hello all.
I am deciding to upgrade to one of the following
antennas for my terrestrial 144MHz activities.

CC 17B2.
M2 5WL
M2 18XXX.

Now I have found that the 17B2 and the M25WL
are within $15.00 of each other, with the 18XXX an extra $40.00 more.

It has been suggested to me that the M25WL
is the best of the bunch due to several reasons.

a) Construction qualities.
b) Size
c) Easy to manage.

The 18XXX was though to be too much of a hassle (becasue of the size)
if / when you have to work on it.

(One of the them will be up on a 60' tower + 10-15 feet of masting)

The 17B2 is the cheapest in $$ in the group, and seem very popular..
(And CLAIMS to have the most gain in the catalog, but other information
I have found seems to counter that..)

I guess I am looking for recommendations etc.

For those using the M25WL why did you not go for the 18XXX??

Ideas, comments etc.. would be great.

Thanks.

Good grief! Yet another newly released radio with a design defect which requires a modification. Where did the ICOM engineers go wrong this time?
Doesn't the Aussie FCC have a problem with this? Why do they certify these defective radios for import? They must be paying about as much attention to this detail as are the ICOM engineers.
FYI, every Radio Shack radio that I have purchased transmits FULLY in the amateur band that it was designed for, and requires no modification. I don't know if they have Radio Shacks in Australia, but you might want to check on it.
Good luck getting your ICOM T8 to work correctly!

From: Larry Anderson <ka6fqn@discover.net>
Message-ID: <35494CDD.50DB@discover.net>
Source record: 145360

I had the same or similar problem. The noise was NOT comming in on the power wiring. This is in an 87 Suburban with 454 engine. I tried everything mentioned including building fully shielded plug wiring. NOTHING helped! The DX70 has a BUM noise blanker, PERIOD! The mfgr as much as admitted it in an article just after it came out. They were supposed to fix the problem but you know how that goes.

The newer vehicles with very high ignition voltages just make it harder to do HF on the road. I am now using a Yaesu FT-840. It still has some noise but I can live with it. The blanker on it does work. So now I am enjoying my HF on the road to and from my daily go to work trip. Hope you have better luck with the DX70 but don't hold your breath.

3178. IC-W32A Transmit Range

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-30 00:00:00 UTC
From: ve3jtr@rac.ca
Message-ID: <6iamgl$is7$1@news.reach.net>
Source record: 145363

I have recently bought a new IC-W32A, and have discovered that it transmits from 140 MHz to 150 MHz out of the box. The manual says it is supposed to only cover the 144 to 148 band. The UHF range is the appropriate 440 to 450 MHz.

I believe the extended range is the MARS/CAP ability others have mentioned here. Is there any way to close up the range so that it only transmits between 144 and 148 MHz?

Thanks,
73 de Jeff VE3JTR.

3185. FT920 Mods for 136 kHz

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-30 00:00:00 UTC
From: John Worsnop <xch81@dial.pipex.com>
Message-ID: <6iarvi$lk9$1@plug.news.pipex.net>
Source record: 145370

Hi out there,

I have just obtained the ATT0274 software for extending the FT920 range outside the Ham bands. Looking at the GEN-TBL.TXT file it looks as if you can specify the frequency range you can make it TX on, and the default is 1.8 - 54. I daren't try it though, because of the horror stories about having to replace the EPROM if you mess it up.

Has anyone tried changing th2 file to make it TX on 136kHz?

Yes I know the PA probably won't hack it, but maybe I can extract the RF from somewhere else for an external PA.

not to forget off shore Radio Operator (3 ELE) (WPEK 875) (KD5DGS)
I am covered by more than one set of rules,
MUTUAL AID with your local goverment is planing ahead, so when you do need
to
call the PD dispatch, life is good, and you are serving the goverment,
who otherwise might cause you large greif

I have been in the game since... 1972

so by planing ahead, you have the FCC tickits for fire / Police S.O.
all by the book, all letter of the law.

Which still leaves the question why, or how did the FCC get the IDEA to TYPE
APPROVE radios anyway

3189. Re: FCC de-certifying ham rigs?

Source record: 145374

Well, as both a ham and a police dispatcher, I think I can speak with some authority on the issue of hams accessing police channels.

Chaos would ensue.

On primary police channels any officer is apt to call for assistance, or start a chase, or have shots fired at any time. Rigid discipline has to be maintained on those channels to insure that an officer needing the channel can get one immediately.

My agency has experimented with having housing security officers among others accessing our secondary channels such as the tag info and wanted check channel. The confusion an unrecognized voice or ID causes even on those channels is appalling. And the time it takes to clear that confusion means an officer is standing there with someone who could be a danger to him or herself and we can't get that information to them.

As much as I support ham radio, and that is nothing less than 100%, I could not see any circumstance that would allow for unrestricted access for whatever reason directly on our channels. Besides, you can always autopatch to 911.

Best regards,
Disptacher Bill Stewart

We have written a Toroid software package for use DC to 300 MHz. Many Years
of research has gone into error corrections for the low perm cores , 200 & 360
degree coverage as well as SRF for series and shunt coils. Much of this has
come about as a request from Micrometals. The pin point accuracy allows us to
add a custom core feature for custom shaped cores, stacking cores side by side
and machining custom phenolic cores from plastic, teflon, wood, ect...

3192. FAQ: Plectron and Motorola Alert Monitor Receivers

Newsgroup: rec.radio.amateur.equipment

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant

max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

Hi All,

I installed the UT-106 I received in the mail, with no apparent problems. Afterwards I started playing on receive, getting used to the DSP. The next day I worked some stations on six meter SSB, it seemed I had an unusual distortion on peaks. It seem to get worse the higher I turned the NRL level? Also the longer I talked the worse it got, causing frequency instability too. I removed the DSP and the problems seem to be resolved?

Anyone have any ideas on the cure or cause to this problem.
73's,
Benjamin Blavat, KF4KJF

Nope. There was even political pressure about getting the radio back, but it was NOT returned.

Almost. The ADMINISTRATOR that was dealing with the situation used a ISSUED COMMERCIAL radio to call the SO. The point was raised that he was NOT a sworn officer, so what made him so privilaged as to have access to the SO frequencies.

Greg.

I am not sure but the model number looks like a Challenger series that uses a radio interface box and cable and plugs into your serial port of your IBM compatible computer. You need the software supplied by Johnson to run in you compluter to do the programming. It is not hard to figure out. If there is another programmer, I am not familiar with it. Johnson made an earlier programmer that was used for the SDL series and the LTR 8700 and 8710 radios. It blew one time link type proms. They also made and interface for an early Radio Shack 100 series computer but it required software as well.

Jon

Recommend you don't count out the Alinco DJ-G5T....it is a much better unit than the Yaesu FT50 (which is only a dual watch...careful..it WILL NOT monitor or tx/rx both bands at the same time...the Alinco will) I have the Alinco, and a bunch of my friends do. It is a great little rig... Value-wise, when you consider you get ALL the features the others DO NOT have, you cannot go wrong.

It was the police that illegaly took his HT. They didn't know the law
(how unusual) The hasty illegal actions against him were corrected.

> So, any port in a storm is simply not true.
> I would think a severe compound fracture on a mountain top miles from
> any medical help would be a true emergency, but the sehriff's department

They sure WOULD! Go to the FCC website yourself and check out part 97
rules!

ï¿½97.403 Safety of life and protection of property.
No provision of these rules prevents the use by an amateur station of
any
means of radiocommunication at its disposal to provide essential
communication needs in connection with the immediate safety of human
life and immediate protection of property when normal communication
systems are not available.

ï¿½97.405 Station in distress.
a.No provision of these rules prevents the use by an amateur station
in distress of any means at its disposal to attract attention, make
known its condition and location, and obtain assistance.

b.No provision of these rules prevents the use by a station, in the
exceptional circumstances described in paragraph (a), of any
means of radiocommunications at its disposal to assist a station in
distress.

Of course, you could always be one of those people that interprets "the
right to bear arms" as: Guns without a government permit is illegal.

Hi all,

If you need valves for your radio, transmitter, amplifier or any kind
of electronic equipment, I can probably help you.
We have more than 1800 different valve types in stock as well as a lot
of different valvesockets, transformers and books about valves and
electronic equipment with valves in it.

Visit my homepage at http://www.vestdata.no/~arnoldg/valves.htm

I was thinking about constructing a multiband adaptor for the TT Scout.
Something that would accomodate all my 7 band modules
(80-40-30-20-17-15-10) in a box, with a band selector switch. Quick and
easy band switching that way. Anyone think/try this yet? Also, what
about homebrew/modded modules for 6M, or a second/remote VFO?
I would think at least the module box would be quite do-able. Comments,
suggestions, warning all gratefully accepted.

Will

Hi.

I would like to get either CSI-800 (preferred) or CSI-900.

Also if you have the cables from these unit to:

HTX-202 (portable)
HTX-242 (mobile)
ICOM 706

I am also interested in getting those.

Thanks.

>
> Thanks in advance for any help!
It comes as standard with 2M & 70cms.
Options include a built in AC mains supply,23/24 Cms & 13 Cms modules,
a general coverage rx from 50-905 MHz (AM,FM & wide-FM but no SSB)
& an ATV module (old-fashioned AM modulation video -in Europe most of
this
is FM Video so no use to me).
I have the AC power supply,23 cms & generla coverage options.
It's a physically large box but at leat it's all in one unit.
They stopped importing the IC970 into Europe a couple of years ago
-special
order only.It's probably still on general sale in USA & I'm glad I
bought one.
It gives me all modes on 3 amateur bands.
Try ICOM's website for more details.

The defination of an emergency is not the issue, what is at
issue is what can be done after that emergency has been
declared.

This instance, which you already mistakenly called me a liar
about, showed exactly what the FCC felt about the situation. They
had no problem with that radio being confiscated.

When you are an attorney, or better yet a FCC person assigned to
interpet those rules, then you will see that there can be different
interpetations of those rules.

The FCC has decided to interpet them differently than yourself. If
you care to challenge them, fine, go out and get YOUR ht confiscated.
You can pay the legal fees to get your education, but don't set
others up to learn that way!

Don't tell others that it is OK to do something contrary to the
interpitation that the FCC uses of THEIR rules!

Interpetation of the rules is what counts, by the people
responsible for that interpetation. Your interpetation, with
the limited view you have, only counts to yourself.

I'm using RG-8x coax from Radio Shack. It's ok stuff, but not great. I already had a piece with a connector that I had installed on it, that was the right length, so I used it.

As per previous posts, I am going to try putting some braid on the plug wires and installing ground straps on the hood this weekend. I will also be checking out the fuel pump. But the noise I hear is like the popping of the ignition, then when I turn the noise blanker on, it just turns it into a hash noise at the same signal strength.

I found out that Alinco has an update for the noise blanker on DX-70 below SN 1000. So I put my Dad's DX-70 in the truck, his is above SN 1800, The noise blanker worked a little better, but very little. It took the noise level from S9 down to S7. Still nearly unusable when the engine is running. I would be happy if I could get it below S4.

Thanks to all the guys that have sent replys.

Source record: 145467

From: "Christopher W. Buckley" <cwbuckle@mtu.edu>
Subject: WTB: Small Directional Antenna.. Suggesstions?
Newsgroups: rec.radio.amateur.antenna
Organization:
Summary:
Keywords:

I, being a new ham, an EE major, and out of $$, have decided that instead of buying a rotor, I'm
going to build a small one, which mounts on a tripod, and has azimuth and elevation rotors. I've
got all the junk I need for that, but now for the critical part- the antenna.

I'm looking to buy a small directional antenna. I was really considering the AO-27 antenna that
Arrow Antenna has, but they won't tell me any specifications on it, like bandwidth, gain, or
anything, so I am suspicious. Anyway, if someone has done a little testing with this thing and has
any comments that would be great. I'm hoping to use this for general portable work, though, not
just AO-27, so I'd hate to sink my $$ into an antenna which would be good for nothing else.

If you have any suggesstions for an antenna, or better yet, if you have one you'd like to sell me,
let me know! Currently my requirements are-

Light/Small:
I'm using a couple of stepper motors for the rotors, and I don't thing they'll handle much over 5 lbs. of antenna after I'm done with the mounting business.

Directional:
What would be the point of a rotor otherwise?

Dual Band:
I would like to be able to operate from 146-148 and 437-440 at least. Big plus would be 440-450 operation, though.

Duplexer:
I'm hoping to just plug this thing into my HT and go, without an external duplexer.
But this is only a matter of convenience. If you have an antenna/duplexer combo, I would be interested in the two together.

Other plus's woud include wider operating frequencies to cover the top part of 70cm and the lower
part of 2m, BNC connectors, and circular polarization.

Thanks,

Chris Buckley

Well I do know that the D stands for Digital voice recorder option. Don't know about the R. Also FT-50RD41B would be with digital voice recorder (D) and 5 watt output FNB-41 battery (41B). Hope this helps some.

> for an in-attic antenna than this little mobile Larsen?
Well, I don't know about the mobile antenna you're talking about, but in the small dipole I made works well. Maybe 4 1/2 feet of 1/2" PVC pipe, about 42" of wire(in this case some solid #14) and about 9 feet of Beldin 8219 coax(that's nice coax... I got it for free, it was previously used for a computer network, but he was getting out of hardware and moving to programming. I probably have 400' of the stuff). Works great when I stick it out the window in the attic... Took it with me on a trip, but being on the Oregon coast and not knowing the PL tones(and more importantly not having a radio capable of PL), I couldn't seem to get through to any local repeaters, and the normal ones were too far away... I could barely hear 147.32, which is way up high in the coastal mountains. Oh well...
Should've took one of my quads with me. But a dipole works great for 2m. Mine would probably do better if I could mount it on the roof like my ground plane... At any rate, the dipole was easier and quicker than the two quads I made(a 2 and a 3 element, made from wood scraps and #10 wire). If you don't have to hunt down tools like i do, you could probably turn out a dipole every 5-10 minutes... Or maybe 15 minutes max for some better quality antennas.

The DX70 has a BUM noise blanker, PERIOD! The mfgr as
>much as admitted it in an article just after it came out. They were
>supposed to fix the problem but you know how that goes.

I have to agree. I have an early DX70, and the noise blanker was basically useless - you couldn't tell if it was switched on or off. I did send it back to the factory for the 'fix' - which was free but it cost $40 to ship the radio and insure it plus having it away for most of a month. When it came back, I couldn't tell any difference. I was pretty annoyed. Curiously they wanted to know the specific range of cruise RPM on my vehicle so they could 'tweak' it best for use there. Makes me curious how that circuit works. (It'd be nice if they shipped a schematic in the manual)

Since then I've changed cars, from an older standard 4 cylinder 5 speed to more modern 6 cylinder automatic. The new car has worse ignition noise, probably because of the higher voltage of the new systems. In this vehicle, the noise blanker does make a noticible difference, but it's not always a good difference. While it suppresses the 'pops', it seems to do it by 'smearing' them - causing distortion to the desired signal. If the signal is pretty strong, it's not too bad (but then neither is the ignition noise in that case). On weaker signals, I find I often opt to run without the Noise Blanker enabled because I can hear more of the signal through the pops than I can through the smearing. Not terribly satisfactory. However I've done nothing yet to suppress any of the noise in the new vehicle, something I'll be starting the next warm and dry weekend.

In comparison, I've had an ICOM 706MKII in the same vehicle and also in other impulse noisy environments next to the DX70. The noise blanker on the 706 was much more effective than the blanker in the dx70. It wasn't perfect, but it was worth switching in, and on one particular buzzy noise on six meters it made it go away entirely. I was impressed. The DX70's blanker hadn't touched that noise.

I think the basic conclusion is that if you are going to use a DX70 in the mobile, you're going to have to suppress the noise at the source and not depend on the noise blanker.

Now, in some testing last night I found one of the worst sources of non-ignition noise in the new vehicle seems to be related to the flourescent display on the stock AM-FM radio. Anybody got a fix for that? (filtering on the radio leads? metal mesh filter across the AM-FM

display? :-)

I fully agree, the noise blanker in the TH70th sucks! I have a DX70th
and
the NB is disabled when in FM mode, both 10 and 6 meters. This makes the
TX70th
100% worthless for FM mobile operation. I guess they did this for cost
cutting
measurements. They wanted to sell the DX70th cheaper then the Icom 706.
Well
the word cheaper really explains the TH70th. The only reason why I still
have
it is because no one will purchase it for a fair amount per what I have
invested in it. So I'm stuck with it.

I have a '97 Chevy, 4X4 which is giving me fits. My Yeasu FT2500M is installed underdash and the stock wires are connected directly to the battery. The radio works fine when the engine is shut off, however when driving the radio will "hang" on a memory channel while in scan and I can not squelch it out. It just sits on the frequency making a hash sound. I can't scan while the motor is running because of this. It only happens on 146.700 and sometimes 146.520. 146.700 has no tone and the usual -offset. I"ve re-routed the power wires without any difference. I had an ADI-146 before I bought the Yaesu and it did the same thing. Has anyone had this problem who has solved it? I'd be grateful for any help.

Source record: 145308
Cross-posted to: alt.ham-radio.marketplace,rec.radio.amateur.equipment,rec.radio.amateur.antenna,rec.radio.swap

Create CD-78 rotary dipole for 75 meters. This is a reduced
scale antenna for 75 meters that will provide near full size
performance. Rated at 4 KW SSB, the single dipole element is
56' long and weighs 26.5 pounds. Fits on a mast ranging from 2"
to 2.375 " in diameter.

I had this antenna installed at 155 feet and it is a real
performer. Works very well especially if you are restriced on space
for a full size 75 meter antenna.

Asking $400 for antenna, would consider trades for other
ham gear or Pentium computer.

If another radio had the same symptom in the same car, then there are
a few probable areas to look at.

1. Can you pick up this same interference with a handheld? If so,
then there is little you can do except move the antenna (you didn't
mention where it was mounted on the car... if up front next to the
car's computer this might be your problem) or identify the source and
shield it, fix, or whatever. My bet is that you have a "no-hole"
antenna bracket mount up front near the dashboard/engine compartment
and you are receiving near-field emissions from one of the car's
computers when the vehicle is operating.

2. Try grounding your radio's negative power lead somewhere other
than at the battery. Ground the radio's negative power lead on the
car chassis at different points (closer to the radio itself with a
shorter lead) and see if this has any effect.

3. Do you have a noise-suppression kit already installled? An
improperly installed noise-suppresion kit can cause grounding problems
which can make these sorts of problems worse than they should be.

You need to find out where these signals are being generated and
determine how they are getting into your radio before the options open
to you are made clear. Use a scanner or handheld with no antenna as a
"sniffer" to find out where this stuff is coming from.

I don't know what kind of antenna system you are using, but if you can
access a magnetic mount antenna, you may try moving the antenna to
different parts of the vehicle and see if that helps.

You may also try "sniffing" around under the dash and hood with an HT to
see where it is strongest.

A friend of mine works for the County School board radio shop as a
technician. He has a 1995 Ford Explorer which is doing the same thing,
except on commercial frequencies. I also have a 1995 Explorer which as
it turns out was manufactured only a few weeks after his, and when we
checked it with a portable radio, mine was quiet and had NO noise.

He has had the computer replaced and still has the noise.

With todays cars and the computers in them, its a fact of life I guess
we will just have to learn to live with until the manufacturers come up
with a solution.

Good luck.

Andy

Thanks for reading my message.

I have a good condition Alinco DR-110T (2 meter mobile) with extended receive/transmit (on the public service band 130mhz-180mhz) and receive only on 300mhz & 800mhz. Doesnt cover the entire 300 or 800 mhz band however it does receive quite a bit!!
Radio includes mounting bracket, mic, and wiring harness. Sell cash price $150.00 + shipping OR trade for a dualbander in good condition w/accessories or possibly a 2 meter ht also in good condition w/accessories.. I DON'T want a HT with the keypad all worn and faded so you cant see the numbers.

Email if interested kc4oxp@flash.net

LOL - Laughing Out Loud. As in reference to the KR8ZIE - Krazy(think
back to the TV show called Concentration if you didn't get it yet).

As for this day and age with Lawyers advertising on the TV of almost
every TV station in the US and wanting to sue everybody and their
brother for the stupidest stuff, I could foresee a lawyer taking up
a case where a transmitter was used to save and individuals life, and
the person making the call for help didn't have authorization to
transmit on said frequency. A crafty lawyer would pull out all the
stops, and play it up in the media to get the general public behind
the cause for the way the agency that's pressing the charges is
acting stupidly against their client...especially when a life was at
stake!
If we really wanted to get technical, why doesn't the FAA cite
people(who've had to fly a plane and land it because something
happened to the pilot that prevented them from flying the plane) for
flying without a pilots license? It's simple, they don't do it
because the person not only saved lives, they also prevented a plane
from possibly crashing and maybe causing more harm!
To end this stupid thread, I'll do what I have to do if a life is
at stake to save lives and then take my chances with the FCC and
other agencies after it's all over with.

I don't own a TS-570, but it sounds as if you are having a problem with the release of the transmit/receive relay or whatever does the switching in that rig. It might have a solid state transmit/receive diode or other device. It appears that it is hanging momentarily. You might look into some adjustment offered in the rig that adjusts transmit release time. Or you might have it adjusted for instant breakin.

When you said you tried it with an external keyer, that ruled out the rig's keyer as the source of the problem and put in in the realm of the transmitter not releasing. Good luck and 73. w4vl.

Kenwood TS-940SAT with antenna tuner for sale. Just realigned
and tuned up in late 97 by Kenwood warranty station. Works great,
fine radio. $1150 plus UPS shipping in original box with manual.

Would consider trade for Pentium computer, laptop computer,
or maybe Icom 706 plus cash. Let me know what you have.

Here's what can happen if you deal with an a**hole on the newsgroups.

I was interested in a Yaesu FT-101ZD he was selling, but I was also checking
out a Kenwood TS-820S. I kept asking Andy Ross if the FT-101ZD had ever been
tampered with by any CBer's (CBer's like FT-101's and they will sometimes
monkey around with the RF circuits in their vain attempts to get more output
power from the radio). I kept asking, but he wouldn't answer me about this
issue. Maybe it was never used on CB.... but he wouldn't answer the
question. So I decided to go with the Kenwood.
Here are the E-mail exchanges:

Andy Ross (seller of FT-101ZD) wrote:
> > ok send the money order and correct billing address and i will ship it. Andy
> > Ross

Mark KB4AEP wrote:

Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

You might check GM for a possible TSB regarding interference generated by the Digital Ratio Adapter...a component mounted which (used to) be mounted behind the speedometer. These, I've read, were documented to produce enough square wave energy to land in the 2 meter band and depending on what your transmission/final drive setup is, will land on 1 frequency in one vehicle and another freq in a different setup vehicle. Think I saw something on amateur packet radio a couple of years ago concerning this.

Well, I guess you have never been in an emergency condition?

Four years ago, the Los Angeles area had a rather large earthquake (the
"Northridge" earthquake - 01/17/94). A friend of mine and I, both
licensed amateurs, as requested, reported to assist our local U.S. Dept.
of Veterans Affairs (VA) hospital. While there, the West LA VAMC needed
to contact the Sepulveda VAMC (within 3 miles of the epicenter).
Telephone service was still down (10 hours later) and the VA Police 2 watt
radios were insufficent.

Using our modified amateur equipment, the VA police officers, under ham
supervision, were able to contact the other VA hospital (using the VA's
assigned frequency).

Is that a violation of 47 C.F.R. 97? NO - 97.401(a) indicates that during a disaster, "an amateur station may make transmissions necessary to meet essential communication needs and facilitate relief actions." Additionally, 97.403 further says "No provision in these rules prevents the use by an amateur stations of ANY MEANS of radiocommunication at its disposal to provide essential communication needs in connection with the immediate safety of human life or ... property ... when normal communication systems are not available."

Granted, we limited the transmissions to the normally authorized frequency of the VA, and the VA officer present held the authority for that frequency, but that is NOT an amateur frequency. Had this not been during a disaster, yes, there would have been a violation. However, without prior modification of the radio, the communications effort would have been delayed and could have actually POSED AN ADDITIONAL RISK to human life.

You ask why? That's WHY! One never knows when a disaster shall strike.

> Personally, I would love to see ham-bands-only gear make a comeback in
> the modern world, with band-switched front-ends and such. HF receivers
> would perform SO much better if this were the case, especially if you
> throw in modern DSP techniques and top-quality filtering along with a
> nice, tight front-end.

So, while we're at it, let's have the FCC cancel 47 C.F.R. 97 subpart E (emergency communications) in its entirety. Therefore, since amateurs no longer have any emergency communications needs, I guess we don't need all that radio spectrum either. Let's let Congress sell it all and kill our national debt!
[Note: I don't support that position. It's offered only to show how absurd the above-quoted author is being. We all know that the U.S. Government is taking everything "to extremes" lately.]

Yes, the "mileage" can be ZERO too.

3279. Help: IC3SAT wide band mods

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-01 00:00:00 UTC
From: Julian Smith <julian.smith@virgin.net>
Message-ID: <354A424A.7932@virgin.net>

owwww doooooo,

I am trying to open one of these radios to wide band use. I know the 2 and 70 version uses diode matrix to set the limits. Anyone got the info for the 200meg unit.

Thanks.

Please reply in email, cos I don't read the news groups that often.

Jules.

> That is called interpetation. The FCC makes the rules, and the
> interpete the rules.
>
> What part of that do you have such a problem with?

Actually, the Federal Regulation ITSELF is the interpretation of the law
set forth by Congress. The FCC cannot interpret the law more than what
they say in their own interpretation.

If the law says "x" and the regulation says "x", then the interpretation
is "x" and cannot be "y".

If the law says "x" and the regulation says "x = y" then the interpretation
says "x = y" and cannot be "x = z" or just "x" alone (even though this is
what the law itself is).

If a law says "x" and a regulation says "x = y", the only way that the
interpretation can become just "x" is by Congressional action to "x" in
order to invalidate the regulation.

For those of you non-lawyer, laywer-types, if you want a real example
(although in another subject of law), look at this:
Is interest on a personal income tax deficiency where the deficiency
is based on changes to trade/business deductions allowable as a deduction?
The IRS said NO and made a regulation that always says that personal
income tax related interest is always personal interest (non-deductible).

In both the 8th and 9th circuits, there are cases which strike down that regulation as invalid. The courts have found the IRS WRONG.

Here, we have the FCC, not the IRS. However, the point is: It's not what the FCC says. It is what the COURTS say.

The instructions that come with the unit are pretty good. But following is a message from the first person I know to have installed one. It was helpful to me.

Phil

Subject:
Icom UT-106 DSP Module First Impressions
Date:
Sat, 18 Apr 1998 00:20:38 -0600
From:
"Jeffrey Knox" <jwknox@ix.netcom.com>
Organization:
Netcom
Newsgroups:
rec.radio.amateur.equipment

My post to the newsgroup that I had received the Icom UT-106 DSP Module for
the Icom 706MII generated roughly 47 messages to my mail box in the last to
days with lots of questions. I had not planned on installing the DSP unit
until this weekend but I did so thursday evening. I will give a brief
overview of the installation of the module, and what observations I came
away with after 2, 30 minute sessions of listening to signals on 40 meters.
I am not a technical writer, so keep that in mind. I got numerous requests
for first impressions and second most asked question was how hard was it to
install. I don't have any experience with DSP, my home rig is a Kenwood
TS-850 so the only things I know about DSP is what I have read and heard
from other hams. I have few pre-concived ideas about DSP. So here we go....

Installation

The unit comes with installation and operating instructions in the box and a
photocopy of supplemental installation instructions, it shows better
pictures of the install. Installing the unit consists of removing both the
top and bottom. Unplug the P1 cable from the top side of the radio, feed

it
along the side and pull it out on the bottom side of the radio. A small
white ribbon is feed thur the same opening from the top to bottom. To
get
the P1 cable through, it was easier to unplug the ribbon cable from the
top
side and feed it through to the bottom. The P1 cable you just feed
through
plugs into the J1 DSP unit, the cable that was already connected to the
DSP
when it was unpacked is feed through to the side to the top and
connected
to the J12.
Rehook the ribbon cable that was unhooked to get the cables along the
side
and install the new short ribbon cable on the bottom side and put the
covers
back on and your done. When you turn the radio on the functions are
available under the S4 display. The instructions are very clear.

Functions

The unit has two basic functions. ANF(Automatic Notch Filter) can be
turned
on or off and is not adjustable It works in SSB, AM and FM. The NR(Noise
Reduction) function can be turned on or off and works in all modes. It
also
has a level control NRL, this controls the noise reduction level from 0
-15.
When selected this level is controlled by turning the M-CH control. The
DSP
is an audio stage dsp and not IF dsp.

Observations

Both nights I spent monitoring on 40meter LSB, noise levels were running
S5
here and no optional filters were used.

ANF - The ANF was designed to attenuate beat tones, tuning signals and
most
single pitched tones. Thats why it does not work in CW and RTTY modes.
Listening to QSO's and hearing someone close to the frequency tuning up
in
almost everycase was eliminated totaly by switching on the ANF. I would
say
90% of the single frequency tone type of interference were completely
removed and the rest suppressed greatly. Signals that studdered or
woodpeckered came through with little or no filtering.

NR - The NR was designed to reduce the amount of noise and pickout
desired

signals buried in the noise. The NR function reduced the noise levels, on
strong signals(20 over 9 and up) the level could be turn up above level 10
and the noise was reduced to very low levels. The audio signals were also
reduce but not to has high a degree, meaning I then needed to turn up the
volume slightly. Not as good as FM but close. Moderately strong
signals(S6 - S9) benefit the most from the unit. As I increased the NR level
both noise and audio is attenuated, the noise at a greater rate. I now had
to increase the volume a fair amount more to be able to understand the
conversation, but copy was still good and 50-60% of the noise was reduced.
Weak signals with or with DSP were still had to copy. I generally found that
if I couldn't copy the conversation thur the noise without NR, then with NR
was not going to either.

One oddity that I found while using the NR level was that increasing the
noise reduction level sometimes the conversation would be readable lets say
at level 5, turn it to six and the copy would not be as good, increase the
level to 7 worse, then increase to 8 and it might get better. Did not
happen all the time, not sure if the audio to noise ratio actually got
better or was just a change in tone pitch? Need more time with it.

The operating instructions do say that if you turn the level up too high you
can cause signal masking and distrotion, and it does do that. Some weak
signals I listened to I was able to make them disappear even at level 10.

Bottom line on my first impressions, is it a cure for coping weak signals
from the QRN? No.....I'd say the NR function made copyable signals much more
pleasant to listen to by removing much noise but I honestly can't say it
helped pick weak signals out of the mud. I am sure it will increase the
pleasure of my mobile operating experience by being able to cleanup many of
the signals. After I have used it for an extended period of time or use
another radio with DSP, I am sure my opion will change to some degree. I
hope this was informative for those looking for a few answers.....

Exactly what, are you trying to clarify?

The FCC has interpeted this to mean any frequency in the HAM
spectrum. The FCC makes the rules, and interpetes them.

I don't know if you mean my context or the editorial's context -- in
either case, without reading 2369, we were both less than clear. :-/

However, 2369 itself is all too clear. read it yourself:

http://www.congress.gov/ and search for H. R. 2369

The part that bothers me is the changing of "intercept and divulge"
to "intercept OR divulge" when talking about prohibitions. IOW,
interception alone is illegal, with a list of exceptions. Any bets
on whether or not that list will shrink?

> Receive coverage of 900MHz cellular - whether in a ham rig or a
> scanner - is already illegal & has been for years.

I presume you mean "conventional cellular" or AMPS -- 824-849 MHz
and 869-894 MHz. The new changes may lead to receive blocks on
901-902MHz, 930-932MHz and 1850-1990MHz. FYI, the 33cm ham band
is 902-928MHz. (Block info from Richard Barnett's columm, same
issue of MT, p. 28) Any bets on how long that band will stick
around? I suggest that 33cm may become the "homebrewer's band."
But I digress...

> With the original
> HR1984/HR2369 dead, there is no immediate threat to scanners covering
> non-cellular bands.

But the revised 2369 passed 414-1 and is -- barring a major miracle --
gonna fly through the Senate Commerce committee and be law by this
summer. What happens after that?

> (of course, Congress could always change its mind
> next year!) With no prohibition against reception of non-cellular
> bands on scanners, there is no reason to prohibit their reception on

> ham rigs. There is reason to prohibit extended *transmit*. (for
> reasons already hashed to death here!)

Extended transmit is not my concern -- as far as I'm concerned, that can go altogether (with the small extensions needed for mars/cap, but there's no need for equipment to xmit on, say, 27MHz). In short, I agree.

Much of the point of the ECPA was to prohibit "interception" in the conventional cellular service. In fact, I seem to remember this prohibition extending to all mobile telephone services (including the old 150.xxx and 460.xxxMHz services), though I could be mistaken about those.

>FYI, the 33cm ham band is 902-928MHz. (Block info from Richard Barnett's columm, same >issue of MT, p. 28) Any bets on how long that band will stick around? I suggest that 33cm may become the "homebrewer's band."

I wonder if anyone out there has heard, or know, of any Win95 software, that would allow a Bencher paddle or similar, to be used as an input device to a computer (as a partial substitute for a keyboard). Although I am typist, a lot of my CW friends are not, and painfully struggle with their ASCII keyboards. These are 35+ WPM operators that could benefit greatly from a CW to ASCII conversion program that would allow them to overcome their non-typist handicap with a skill they already have. Any suggestions or thoughts will be appreciated.

HA, this is really funny. When this guy refers to a "mod" he really wants extended transmit coverage OUTSIDE the Ham bands. There's nothing wrong with his radio.

No smiley needed! The R9000 atually has a separate front end to handle 0.03-30 MHz that is rather similar to their HF receivers and transceivers, and uses the main synth divided down to improve phase noise. You could say it's both in one box.

Cheers

Yes, I do know how to read. I also know, that in any rule or law,
it is how that lawmaker or rulemaker interpets the law or rule.

The FCC has stated that the rules you quote, apply only to the
Amateur frequency spectrum.

That is called interpetation. The FCC makes the rules, and the
interpete the rules.

What part of that do you have such a problem with?

Laughing Out Loud. It's not a pro-sign, and is more commonly found on the internet than on ham radio.

Just as Ham's expect new members within the ranks to know a little something about the pro-signs, the internet user community assumes that the average joe is going to be able to figure some of those out.

Now, go out, and read up.

3315. TM-V7A Beyond MARS mod problem

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-01 00:00:00 UTC
From: jim <jimn@SPAMBLOCKeaglecomputing.net>
Message-ID: <3549D578.6A5B@SPAMBLOCKeaglecomputing.net>
Source record: 145404

A friend of mine in Brazil has a Kenwood TM-V7A he purchased in Miami this year and is having trouble completing the "Beyond MARS" mod as listed in the Kenwood supplementary info sheet ASI-0031.

R-546 has been removed, the green wires (W-501 & W-502) are connected, the voltage on the solder pads of R-546 is 5v/0v respectively so it is definitely open, and the radio has been reset. The radio's tx/rx range has not changed. The MARS/CAP mod (green wire) does work fine.

Is there a possibility of a different cpu or board in this radio as opposed to mine (the mod works great in my TM-V7A)?

Please reply to via email to: jimn@eaglecomputing.net or nyls@rio.nutecnet.com.br
Thanks for the help,

Dynaco Stereo 120 Owners - Last 2 weeks to be a Beta Tester !!!

Email me if you would be interested in upgrading your existing working or non-working Dynaco Stereo 120 amplifier to a Super Sounding Audiophile Quality Amp ready for the next Millennium ...

Bit contains all the parts needed and fairly detailed instruction manual. Rebuild the Dyna 120 yourself and beta test my Construction Manual and techniques.

Provide written feedback; test the completed rebuilt amp against worthy and expensive high end audiophile amps. Give your detailed impressions. Your comments < good or bad > may appear on my web site.

Looking for several more people to participate...

Half Price on Kits for people who sign up and get their checks in before May 15th.

See my site or Email me for more info.

Thanks,

Steven L. Bender, Designer of Vintage Audio Equipment

Had one. Great radio as far as features, ease of use, transmitted audio. Didn't like the slow scan speed or poor speaker audio output though. Also, no 800MHz public service receive. Has a nice display and well proportioned. Just the right size. Not to big or small. If it was louder and scanned faster I would still have it. Got rid of it and bought a TH-G71A. Love it.

My recommendation is that you put a good external antenna on your vehicle....heck 5/8 wave magmount maybe.....then run it into your handheld radio. MUCH BETTER performance and no heavy RF exposure....And you have the best of both worlds. This is what I do anyway.

>England. Music and all! Anyone know what or where this is coming from?
>
>Bill W2BLC
>
>Bill:
Do you hear this station during the day?
Try listening to 660, 790, 990, 1310 or 1320Khz to see if you hear anything that matches the program. Do you have a station locally that matches the programming?
Also try and listen at the top of the hour to catch an ID. You might even want to record it to listen to the ID several times for a postive ID.

If the station is not local and you can ID it you should contact the radio station in
question. The station may not even be aware it has a problem or the engineer
may have noticed something slightly small problem that your information may help
in getting to the problem.
Hope these ideas help. Good luck in your detective work.

I had the rig into Kenwood on Friday. They changed the internal keyer's CPU (obviously avoiding my comments to them about the fact that the problem happens with an external keyer as well) which they claim is the ONLY fix to this problem. The new CPU did not solve anything and Kenwood is basically claiming that the problem is something I am doing to cause RF (strange since this is the 1st and only rig I have had this problem with). They refuse to give me a new rig.
The retailer has not returned my calls.
Nice support eh?

3339. DX-70 Mobile Noise Problem

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-02 00:00:00 UTC
From: agiroux@cvn.NET
Message-ID: <3.0.5.32.19980502111908.007a2940@mail.cvn.net>
Source record: 145170

I have only had my DX-70 for a month. It is bolted into my Ranger Pickup and has been since the third day I bought it. I bought it at a hamfest where I was able to compare the 'mobile' HF rigs.

I do not degrade the other rigs. I think they were all wonderfull radios for todays market. But one thing the DX-70 had that the others didn't -- an easy to use, detatchable control panel. Of course you can't value mobile noise levels in a hamfest sales booth.

The IC-706 was probably the most feature rich of the bunch. You pay extra for all those features and it has a very busy faceplate. Just too many buttons to be playing with in commuter traffic.

The TS-50 has good HF features and an easier control panel, but no 6 meters or detatchable head.

Yeasu didn't show at this hamfest. It was too close to the Dayton show and they were busy getting ready for that. So was Kenwood, but they had a display going where we could compare products. Adds to my negative feelings about Yeasu, but that's another post. One vendor had a Ft-900 in a box that sat there & looked like a Ft-900.

The DX-70 has a control panel that is manageable in traffic. Yes, it has it's detractions. They all do. Eg; if you're planning on working a lot of 6 meter repeaters with it, don't bother. 6 meter repeater split works great, but the CTSS tone controls are rediculous.

As far as the noise blanker working, it works fine on my set. The four setting feature on it is one of the best I've seen. Even better is the adjustable IF filter passband. But then, I'm not one to use Noise Blanking to cover up a vehicluar problem.

My Ranger had a noisy ignition system. Change your coil & spark plug wires -- $26. I bought 6 spark plugs and replaced them one at a time until the third one dropped the noise level by two S-units. I returned the other three to K-Mart (plugs - $9)

Insuring grounds between engine - chassis, tailpipe (exhaust end) - chassis, body parts - chassis, etc -- dropped noise level another 1.5 s-units.

So now my vehicluar noise level, away from other outside sources, is less than two s-units.

Other outside sources:

Various power line transformers along the route: 5 - 9 s-units
Our High School's Flourescent sign: 10 over 9
Railroad crossing: 10 - 20 over 9

Numerous farmers electric fences: 7 s-units - 10 over 9

I notice that good incoming stations can drown out noise levels. But the gist of it is:

Just like you can't solve measles with makeup -- you can't solve noise with a noise blanker. You have to get to the root of the problem and fix it.

One fellow suggested to go to a mobile radio dealer to get suggestions on how to solve the problem. I talked to a friend who was the field repair tech for the Highway Patrol. He not only deals with ignition noise, but also all the open digital devices thay are jamming in the troopers cars lately. He's the one who made sure all my vehicle grounds were in place.

IMHO, the DX-70 is great. The others are good too. Shop around ask questions, etc. I'm not sorry I bought mine and I bet it lasts as long as my other radios (an 18 year old TS-520S).

Tony -- WD6AXL/3

>provide essential communication needs in connection with the
>immediate safety of human life and immediate protection of property
>and when normal communication systems are not available.

Yes, this is precisely the correct interpretation of the rule. It applies
only to an amateur radio station, which is defined as a station operating
in the amateur radio service, IE on amateur frequencies.

>But when it comes to operating outside the ham bands, I believe that
>hams have no more rights than an unlicensed person to do this,
>although they certainly might have greater means and knowlege to
>achieve it.

Also true. When operating outside the scope of Part 97, which you would
be if you were operating on Public Safety Service frequencies, Part 97 has
no force. You are no different from any other person unlicensed for the
service in which you are operating at the moment.

>The fact is that when it comes to saving human life, most people will
>go to *any* lengths, including breach of the law, to achieve that
>goal, such as when speeding an injured person to the emergency room.
>But if you're then brought to account for your actions, just plea the
>emergency circumstances in mitigation and do not try to plea that you
>have any particular FCC permission on account of your license.

Also true. This is the legal doctrine of "the lesser harm". This doctrine
says it is a defense against breaking a law if in so doing you prevented
a greater harm (and you can show that there was no reasonable
alternative to breaking the law).

>Claiming you have permission would not be true and I believe that
>raising such a false defence will only harm your genuine and best one.

Again true. Part 97 only applies to the amateur radio service. It cannot authorize activities in another radio service. The rules being waived by 97.405 when it says "these rules" are the Part 97 rules. They are *not* the rules of another radio service that are being waived.

OTOH, I've had no problems with my relatively old TS-570D (owned for abt 18 mos) on CW (int/ext keyer) or SSB. There have been reports of problems similar to yours with the 570 which have been cleared up by addressing RF issues.

It is often rig dependent (RF stuff). I had one rig that would always go into xmt when my 2m packet node was accessed. Did a change out and the problem went away. Then I fixed it with the original rig by added grounding and some shielding (all external to the rig). BTW -- neither radio was the TS-570D, which I've had NO trouble with (knock on wood!).

Not associated in any way with Kenwood, BTW.

Phil

Hey there...

I have the following items I will either trade as a whole, or in part. I am looking for a dual band HT, but would also be interested in a scanner, or ??? If you have anything in mind, please email.

1. Uniden PRO 810e Base AM/LSB/USB 11 meter rig. RF Gain, Mic Gain, Clarifier, HI Cut noise filter, S/RF Meter, build in power supply. Can be converted to 10 meters. Also has a BRAND NEW hand mic. As a bonus, I'll also throw in a new RS SWR/Power Meter. All in excellent condition, virtually no scratches.
2. Realistic HTX-202 Portable HT w/ battery pack. PL En/Decode, DTMF En/Decode, etc. Good condition with rubber duck antenna.
3. Two Motorola Spirit Monitor Recievers. Both in very good shape and both with NiCAD batteries and charger. Currently set to 138.325 MHz, can be set anywhere 138-174 MHz.
4. General Electric UHF Business Band HT w/ NiCAD battery. 2 watts, 2 channel capability. Channel one programmed to 466.437 MHz. Channel Guard feature (PL En/Decode). W/battery, UHF Rubber Duck, and belt clip. Fair Shape, works excellent.
4. Motorola TeleTAC 200 Portable "Pocket" Cellular Phone w/ NiCAD battery AND Car DC Power/Charge Cord. Very good shape, works great.

Would be willing to trade anything here for ???. Please email. Thanks.

Message-ID: <01bd7610$1e16b1c0$b3431ecc@utbpoqki>
Source record: 145206

I hope someone can help. I bought a setup at the local flea market but I don't know what it is.Let me describe it to you all. It says radio-telephone interface unit on the front of a rather large black metal box 15''w x 3''h x 12''d and the model is an ST-40 hyperdyne I guess it is a Johnson as hooked up to it is a E.F.Johnson radio with a telephone jack on the front.I can't find any numbers on the radio part but it has a set of buttons that say v / a / s and system and group.The large setup also has a phone jack on it and the whole thing looks like someone wired it all together with a big and I mean Big ac to 12volt dc transformer.It looks like a professional job inside with the hookups all soldered perfect and neat.I can only guess what this thing does,nobody I ask knows anything about one except to tell me you should be able to make phone calls over my radios with it.Is this correct? how does it work? Can I use it with my transmitter / receivers.Is it A.M. or F.M. band ? Any and all info would be greatly appreciated or point me in the right direction please.I only payed $20 for the thing and it powers up fine and makes my nearby radios go crazy but I pick nothing up scanning it for freqs. Thanks, Len

The new iCOM T8A HT, Tri-band with a 5w output. Complete with:

original box
all paper work, manual, & warranty card
rubber duck antenna
battery charger

new cost $349.00 Will sell for $319. + shipping

e-mail if interested

3381. Re: Any Mods For Yaesu FT-101B??

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-02 00:00:00 UTC
From: Tamarack Greenman <tamarack@cei.net>
Message-ID: <354BA8B2.3F7514C5@cei.net>
Source record: 145212

To get 11m (the only reason I can see you would want out of band)
you need to replace the 10m xtals
you can replace 2 of them and move the other 2 so you can still use it
on 10m too
i.e. for 11m
in slot put in
10a put in xtal for 27.000 to 27.500
10b put in xtal for 27.500 to 28.000
10c put 10a xtal in this spot
10d put 10b xtal in this spot

you don't need to do anything else. just tune the radio the normal way.

There are also mods (adding xtals and tweaking coils) to give the warc
bands.
I have them filed away somewhere, I will see if I can find them.

In a side note.......
You may just be better off selling (or giving away) the FT-101
and getting a newer rig with general coverage. The price is dropping
all the time.
i.e. NEW Alinco TX-70T is under $800
I have seen rigs a few years old (like Yeasu FT-747) selling for $400 or
less.

For Sale, Henry 2K-2 Amplifier

I have a Henry 2K-2 floor console Amp for sale. It is in very good condition. It runs a pair of 3-400Z tubes that have full output 1400+ watts output. It works on 10 through 80 meters. Has tuned inputs. It uses forced air cooling with chimneys on each tube. It will run eater 3-400Z or 3-500Z tubes. Very clean inside and out. With book.

$700.00 or Trade for HF Rig ??

Will not ship, but would meet within 200 miles of Eureka Ca.

I've had many helpful messages from the group

Thanks everyone for your reply's regarding my ADMS unit failing to
allow data up/dwn loading to my Yaesu VX-1R.
I have tried all your suggestions and still no go. However RT Systems
say that my unit serial No 7F012025 falls within a range of suspected
problems and could require a CPU & parts change to get it to operate.
This unit was purchased from Juns in Calver USA in Oct 97 & for
whatever reason they wont respond to my email for help. Has anyone
any clues how to get a response from them.

I moved my mobile Yaesu 8500 rig into the house (car theft is rampant around here), along with my little Larsen dual-band antenna.

Would a half wave or qwave dipole (made from Beldin 9913) be better for an in-attic antenna than this little mobile Larsen?

One of the main reasons I am considering a dipole is the thickness of my Beldin vs. the thin Larsen cable.

Any opinions are appreciated!

My Yaesu FT50R, if modified, would also double as a very handy marine radio when I go on my boat. Too bad it's not type accepted.

The FCC relaxed regs on marine radio licenses because it's been fairly proven that having a VHF marine radio on your boat is better for everyone. They don't require it for all vessels but want to encourage as many people to have one.

I have a 13' Whaler that I take on the Hudson River once in awhile. I won't shell out for another VHF handheld marine radio. But if I could have marine radio capability with a resistor clip here and a solderblob swipe there, it would be useful. And - you never know - could save a life or two.

That was really stupid. Why don't you just post your social security
number too?!

BOWERS, BLAKE E
13xxx ST xx 17
Wxxx xxxxxx, MO 6xxxx
(4xx) 2xx-xx77

This is what comes up under KD4RME, and is why one does not post one's
call sign when he is trying to antagonize and troll on a newsgroup.
Your lucky I'm not mean enough to post it uncensored.
You DO know that you can get that license taken away from you now that
you publicly showed that you do not know the rules! I would suggest you
call the FCC at their toll free number and ASK them about this issue.
Read them the part I posted, and have them explain what it means to you
since you missunderstood it.

The 737 also came equipped with adjustable power output.

The 737A had an improved DDS synthesizer, although the 737 receiver was
just fine. The newer DDS synthesizer permitted finer tuning increments.

Havn't seen Windows programs for RTTY. If the code is written in a Microsoft version of BASIC or C, it's simple to recompile them with the Windows switches on. Not 100 percent Windows but you can take advantage of memory, cut and past and multitasking.

Best program I've found is BTL 1.51. Need a sound card but it really will dig down and pull a signal out of QRM.

Hi!

Shoulndn't be a problem, some friends of mine are using the A99
for a relay station on 29.660/-100KHz shift and SWR is nearly 1:1.
You have to cut the last element for the proper length.
If you cut the length for 29Mhz the SWR on CB will not be the same
anymore ;) You have to decide wheter you want 10m or 11m. The bandwith
of the antenna is not enough for both bands together...

Bye!

That's normal for the older versions. There are newer versions with a
newer revision of the digital board. This ones don't have this problem.

bye

Hello:

Looking for a manual for a lo-band (42-50 MHz)
Motorola Mitrek mobile model T51JJA 3400 BK.

The manual MUST be for the "BK" suffix.

Would prefer the entire manual (mobile PLUS
control head/cable/speaker/mic/etc) but will
take what you have.

Please let me know what you have, and the
condition and part number (i.e. 68E81045E65-O)
of your documentation (located on the front cover).

Will pay your price and shipping for the manual
that fits this radio.

Thanks de John WB6GHA

Hello all

Due to a recent change of address I am selling my TS440sat
GWO with one small scratch on the lid,I have put a new front
panel on so it looks almost new.The atu is fitted and works
well and there is the 1.8 ssb narrow filter and the mobile
bracket with two power leads and comes with box and service
manual.If you collect I can also throw
in a home brew tilt over tower with winch.I am looking for
about 700 uk pounds but open to negotiation.

Please reply by email only nigel@mfp1.demon.co.uk

For Sale - Must move before Dayton - Would rather ship UPS than carry to flea market!

Heath SB-200 1 KW amplifier, 80 thru 10 meters, in excellent condition. Full output 572Bs in final (800 watts out with Collins 32S-3 driving it). No manual.

Front panel, knobs and meter are immaculate, cabinet has no dings or scratches - just a couple of typical slight "age spots" that Heath cabinets get.

Asking $325.00 plus shipping from 44134.

An external antenna deals with that. The more pressing problem is not enough power. You'll make everyone monitoring the repeaters unhappy with your scratchie fading signal. 35-45 watts will cure that. And you will be unhappy with the low audio output of the HT, makes it hard to listen over the road noise. A mobile rig with a real speaker will cure that. In other words, a HT is a poor mobile rig, get the real thing.

Source record: 145088

Have had one (TH79E version) for a few years - no problems at all. (As I've posted in the past). Very reliable - but could have done with an illuminated keypad.
If your 800Mhz rx is important, as it seems to be to so many US citizens on this newsgroup for some strange reason, then buy the European version (TH79E). Cut the green wire and Bingo! there it is. You can tx outside the European freq allocation (which fits in with another debate!), so you would have full tx for the US bandplans. Auto repeater shifts would be set up for across here, but not such a problem if 800Mhz rx was important!

Sascha, if yours packed up after 2 months, then whether no one can fix it or not is unimportant - the fact is, it would be under warranty. If it was 2nd hand, then what abuse did it get prior to your ownership? Perhaps the fact you were told it cannot be repaired (?) is more a reflection on the dealers/service centres you have contacted?

You weren't thinking of just using the rubber duck antenna were you? Even if you were, RF exposure would be much the same as walking down the road using one!

Hi,
I have a Icom 27-H that is working fine, EXCEPT the LED display. I am unsure if the problem is in the display or the chip that drives it, however if you have an old IC-27, 37A, or 47A (the LEDs are the same) that failed for some other reason, that it sitting around in you way, just taking up space, and otherwise annoying you (or your YF), this could be your OPPORTUNITY OF A LIFETIME, YOU may HAVE ALREADY WON!!! (Oops, forget that part about winning, I just got carried away, you didn't win anything, and I am sorry that I even brought it up.)
Nevertheless, perhaps we CAN help each other out by me sending a little money your way and you sending your junk my way. Plus, we can keep one radio out of the local landfill and HELP SAVE THE EARTH FOR OUR CHILDREN AND GRANDCHILDREN!! (Yea! That's the ticket. Yes it IS hyperbole, but in THIS case, it is at least TRUE hyperbole.) ;->

Thanks for reading this. Even if you have no interest, I hope you enjoyed my bs.

Best of Luck & 73,

Don W9DEW

>2nd hand, then what abuse did it get prior to your ownership? Perhaps the
>fact you were told it cannot be repaired (?) is more a reflection on the
>dealers/service centres you have contacted?

Yes.Alan,I contact Japanese main service and German service and they
told me to buy another one.I have purchased new one but here in my so
called country we have not authorized dealers for Kenwood so no
warranty,but that is not a point.I cant imagine that Kenwood refuse to
repair my handheld (its no matter how money will be cost).
So I sell it for 50 dollars and buy Motorola GP 300 with keypad and I
have just only thing to say Bye forever KENWOOD.
Regards Sacha

Message-ID: <01bd7699$9241c6a0$c697accf@fossil>
Source record: 145097

Sorry folks -- My last attempted posting had a bad reply-to address
imbedded in it. This should work better. Please pardon the "rebroadcast."

For sale: Very nice Timewave DSP-59+ in excellent condition. Works great!
Kills hetrodynes, reduces noise, filters out adjacent frequency QRM with
steep-skirted filters. Works with SSB, cw, and digital modes.

Included are all cables, manual, and box. At no extra charge, I could toss
in a 12 VDC @ 1 Amp power pack if you need one. (Timewave suggests you use
the DC output of your EXTERNAL transceiver power supply, if you have an Amp
to spare. The power pack is an alternative.)

Selling for $180, and that includes shipping and insurance to anywhere in
continental USA.

E-mail Steve W3SY at STEVE.W3SY@EROLS.COM

73 to all,
Steve W3SY

>
>

Unfortunately, HT antennas work crummy inside a car. An external antenna would be a start, but I agree with the comment that the HT might still be underpowered and inconvenient for mobile use. I would also recommend a mobile rig. If you are on a budget, a single band rig like a Kenwood TM261A might do the trick. They're now going for just a little more than $200 new!

On the subject of HT's, one of the best things I ever bought for my HT was an AEA HR-1 "Hot Rod" half wave telescoping antenna. The rubber duckie is a dummy load compared to that! MAJOR improvement in transmit and receive!

Good luck!

> An external antenna deals with that.

EXCELLENT advice - an external antenna makes a world of difference!

> The more pressing problem is not enough
> power. You'll make everyone monitoring the repeaters unhappy with your
> scratchie fading signal. 35-45 watts will cure that.

QUESTIONABLE advice <grin>. We don't know what's happening for this gentleman in his neck of the woods to be able to make that suggestion for him.

For example, I live in a Southern california valley where i can his all I need to with a single watt or so to hit scores of repeaters.. I don't mean to brag - but I just happen to live in a very repeater-rich area. So I do not need "35-45 watts" to accomplish anything!

So let's tell gary to JOIN his local Amateur radio Club - and discover what's happening in his area. THERE he will receive excellent advice from those performing the same types of communicating that he desires!

3471. Alinco DJ-580 crossband

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-03 00:00:00 UTC
From: Ken Bickel <ac4vvNoSpam@qsl.net>
Message-ID: <6ii6vkcks1@news.megsinet.net>
Source record: 145120

Am attempting to crossband repeat with the Alinco DJ-580. However, if the repeater I am trying to crossband to has an PL tone, the radio apparently does not transmit the PL tone. Even though the 580 is transmitting on the proper repeater input frequency it will not bring up the repeater.

I have tried both a full crossband and one way crossband (input on 440 and output on the 2 meter repeater's input frequency. I have also tried setting the PL tones on 440 the same as the 2 meter repeater with no success.

Anyone using one way or full crossband repeat using the 580 and accessing PL'ed repeaters?

Ken, AC4VV

This would be a KVG XF-9B, which were common in homebrew projects years
ago. I don't know about recently.

From the 1976 ARRL Electronics Data Book, from information supplied
by the US distributor:

filter type: XF-9B
number of crystals: 8
6-dB bandwidth 2.4KHz
passband ripple: <2dB
insertion loss: <3.5dB
term. impedance: 500 ohms
ripple capacitors: 30pF
shape factor: 6:60dB = 1.8
stop-band atten.: >100dB

Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc

Hello. As the subject stated. Anyone interested? I tried to sell it a month or 2 ago, for 500.00, but everyone was hooked on the TS-830S Golds going for 350.00 (which seems a quaint bit odd to me). I guess the new rigs are just too appealing with their ease of use and computer controlled functions, of course they can't handle high swr, temp extremes, 160M, etc., but that's just IMHO. Anyway, anyone interested can e-mail me. Anyone in the Buffalo are especially, I will be happy to deliver and demo the radio. Thanks for your time,
Loren C.
KB2WYL
Or, if anyone will be in Dayton, and is interested.....

From: <>
Message-ID: <354caeed.0@news.snowhill.com>
Source record: 145124

I have a 2950 in my p/u, If you don't have large enough wire to it, direct from the battery, not the cig lighter, it will jump freq. especially when key up. I had that 22 ga. wire to it, it would jump. I put a 12 ga. wire to it, it works perfect now. Use 12ga. wire on both - ,+.

3476. Antenna Relay for DTR-2000L

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-03 00:00:00 UTC
From: k3ph@dxis.monroe.pa.us
Message-ID: <EsE7EH.218@dxis.monroe.pa.us>
Source record: 145125

I have a 20-year-old Dentron DTR-2000L amplifier and it looks like the antenna changeover relay has finally bit the dust. Anyone have any recommendations for a replacement? The relay is a 3PDT relay, open frame, 12 volts DC with a 110 ohm coil, with 8A contacts. All this from reading the markings on it. Unfortunately, I can't seem to decipher the manufacturer or part number! 8^(

While I'm thinking about it, maybe someone can explain to me why high power HF amplifiers don't use carrier operated relays, like the VHF/UHF bricks that I've seen?

Thanks in advance.

72/73,
Bob

I bought an Alinco DJ-191TH and I love it. I pedistal mounted it on the floorboard fo rmy Ford Ranger. With a good external speaker, hand mike, and 12vdc from the truck battery I do very well with 5 watts. I run a Comtelco 5/8 wave mag mount. I also got a 35 watt amp.

I needed both a moble and portable and could not justify buying two radios at the time. It is a hassle to keep taking the portable out and putting it back in. I am looking to but a mobile in the future.

>look for and what features to look for.

What you want is called a shortwave radio. Radio Shack sells a
couple of fairly inexpensive ones which do what you want. You
can buy a fancy expensive set later, but the RS portable will
work well enough for casual listening. Some people consider
it good enough for fairly serious listening. Realize that shortwave
is not like AM and FM broadcast. Signals will vary with time of
day and frequency. You'll have to learn where and when to
listen. A simple portable is a fine way to do that. A more expensive
radio won't be able to hear a station when the propagation isn't
favorable either. So spending more money doesn't necessarily
mean you'll hear more.

Dear Glenn: I, too, am getting used to my IC-706 MKII and also like it so far. The main trick I know is to make an index for the owners manual. I made such an index on one page and it has helped incredibly with getting used to the radio. I also bound the owner's manual with cardboard covers using clear contact paper--the index page I put on the back cover. If you want a copy of the index page, send me an SASE and 50 cents & I'll be happy to copy for you. If you plan on using your radio with a non-ICOM linear amp., contact ICOM America and they will send you out of packet of ideas how to facilitate this hookup. 73, Jerry S. KB2QIU

Another concern is the ware and tare of the handheld, if it is both a moble and portable radio. I find that the antenna coax goes bad a lot quicker when it is constantly being handled and the antenna connection in the radio its self will wear, and might even break it from the board. This is a simple repair job.

Hi Ed,

Given the transient nature of your interference, suppression at the source is a problem for which I have no good answer. Even if jamming was legal it wouldn't likely help. You would interfere with yourself! Would also probably elicit even more from the truckers in retaliation.

All may not be lost. You might be able to make your system more immune to the signals. Not a bad idea, since fully legal signals, should transmitters pass by, can cause the same problem. The amp is acting as a receiver as well as an amp - it shouldn't, but apparently is.

A likely point of entry for the interference is the power line. A GOOD filter on the power line where it enters the amp may help. Beware of "junk", cheapo filters. Another very likely point of entry is the input line (guitar?). "Bypass capacitors" of the right value at amp (and maybe instrument) will short-out interfering radio freq, but not the signal from the instrument. Exact values will vary with details, but would expect 500 pf -to- .01 uf will be the value needed. Another trick is to slide ferrite beads over the line and instrument cords.

Woody

Greg,

You are talking about shortwave, and you might check rec.radio.shortwave for more info. Several good radios exist having the features you describe. The Sony 2010 is AM/FM/SW, and a lot of radio. It's portable. You can find them in good used condition for about $200. The Sangean 909 and 818 are also good radios, and radio shack sells them with their nameplate on them for less than the Sangean branded ones. You should get a radio with synchronous detection and selectable sideband, for improved reception and coverage of amateur, government, and utility stations as well as shortwave broadcasters. Hope that helps

Will

Good Advice,

I started with the TS-520S. It is very similar to the TS-830S (which is a great solid radio). The 520 can be had for about $250. It does not have all the features of the 830, but it is also solid and about half the price.

Hi
I have two I am willing to sell an Icom IC-202 with manual works fine
but the nicads are a bit tired(c cell size) $150 and a Belcom LS-202E.
This little gem is a handheld FM & SSB that was sold only briefly in the
USA under the Santec name. There is a review in the December 85 QST.
Comes with complete documentation. I will scan some stuff in on it and
post it in a week or so. Have never seen anything on the market like it
before or since. I used to use it backpacking but have tapered off a bit
on that and been thinking about selling it. Price TBD

Why worry about it? If people buy this crap then they have got their own reward, haven't they?

It is the law that is the problem..... If these rigs were made to cover 26 to 28 mhz, with eprom programming to disallow easy mods to 10 meters, then the ham bands would not be impacted by these "operators" at all.
Let's face it, folks, the 11m band from 26 to 28 mhz is FREE. Nobody uses it except the outbanders; nobody wants it for any commercial purpose ANYWHERE! The use of 11m for FREEBANDING is a global thing, not just a local thing. There is a problem with misuse of the 10 meter band, but that has more to do with the type acceptance process, and the inability of government agencies to deal with the FACT of 11m operations than any other factor. These people would not be there if their radios were not made to go there, as a legal dodge.

Leigh wrote in message <6ilomkrrb1@news.rain.org>...

Your instinct is correct it is a glorified CB radio. It can be
freebanded yes.
It is the same basic radio as a Cherokee (CBS 1000 i think is the model)

After mod its 25.165 to 29.695 (i think) it has a +5 and -5 khz swithc
and about
-3 +7 "Clarifier" slide.

These are CHEAP quality units (look at the price, ya get what ya pay
for)
They do work, I have talked to them on 10m and I have used them myself.

I guess it depends on what your budget is. Personally I say IF you can
afford
a bit more then get a good used rig (I saw several posted today for $400
or less)
If money is a big issue then go for it for now (you can sell it later)

Hams moved cabbies off 10M in NYC by sending CW QRO. Not likely that we'd get 26-28MHz though. I wish we'd get more BW around 10MHz, that would be great, add another 100KHz or so to 30M.

> Jay -- W6DXR

Hi Jay,

I have had my 570 for about 6 months. I work CW often and have had a couple of occasions where the transmitter would just stick on and transmit one long dash until I hit the the dot side of the paddle. I am sure my trouble was due to RF getting back into the rig, because moving the antenna tuner or re-tuning the tuner would clear up the problem.

Are you operating break-in mode? If so do you still have the problem in non-break-in mode? It might have something to do with your break-in timing.

Steve,

Check out any good electronics outlet for the connector. I used a
standard 12 prong Jones plug years ago to make a DC cable. Cost in the
late 70's was about $2.50 so figure 7 or 8 today.

Mine has the original tubes (Dentron on the base) but, apparently, it has lived a sheltered life.

I get 1300-1400 on 75 and ~900 on 15. I don't have the 10 mod kit installed on mine. I'd say you are getting about the right amount. BTW, these tubes run about $240 for a matched set. Not too bad an investment for a rugged amp. Mine runs 2700 on the anode.

3553. Quit wasting time. Learn code! HF is great.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-04 00:00:00 UTC
From: Tom Nicastri <tnic@IDT.NET>
Message-ID: <6il06m$p3e@nnrp2.farm.idt.net>
Source record: 144985

While the flame wars rage about code... just wanted to say

HF is worth the effort. Im not for code or against it. I am for HF and had to learn code to get HF. Had I waited I would not be on HF.

I was a no code tech for a year or so before some friends urged me to upgrade. It took me 12 weeks to learn code.

I was foolishly wasting time kidding myself/hoping the code requirement would be dropped.
My friends who are waiting for code to be dropped still are not on HF.

For the written General I used the ARRL book and the Gorden West book together. I also used the web based tests to see how I was doing.

Finally I purchased Quick Code tapes (I also used New Morse code program for my computer. I bounced back and forth between the tape and program to avoid getting board.

The tapes were at first fun, then annoying but by then I was committed to their method (and it was working). The program allowed me to do lots of drills. I down loaded the Constitution of the United States into New Morse and listened to it for practice.

I learned the alphabet in about 2 weeks. Numbers really gave me a hard time.

I hit the brick wall several times for days unable to learn another character until I finally broke through. This is normal so dont give up.

After 8 weeks I was still crawling along at 6 words /min. And loosing interest.

Until a friend told me to pick a test date and shoot for it.

I did and it was only 2 weeks away. I listened to the high speed tapes 3 times a day (20 min. each time) and more.

I crammed like crazy. It was hell. Was it worth it? Y O U B E T C H A!

A friend lent me a 20 watt - 25 year old Yaesu FT-7. It puts out 20 watts when the wind is blowing the right way.

My first contact was a guy 3000 miles a way! Since then I have not had a good nights sleep. Im blabing on the radio at night.

I put up a SPI-RO trapped dipole wire antenna and blab every night with a friend 1000 miles away with several other guys.

I picked up a nice 100 watt Yaesu FT-847 multiband HF rig to reward myself.

Now I have an SGC-2020 on order which I will be using on a Kayak trip to keep in touch with these guys while I'm in the middle of nowhere.

Quit wasting time worrying about the code JUST DO IT.
Once you get your General you will realize you were crazy not to get it sooner.

Its that much fun. My furthest contact was Sweden. Little more than an exchange of call signs but a contact none the less.

I work odd hours - On VHF & UHF I could never find anyone to blab with late at night. On HF there is always someone on (its always morning somewhere).

I cant say if code is good or bad. I cant say if code will be dropped of kept.

I can say HF is great even if you have to learn code (or chew broken glass).

My friends who are waiting for code to be dropped are STILL NOT ON HF.

Quit wasting time your missing all the fun.

Go too it I hope to get an email from you telling me when to meet you on the air!

Hi-

I'm about ready to purchase a GOOD communications receiver, with continuous coverage, a desk model.

I have my eye on Kenwood, Yeasu, Icom, and others (Even a HQ-180, if anyone has one they want to get rid of!).

I'd like to see this stuff in person, and possible in action before I buy.

I'm in S.E NY State, right at the tri-county (Orange, Ulster, Sullivan) borders, and close to the Tri-State (NY, NJ, PA) border.

Anyone know of a place close enough (2 hour drive or so) that has a decent line card so I can check some out?

3555. TS-830S Power Output

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-04 00:00:00 UTC
From: pwentzel@minn.net
Message-ID: <6il4ce$6bm$1@news.minn.net>
Source record: 144987

I recently purchased a TS-830S "fixer upper". After a lot of elbow grease, repairs and tuning it now seems to be in fine shape. What has me puzzled is: The "fixer upper" will output as much as 145 watts into a 50 ohm dummy load, while the TS-830S I use as my rig will only max out at 105 or so into the same load. Both radios are re-tubed, neutralized and peaked. The fixer is a serial number 1xxxxxxx and my rig is a serial number 3xxxxxx.

Both units output equal power when the plate current is dipped to the same reading, but the old unit just keeps outputing more and more power as the loading is increased. I get a fairly pronounced dip at well over 300 mA, while the newer unit starts to "mushy dip" at anything over 230mA. I've spent considerable time inside each radio, and observed that the output tanks circuits appear to be the same. The screen and plate voltages are almost identical.

I'm not interested in trying to squeeze more power out of my rig (I'm sure 145 watts is really cookin' the 6146b's), just very curious as to what is happening here. Anyone have any ideas?
73,
K0PW

That is awesome Tom,I have owned tm-732a 's,733a's,now tm-v7a's.Both mobile &
shack.
I love mine,my V7a's,cant wait till the software comes out in summer for the
pc programing.
I would never go back to a 733 after all the new improved features on the
v-7a.
The Voice module works wonders in the mobile,so u can keep ur eyes on the
road,not the pretty blue face.
Also the mic control has the 733 beat by far....
I think ur offer Tom is cool.
I'm tired of all these hams pissing and moaning about the V-7a,display..
Go and buy the new new dual band from kenwood and letts see the dual in band
VHF/VHF,UHF/UHF,or VHF/UHF.
Forget it that rig wont do it,From other reports i have herd that it wont
cross band repeat.
What a joke,and the V-7a is 30 or 40 bucks more,would'nt that be worth that
price?
I love mine So Tim I hope u can clear some of this clutter on this news group
,and upgrade ur 733 to a V-7a.
I am shure u feel the same way about ur rig the way i do.
The rest may want to get there eye site checked !
73 de Denny WY3F....Waiting for Dayton,See u there ?

Way to go Tom. Well said and TRUE remarks about HF. I too have
endured learning the code to 13wpm to become a general. WOW is all
that I can say about HF. Now, I am studying to go all the way to
Extra. I can't think of any reason not to!

This reminds me of something else I endured once upon a time:
I wanted to play football as a freshman in high school.
One of the coach's criteria to QUALIFY to try out for the team was to
run one mile in less than 6 minutes for running backs, and less than 7
minutes for linemen.

I wasn't a very good distance runner, but I _wanted_ to try out for
the team. So, the only thing that I could do was TRAIN for the mile
run and succeed BEFORE the actual try outs.

Anyway, I set my mind to the task and succeeded, both in the mile run
and making the team. Only then could I enjoy the thrill of playing on
the team.

Sounds just like the code requirement, doesn't it?

Too many radios. Need to sell one or the other.

For Sale: Kenwood TS-940S/AT with IRC CW and SSB filters.
Excellent condition and includes the SP-940,
hand mike and manual plus origianl boxes for
shipping. $1250 plus shipping but prefer local
pickup.

For Sale: Kenwood TS-440S/AT with Kenwood CW and SSB
filters. Worn spot on top of case but otherwise
in excellent condition. The PLL board has been
cleaned and rewaxed. Includes hand mike, operating
manual, service manual and original boxes for
shipping. $675 plus shipping but prefer local
pickup.

I can't comment on the Tomahawk (which looks like a conversion of the
Cherokee CB base station), but I have dealt with Copper in the past
(about 3 years ago).

I purchased a number of Uniden HR-2510 10 meter radios from Copper
(before the FCC put the kabash on importing this model) and got
working brand-new units in a timely manner every time.

I don't agree with Copper's philosophy of selling a bunch of 10 meter
conversions of CB radios as "freeband toys" and never any mention of
Amateur Radio and the requirement of a license to legally use them,
but they have never stiffed me.

For what it is worth....

Greetings,

I have a Yaesu FTC-1123 VHF handie-talkie with no manual. I know about the program switch on the bottom of the radio, but can't make any sense on how to program the radio from there.

If anyone can give me directions on how to program this radio, I would greatly appreciate it.

Or if you have a copy of a manual you could send me, I would be glad to pay for copies and postage!

3578. Question on Power Loss on 144/440 Duplexer

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-04 00:00:00 UTC
From: Toshi Watanabe <watanabe@Heraldnet.com>
Message-ID: <354E6167.90FEA669@Heraldnet.com>
Source record: 145010

I have concern on my mobile setup.

Here is my set up: Yaesu FT-8500 to common input of MFJ MFJ-916 144/440 Duplexer. 144 output goes to antenex wide band (144-156) antenna CW1443,

440 output goes to antenex wide band (440-470) antenna CW4405C.
I used Yaesu SWR & Power meter YS-500 to measure power reading at input side and output side of the duplexer.

This is what I got.

Frequency PW @ comm PW @ 144/440

144 42 37
146 50 42
148 47 46
150 49 40
152 60 46
154 51 40
156 40 30
158 50 35

440 28 16
442 40 25
444 40 17
446 28 16
448 30 18
450 37 16
460 35 22
462 30 18
467 24 12
470 40 25

First of all, am I measuring right by putting meter in front of duplexer and
back of duplexer? (i.e. the different length of feed line to the meter by
moving the meter, etc ...)

It seem that on average on 144 I'm losing 20% and 30-40% on 440.
This seems excessive.

Is it good idea to go with like Diamond Duplexer which claim 0.2 db insertion loss which I believe 5%.

Any help is appreciated.

I agree. I am studying and the progress is slow, but it is steady and I should be on HF by early June. The earliest that code COULD be dropped as a licensing requirement is late 2001. That's assuming all parties to the ITU/WARC agree at WARC 99. Then there is a phasing in period during which the new regs are implemented. Again, that is a 'best' case scenario. It is not likely that such an agreement will be reached at WARC 99. If any changes are made, it would be to lower the code requirement to 10 WPM.

Okay, here's my dilemna.
I play guitar. I have a guitar amplifier. I live along a well-traveled highway.

When the amplifier is on, I pick up amplified cb signals from truckers who have illegally amplified cb rigs. I have to hurry and shut the amplifier off, because even with the volume turned all the way down, the signal is amplified loud enough to leave my ears ringing.

Also, I am worried about damage to my amp, I have a 1965 Fender Super Reverb, which runs on vacuum tubes. This amp is a highly sought after piece.

I am pissed off beyond belief at these hillbilly jackasses with their cb radios. Is there any way to stop this? or to jam their signals? I don't care if it's illegal, after all, no one can trace a 10 second burst of interference. What they're doing is illegal too.

3600. Icom IC-481

Newsgroup: rec.radio.amateur.equipment

From: clschmalz@aol.com
Message-ID: <1998050402535900.WAA06256@ladder03.news.aol.com>
Source record: 145034

Am considering taking advantage of AES closeout on IC-481. Would like 440 FM in car but still want to receive 154-156 MHz public service. Does the secondary receive only side of the 481 tune the full 136-174 MHz like most Icom 2 meter radios or only 144-148MHz?

If 481 can't tune PS band I'll have to settle for the IC-2000 I guess.

Thanks, Charlie N7SFT

The volume control won't help, because the interference is being picked up
after the volume control.

It's possible for a legal CB to cause interference too, but your assumtion
that amplifiers are involved could be vaild as well.

: Also, I am worried about damage to my amp, I have a 1965 Fender Super
: Reverb, which runs on vacuum tubes. This amp is a highly sought after
: piece.

It's VERY difficult to damage a tube amp, except maybe the speakers

: I am pissed off beyond belief at these hillbilly jackasses with their
: cb radios. Is there any way to stop this?

You won't have much luck stopping them.

: or to jam their signals?

Jamming them would have no effect.

: I don't care if it's illegal, after all, no one can trace a 10 second
: burst of interference. What they're doing is illegal too.

Your best bet is to throw caps and/or inductors(ferrite beads will do) on
the tube grids.
But first, try unplugging the guitar cable-if the problem goes away, then
if the plugs open, put a ferrite bead on the center lead on both ends, if
that helps, but not enough, then use a low value ceramic cap across the
center and shield leads in the plugs-the value is not critical, but if you
use too high a value, your guitar will sound muffled(loss of high freqs).
Start with a .01 Mf or .05 Mf to start.
If your cable has molded plugs, then put the parts on the jack.

Was thinking of getting a 10 meter SSB radio, found a web site (Copper Electronics) that has a "base station" rig for about $180. An "Eagle Tohomhawk(sp)". Ranges from 28.315 to 28.655MHz, suspect it could be modded for "freeband" operation, but I have no interest in operating out of band (I have a tech-plus license).
Is this a good radio?
TIA

I have to agree with you also.. after buying one with the new improved display I would have to say it does faily well in the sunlight. My friend bought one last year and its display is a little harder to see... also on his, when playing the radio and it "hears" a certain tone it will switch modes! Mine hasn't done that yet, so I'm supposing that it is fixed in the newer versions... I recently seen a page the other day describing how to disable that on older models... wonder if anyone has had the problem on newer models?

Thanx.
Seth, 73

I haven't used my vx1 long enough to experience this, but I suspect that it would only be a matter of time. I have experienced this problem on my other Yaesu products....FT530 and the display/speaker mike. For the mike, I put a label strip under the buttons of what the functions were.

Don't know what I'm going to do about the FT530....maybe I need to dig it out and use it lots so I won't forget what the buttons are for 8-)

A ham once suggested a clear membrane to cover the keys to help prevent the lettering from rubbing off, but I haven't found anything suitable for the task.

Well Im here to make your day. I will trade you a Kenwood 733 Dual
bander (predecessor to the TMV7A) for the TMV-7 and give you $100 cash for
all your suffering and pain.

I own both radios and find the TM-V7 to be the best rig on the market.

So let me please, pretty please... end your suffering.

Contact me at tnic@idt.net and quit your crying.
I am here to take away your blues.

Hi there :) I am an electronic musician looking for old SYNTHESIZERS, KEYBOARDS, drum machines, analog sequencers, vocoders, strange old effects and related electronic musical equipment.

In general, I'm looking for working or non-working instruments made in the late 60's, 70's and early to mid 80's. Machines with KNOBS, SLIDERS and especially patchcords:
The more unusual, the better.

_Moog
_ARP
_Roland
_Buchla
_Serge
_Korg
_EML (electrocomp)
_Polyfusion
_EMS (synthi and vcs-3 putney)
_RSF
_Oberheim
_Sequential
_Steiner Parker
_Aries
_Synton
_E-mu
_Electro-Harmonix
_Ionic
_OSCar monosynth
_Roland _TB-303 Computer-Controlled *Bassline
_Roland _TR-909 Drum Machine
_Roland _TR-808 " "
_Pearl Syncussion SY-1
_ARP _sequencer
_EML-400 _Electrocomp _sequencer
_Korg _SQ-10 _analog _sequencer
_Simmons SDS-5, 6, 7 Drum Brains

If you have any of the above or similar equipment which you'd like to sell, or know someone who might, please email me at rolandman1@aol.com If you'd like, please include your phone number since my email has occasionally been unreliable in the past.

Thank you very much for your time and I apologize if this posting annoys anyone.

Hi Alan,
I just want to warn potential customers to beware of bying handhelds
which cannot be repaired.Since I am in amateur world more then 10
years and I have many handhelds (mainly Yaesu),and of course I have
problem with some of them,but never such of problem that cannot be
repaired,especially when I buy handheld of near 1000 dem (with TSQ
unit inside).After that I decide to make bid step forward and I buy
Motorola base station and handheld and that is the best thing that I
ever do.

Bye Sacha

3623. Taming RF-emitting answering machine

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-04 00:00:00 UTC
From: ken.hoover@DIE.SPAM.DIE.yale.edu
Message-ID: <6ikg4d$4mo$1@news.ycc.yale.edu>
Source record: 145057

Greetings!

I am having problems with, of all things, a digital answering machine spraying a lot of RF in the 2-meter band. My HT is nearly unusable within 30 feet of the thing unless I use tone squelch. I've confirmed the source because unplugging the machine makes the interference disappear completely.

Since replacing the thing isn't an option for now, does anyone have any suggestions about how to reduce/eliminate this? Would a ferrite bead work?

Please email any suggestions (remove "spam." from the reply-to address).

Thanks in advance for any help you can give!

- 73 Ken Hoover

Pre-Dayton-Hamvention Sale and Spring Cleaning

We often load up trucks full of equipment and go to the Dayton Hamvention. It's fun to meet many of the people we talk to and get away from the office. There is considerable expense in doing this and we would like to try a better way.

We have compiled a list of equipment that "would have gone to Dayton" and made it available in a file that can be sent via E-Mail, FAX'd or even U.S. Mail. We propose to make available a:

Tektronix List Available on 5-4

Hewlett Packard List Available on 5-6

Other than Above Available on 5-8

The Tektronix list includes: 7000 Series Mainframes and Plug-Ins
400 Series Portables
TM500 Mainframes and Plug-Ins
Fixtures and terminations
2200 Series Portables
Cameras

If you would like the list E-Mailed, it is available in Excel and Test formats.

To get the list, either visit our web page http://www.valuetronics.com or E-Mail us at sales@valuetronics.com or valutron@aol.com. Tell us where to send it and we''ll attach the file to a return E-Mail.

This is a bidding process. The bid closing dates will be listed on the files.

The equipment is available to the highest bidder(s), no accessories are supplied nor warranties implied. We do offer an unconditional evaluation period on all the products.

I am looking for a radio that will allow me to use voice and APRS at the same time. I would like to avoid having to use two radios and antennas. From what I saw in AES catalog it appears that the Kenwood TM-V7A will do this. I would like to be able to run my GPS tracker and TNC and switch over to voice on another frequency that I would be monitoring. Any thoughts or other radios that will allow this?

> KF4UODI have one and weather it is any good depends on your wants/needs. It has gain on 10 and 15, and provides a good f/b ratio on all bands. It allows transmission on 10-20m, and allows good swbcb reception on most all sw bands. For my needs it performs very well, but it can not beat a good 3 element beam. Sometimes my vertical outperforms it, but not very often. If you contest, you will probably be disapointed. The best thing about it is that is is small and has little wind loading. Mine has been up 6 years with no trouble.

I need a little help with this amplifier that I picked up a couple of months ago. This is my first amp that I have ever owned and don't really have an understanding of what to expect.

This amp has 4 - 572B tubes and appears to be operating correctly. The previous owner told me that the tubes maybe soft so output will be low.

What I am finding is that with about 75 watts drive from my TS450s on 10m I get about 500 watts into the dummy load.

On 75m with about 90 watts drive I see about 900 watts indicated on the meter.

Although these power levels are adequate, I am wondering if this is low for this type of amlifier.

I would be curious in hearing from other owners of similar amplifiers to get an understanding of what this thing is supposed to do.

Thanks.....Peter, VA3PK

F.S.ICOM 781
Have ICOM 781 in mint condition....have 3.3kc 455 and a 2.8kc crystals
installed in unit
fantastic sound.....must hear or see to fully appreciate..The person
looking for an excellent to new 781 this is it.....Price is $3900.00
firm.....Would be nice if you are local to my area so that you can work
unit for yourself to support my comments .....

email w2onv@worldnet.att.net 201-368-3655 Fax 201 368-2460

Just seen in a few places that the T8A can transmit on 220, I just wonder if this is after the caps/mars mod's or something and if you can put in offsets, tone, etc...

Thanx to anyone that can clear this up!!!

KF4TUZ... Mike, 73's.

3641. Computer Monitor Interference

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-05 00:00:00 UTC
From: Bill Brannick <WmLB@prefer.net>
Message-ID: <354F9E9D.44FE9D3A@prefer.net>
Source record: 144775

I own a 1994 vintage Gateway Crystalscan, 1572 FS monitor that generates all kinds of noise on 20 meters at 36 kc intervals all the way across the band. The noise is most prevelant when operateing in Windows. The problem almost disappears when I go to a DOS screen. I have tried different video drivers.... but no improvement has been noted. Reducing the number of colors helps a little bit. Moving the monitor and/or video cable around seems to have little effect.

Is there anything else I might try or is this a "live-with" situation?

Chill man. He was just giving his experience with finally giving up the procrastination and buckling down to get it. Since you already are using CW more power to you. The more you use it the faster you get. I personally love using it on 15 meters. Makes for some very interesting contacts. But as far as licensing I could care less if they drop the requirement. I just know I enjoy it.

Marty Duplissey

For Sale: SS-9000, very clean, all original, fully functional. Have seen a few SS-9000s, but this is by far the best. A few very minor scratches on the case. Two 1/8" holes in the top of the case between the grill slots, the only mod. Power supply equally clean, fully functional. no mods. Acquired from original owner. Original manuals for both units. Will be taking to Dayton, if not sold.

$900 shipped

If the interference is happening at 36khz intervals I'd guess it's harmonics of the horizontal sweep circuit in the monitor, not the video signal. The most likely radiating source of this noise would be the H.O.T. Horizontal Output Transformer or known to those old TV guys as the flyback transformer. You would probably have to employ some kind of shielding at the source. Sorry, but I don't have any specific recommendations on how to do this. In fact this transformer is usually used to develop high voltage for the CRT so approach with extreme caution.

You may be best off to try shielding the whole inside cabinet of the monitor. Perhaps with some conductive paint coating made for this purpose. Then using a ground strap on your newly shielded cabinet to the third wire ground connection of the power cord.

Good Luck! - Bob

Dave,

The TX audio appears to be on the low side.

It is a nice little radio. Easy to use and a nice RX audio. It has five bands:

1. 70 cm
2. 2m
3. Aircraft band (AM)
4. 6m
5. BC FM (Wide FM)

The "call" frequency is individual to the band, but the memories cover any band. You can also scan frequency ranges within individual bands.

A few downsides:

a. The battery only has 680 mAh capacity
b. It takes 15 hours to charge fully after a complete discharge (which they recommend doing)
c. Intermod is bad
d. The antenna is a little too long. This is a cosmetic and handling complaint. It *does* seem to work well on 2m and 70 cm.
e. The squelch is fixed; it cannot be adjusted.

I have yet to try the radio on 6 meters. We do not have much FM activity there.

73 de VE7MDL ....Erik.

Geeze, his HT is probably still under warranty...<g>

Go to DXER.COM or any other major site dedicated to Amateur Radio. It's all over the place.

Due to the inherently miniature components used, please make sure that you NOT consume ANY caffeine for at least 48 hours before attempting the modification. And leave your 45-Watt soldering iron in the garage.

When the audio amplifier tends to pick up RF and the level of
interference is independent from setting of the volume control, I find
that the most effective way is to use ferrite rods and wind the AC
cord and speaker cords. This cures 90 per cent of all problems!!
Bypassing with capacitors can affect the audio sound and in some cases
turn the amp into an oscillator.

Maybe this is what we need to lobby for, moving 11 metres (26 to 28 Mhz) back into ham radio. If the world radio conferrence would do so.

Hobby radio needs to be licensed. Even "community" (low power) broadcast stations should have some type of regulation. Too many rebels out there. We all need some fenses (limits) in our lives. None of us are all that wise. (And this goes for the those in government as well.) Let ham radio do the hobby stuff. Let FRS do the public version of business radio. But we do need structure.

Tom, you make good points. Except, I have had a life long
struggle with the code. I am a Tech+, but that is as far
as I have gotten. Look, I have been fighting this since
1959, I know myself. If there was a way to learn, I would
have done it!!

Of all the methods, I like the MFJ pocket code tutors the
best. Lets me do what I can do with a computer but the
convence of tapes. Even that is not good enough, I am having
problems mastering the alphabet!

Look I remember the fuss over the Bash books (what Gordon West)
was based on. At that time the FCC did not release any question
pools. Bash sent people in and after they took the test, he would
have them list what questions were asked. His were the first study
books.

That was also the beginning of the CB craze. So hams went nuts fearing
an influx of LIDs. We still have hams in the Purdue area that do not
want anyone in the hobby that they did not personally invite. The
code fight is just an extention of the fight over the Bash books.

A ham that has moved into another zone can keep their old call and vanity calls can be requested with any zone number. It is getting harder to tell which area of the country a ham is from just by the call letters anymore.

In my experience installing all bands of RF equipment, newer Chevy trucks have been notorious for interference like this. The only way we were able to reduce, although in most cases not completely eliminate, the problem was to connect power directly to the battery and utilize a good quality noise filter. Other than that, we have been unable to find a more useful solution, other than trading your Chevy in on a new Ford. Good Luck!

We have the following:

Part Number SMA-208-CO-B
WR42 cover flange to SMA
Brass
$199.00 for quantity 1ea, two weeks or less delivery

We offer rapid delivery of standard waveguide types, both
rigid and flex-twist. Stock to 1 week maximum up to 20 foot sections.
1, 2, and 4 foot sections almost always in stock., WR430 to WR28.
Bends, twists, gaskets, etc also in stock.

Try putting some ferrit filters on you power cord and speaker leads.
You should be able to get the information on how to do that from a
book on Amateur Radio in most libraries.

Good Luck,
Bob

Tom Nicastri <tnic@IDT.NET> wrote in article
<6il06m$p3e@nnrp2.farm.idt.net>...
Tom--

My experience is similar to yours. After 28 years as a Technician
(actually Tech Plus) I decided to upgrade.

I used Code Quick and Morse Academy, and passed 13 WPM in about a month.

I kept practicing with Morse Academy, and passed at 20 WPM with a score of
10 out of 10 on the multiple choice test. This took 2 months more,
investing just 20 minutes a day.

I'm now an Extra class licensee, and having a blast with HF. My first 3
QSOs on 20 Meters were Northern Ireland, Greece, and Argentina, with 100 W
and a wire antenna.

My advice to others is simple: Just do it. Don't let wishful thinking for
a change in the law to stand in your way.

>high as 50 mhz.

>Hence I'd like to see the worst of this junk banned, as the output of some
>of this grey market stuff is very dirty.

It isn't just adjacent band interference either. I have chased
numerous operators off of actual ten meter frequencies by simply
operating legally.

Many think that because their radio will go there (10 meter Amateur
Band) and no one is heard, then it is OK for them to use it. Using
the band in a legal fashion tends to set up some boundaries that most
will not cross once they are aware of the location of the "line in the
sand".

Then again, I have run into a few that want ME to move away from them,
even though they are operating illegally inside the amateur band!

I guess it tends to prove that you won't find many "rocket-scientists"
on these bands or buying these cheap radios.... many don't even have a
clue of where they are to begin with (and could care less)!

HI Gang,

My Alinco DJ180 is not quite up to ARES type use. What I really would like is a radio with the following features.

GREAT AUDIO
Dual band
5 Watts

I borrowed an Icom IC2AT a while back and it was FB audio-wise, but it was a bit short on features. I do not need all of the super fancy stuff but do need both 2M and 440.

Any recommendations are heartily appreciated.

Mark N2VPK

I am not against the code. At least not all of it. But the code will kill the
hobby. Not quickly, but a slow death.

No-Code International is a organization dedicated to the
abolition of the Morse code testing requirement as a prerequisite
for
any class of Amateur Radio license. NCI will continue as a lobbying

organization as long as the manual telegraphy testing requirement
exists.

Source record: 144858

Hi,

Mine worked fine, especially for 3 bands in a compact space. If
you have the room for a dipole, the dipole will beat it though.
The elements, even though there are two, should be 32 feet
long, rather than 12.5". Ditto on the impossibility of tuning, I
got mine to a less than 2.0 to 1 on all bands, but the gain on 20
meters was a couple decibels off the reflector 8-)

It works alot more like a vertical than anything else...

Source record: 144859
Cross-posted to: rec.radio.amateur.equipment,rec.radio.shortwave

Hi all,

I have recently obtained a Yaesu FRG-8800, (with VHF converter) which does not go below 2MHz. (Some did, some didn't, depending on where they were sold...).

Can anyone advise me how to enable the LF/MF bands on this receiver?

I know it is probably simple (my Kenwood R2000 required simply cutting a diode).

I have tried the local (Australian) ham group, and have contacted Yaesu, with no response... :|

If you can help, please respond via email.

Thanks and regards
Michael

For Sale

Icom IC-2AT - rugged, dependable, basic handie-talkie. No memories, no scanning, no PL. Thumbwheel frequency selection. 2 W high power, 300 mW low power. Includes IC-25U wall-plug charger, brand new 350 mAh battery pack, and belt clip. Flaws: numerals on TouchTone pad are nearly worn off from years of use; one of the plastic rings for carrying strap broken off. Still works great! $85, includes shipping to U.S. addresses via Priority Mail. Pay by VISA, Mastercard, check, or money order.

Icom BC-35 AC Battery Charger - drop-in charger for handie-talkie battery packs. Charges these Icom battery packs: BP2, BP3, BP4 (with AA NiCads installed), BP5, BP7, BP8. Includes instruction manual. $55, includes shipping to U.S. addresses via Priority Mail.

Pay by VISA, Mastercard, check, or money order.

Buy both the IC-2AT and BC-35 for $130.

Contact Jeff DeTray NK1F, jeff@detray.com, or phone (603) 242-7995.

Hello:

Looking for an adapter between WR42 or UG-565/U which
is the Leetle Tiny stuff used at 18 GHz, and just about ANY
kind of screw-on connector (SMA, etc).

This waveguide has an internal opening of *about*
a little less than a quarter of an inch by a little less
than a half an inch, is rectangular, and uses a four-
screw (4-40!!) square flange. It almost looks "toy-like"
after fooling around with 2.5 GHz stuff.

Would also be interested in any kind of adapter/
transition from this WR42 stuff to anything a little
larger that I might already have a coax adapter for.

Any good used/surplus microwave "stuff" vendors
out there that you would recommend who might have
this kind of thing?

Thanks for your help!

While doing a little websurfing, I came upon some rather surprising
10 meter radios sold by Copper Electronics, of Louisville, Kentucky.
While these cover portions of 10 meters, they are actually intended
for the CB market. Even though the 11 meter "grey market" has been
glutted with easily-expanded 10 meter VFOed rigs like the Uniden
HR-2510 and the RCI-2950, there evidently is still a strong market for
channelized "export" CBs, which have more power and/or more freqs than
the legal CB radios used in North America. Evidently Copper and other
several other US radio dealers are filling this need by selling CB
"export" radios under the guise of easily-converted 10 meter radios.

Following are a couple of examples copied from the many offered at:
http://www.copper.com/online/ham_radios.html

Galaxy 2517 Base
#G10-00017
* FEATURES:
* 10 Meter Ham Radio
* Frequency Range: 28.765 to 29.205MHz
* AM/FM/USB/LSB/CW
* 10 Watts AM/FM/CW
* 25 Watts USB/LSB
* NB/ANL, Echo, RF/SWR Meter
* Signal/Modulation Meter, 10KHz Switch
* 5 Digit Frequency Counter and Channel Display
C.O.D. Price: $ 399.99

Eagle Sidewinder 400
#E00-06002
* AM/FM/SSB
* 10 meter mobile
* 28.315 - 28.655 MHz.
* Illuminated Digital Display
* Backlit controls
* Freq. Read Out
* Last Channel Recall
* Noise Blanker
* Dual Watch
* Mic Gain
* RF Gain
* Clarifier
* 4 Watts AM/FM, 12 Watts SSB
* 2-3/64" x 6-1/2" x 7-41/64"
* Must have proper FCC license to operate this radio

* This radio is covered in Tips/Tricks video tape #9
C.O.D. Price: $ 149.99

Both of the listed models here are not intended to be used by hams. Evidently neither has a VFO, and both probably have just 40 fixed channels, with a non-"sliding" RIT. The Galaxy 2517 only covers 28.765 to 29.205, hardly a busy section of the 10 meter ham band and has a built-in echo box, a feature never used on ham radio, but widely on CB.

While many hams have converted old CB rigs to 10 meters, certainly few if any hams would spend $400 for a new channelized rig that covers a little-used section of the band, like the Galaxy 2517.

I suspect the mod to get all these rigs going on CB is very easy... While the amateur community may have partially benefited with the cheap 10/11 meter "dual banders" like the well-made Uniden HR-2510, the rigs listed on this page will certainly see very little amateur use. Certainly some will used by the pirates on the lower end of 28 mhz, and will also increase the amount of splatter on 10 meters, as they are not made to the stricter type-acceptance standards of US CB radios.

[Humor attempt] While evidently the 11 meter "grey market" makers, importers and sellers are making a lot of money, we should be grateful that other types of radio makers have stronger ethics. Ham radio would have even more problems if renegade makers of hi-power SW BC equipment decided to offer schlocky, dirty-output gear supposedly aimed at the third-world goverment broadcasters, but actually aimed at the small minority of HF-jamming hams and maniacs who broadcast on a very few notorious ham freqs.

[Humor attempt, cont.] Imagine the hypothetical "Schoenbohm/Malyasia RF Ltd." company selling its "Megalomania 50kw Xmitter":
"Type-accepted for Uganda!" "A dime a watt! 50kw for $5,000!"
"Send $29.95 for 5 minute video on how to convert the 22 meter model: move two jumpers and yer pumpin' 50,000 watts on 14.313!"
"And don't forget the $49.95 "Uncle Herb Sooper Swinger VFO Kit!"

I'd like to see the FCC and other world radio goverment agencies tighten the loopholes that lets this grey market junk be sold legally. 73 from Leigh Marrin/KM6JE.

I had a similar problem with the soft rubber keys on an Icom 24AT. Icom replaced them once when I had the radio in for warranty service (loose BNC conn) at approx 11 months. New keys lasted only a couple of years.

I also have an Icom 32AT with the hard plastic keys. Radio is about the same age as 24AT. It's had harder use but key tops are still 100%. It must be the nature of soft rubber keys and the printing methods used by manufacturers.

I was actually considering getting one of these rigs for legal 10 meter use,
but the people of this newsgroup have consistently advised against it.
Maybe I'll buy my mom's (ex father's) TS520S rig. Anyway, do a little
more web surfing and find the mods for getting on illegal freeband freqs.
Things like "unsolder the pink wire, and plug in that loose connector
behind the PLL board". Or "Move jumper J4 from pins 1 and 2 to 2 and 3".
You don't have to be a rocket scientist to get on "freeband".

What would happen if the FCC allocated the "freeband" to amateur radio?
Could we evict the illegal operators? Not easily, I'm sure.

3715. Way to go, Tom!

Way to stick with it, Tom! Welcome to HF.

I'm very biased -- I love CW and spend most of my on-air time using it. I know it's really hard to learn CW under pressure -- especially if you don't like it. Once upon a time, we all entered ham radio as Novices, and we generally (no pun intended) plugged away on the CW bands for six months to a year before we upgraded. But the key was we USED cw. (Again, an unintentional pun.)

Guys who wrestle with the code OFF the air until they reach 13 wpm should be commended for their tenacity. I take my hat off to 'em. I have always believed that the BEST way to learn the code was to USE it. When you pass the 5 wpm test, get on the air! Sure, you will stumble and fumble at first, but we all did. Try it -- give it a chance. You might like it. At the very least, you'll learn it quicker. When you pass the 13 WPM, if you don't like CW, you can chuck your key. These days, you have that right. (Used to be, you had to certify at renewal time that you could still copy code!)

I'm willing to help anyone get their code up. If you want some tips, some encouragement, or if you want to set up a sked, e-mail me. I'm at STEVE.W3SY@EROLS.COM.

(Oh, in case anyone thinks I'm some old goat from the spark gap days, I'm only 40, though I've been licensed for 28 years. hi hi)

Congrats, Tom and 73 to all --
Steve W3SY

: Why worry about it? If people buy this crap then they have got their own
: reward, haven't they?
:
: It is the law that is the problem..... If these rigs were made to cover 26
: to 28 mhz, with eprom programming to disallow easy mods to 10 meters, then
: the ham bands would not be impacted by these "operators" at all.

To a certain extent, I'd agree that responsible freebanding is largely a victimless crime, BUT a minority of CBers DO IMPACT the 10 meter amateur band. Many times when I've been on 10 meters I've been badly QRMed by someone below 28.00 splattering wildly, or with a strong spur. A CBer whom I believe lives about 1/2 a mile from me has caused interference as high as 50 mhz.

Hence I'd like to see the worst of this junk banned, as the output of some of this grey market stuff is very dirty.

3723. SHACK SOFTWARE RECOMMENDED?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-05 00:00:00 UTC

Message-ID: <6im66m$hgu@bgtnsc01.worldnet.att.net>
Source record: 144951

I am looking for a do-it-all software package, compatible with
Windows95 or Windows-NT, which offers as much of the following
features as possible (in approximate priority order):

User friendly interface
Station Logging
QSL database (mailer, WAS/DXCC/etc. awards manager)
Dual system clock (local + GMT)
Administrative tools (antenna headings; prefix lookup; interface with
Callbook; interface with text files e.g. band plans, rules/regs, etc.)
Interface for rotor control, such as Yaesu SDX series
Shareware desireable but not mandatory

Does such a beast exist? I have tried some shareware products that are
impressive, but almost require a second operator! What software tools
are out there that make operating chores EASIER?

Thanks and 73,

Dan
K0DAN

Answer to your problem...get a good audio frequency filter and put it at
the input to your
amp. That will keep those nasty CBers out of it. Else you might move away
from a major
highway.

You did not say what kind of music you play. If it is not Country Western
let me know where
you live. I am fixing to make a tour of the U. S. I will be running HF
Mbile with a 600 watt
amp and I will be sure to program that highway into my tour.

That is unfortuate that you aren't able to budget your time better. I know of at least 3 hams who have done all that you mention plus act as regular net control on HF and VHF nets, are officers in local repeater clubs, regularly handle local CW traffic on 80 and 40 meters and are raising a family with 3 to 5 children and teaching them about radio theory and learning the CW. Two of these hams are extra class and one is advanced and studying for extra class. Perhaps you should review your activities to see where you are wasting so much time.

A protective softcase with clear plastic covering the keys (ie TH-79, IC-P4AT)
also works wonders, and it protects the rest of the HT very nicely!

Hello:

Looking for an adapter between WR42 or RG 565/U which
is the Leetle Tiny stuff used at 18 GHz and just about ANY
kind of screw-on connector (SMA, etc).

This waveguide has an internal opening of *about*
a little less than a quarter of an inch by a little less
than a half an inch, is rectangular, and uses a four-
screw (4-40!!) square flange. It almost looks "toy-like"
after fooling around with 2.5 GHz stuff.

Would also be interested in any kind of adapter/
transition from this WR42 stuff to anything a little
larger that I might already have a coax adapter for.

Any good used/surplus microwave "stuff" vendors
out there that you would recommend who might have
this kind of stuff?

Thanks for your help!

looking to buy a 211 in good condition (prefered), with or without accy manuals, price wanted should reflect condition and accy's, serious sellers please, would prefer a unit with a serial number above 2600 but can go as low as 2100, the PLL is better. 211 can be not operating or have broken switches but the price should reflect this. NOT looking for a freebee, will pay a fair price. Please Email

Thank you for stopping by.

I got one of these two days ago according to ICOM first one bought in
Australia!!! Its great and I like it even more than a VX-1 because its not
yaesu!!!!! what can I say its a 30-1309MHz scanner AM,FM,WFM and it transmits
aswell! Has better sound than my IC-T8 and it was $AUS350 which is about 2/3
of a VX-1!

Its a great radio e-mail me if you want more info.
cheers
ERIC.

I just obtained one of these little gems it's just like a VX-1 only better because its not a Yaesu!!!!!!

According to ICOM I bought the first one in Australia!!! Its just such a little toy! RX 30-1309 AM,FM and WFM tx like normal for the time being.

Ive taken it apart and began to think about changing diodes but am away from home at the moment has any body done any mods yet or found anything out about this little radio.

Before any body hassles me for voiding warrenty and stuff. I'm an RF Design engineer and when I buy my equipment I ask for a discount because I don't want the warrenty! Most techs dont have acces to the equipment I have any way so i'd rather fix it if it brakes.

Any responce, interest or questions would be appreciated, I'm open for discussion. reply via e-mail please.

Cheers
ERIC.

Not gonna happen, If anything hams are going to lose spectrum not gain it.
If big companies figure out there is money in it kiss them goodbye. Besides
the fact that there is a big decline in new hams. Of course with the ARRL
giving away anything that Uncle Sam wants them too it won't be long.

There will be a one day estate sale on Saturday, May 9, in Barrington, Illinois, about 30 miles NW of Chicago. W9TT, Bill Christman, passed away on Valentines Day. A couple of hams have priced and sorted many of the items. I offered to post the sale on the net, but cannot answer any detailed questions.

Take Rt. 14 NW to Barrington. About 2 blocks past Rt. 59 turn left onto Prospect Avenue, just across from the Ace Hardware store.
The house is the second one on the left.
146.535 talkin.
The sale will run from 10:00 AM until 3:00 PM. Ham radio and related equipment only. On site sales only.

Drake T-4xc, TR-4, R-4c, L-4b, FS-4, power supplies, and more.
Heathkit test equipment
Older 2m FM gear- mobiles and bases
Old scopes
Keyer, mikes
Antennas
MANY old chassis, homebrew projects, components
Many boxes of ????

Priced to go!

3751. Which FT-1000 mfg s/n # should I buy?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-06 00:00:00 UTC
From: NE7X <NE7X@amsat.org>
Message-ID: <3550F51C.7D8E@amsat.org>
Source record: 144729

I'm interested in purchasing a used Yaesu FT-1000 series HF transceiver next week while at the Dayton HamVention.

However before doing so, It's my understanding there were two major manufacturing production runs of these radios. I'm not referring to manufacturing production changes of simple components or wiring changes, I referring to two completely different main RF board fabrication differences. The first RF main board design had a major receive noise design flaw, and it took a complete redesign of this RF board to quite the receiver generated noise problem.

Its also my understanding that the two RF main boards are so different, the first production run boards can not be modified or upgraded to the second production run level. There is that much of a drastic difference between the two design fabrications.

Does anyone know what the serial number break point is for these two major RF main board production run changes? When looking at Dayton in the swap meet next week, I want to make sure I don't buy someone else's expensive noisy radio.

Thanks, NE7X...

> > > Icoms new HT. Anyone have more info than the HRO catalog? Scan banks,
> > scan
> > > edges, external power??? I have some specs and a small picture. I can
> > > e-mail if interested.

It has a variety of scan functions. These include all scan, band scan, edge scan, 0-99 memory scan, 100-199 memory scan, all memory scan. Memory channels can be programmed to be skipped in all memory modes and VFO scan modes if noisy, noisy channels can be auto programmed in vfo scan modes. there are 10 edge scan banks which use any of the 200 channels or call channels, the edge bank simply has the channel number s in it which you wish to be the upper and lower frequency limits! There are also three priority scan modes. While in VFO check sellected memory channel every 5 sec, or increment to next memory channel each time(skips channels can be programmed) or check call channel every 5 sec. Radio has no external power input, I have been using alkaline batteries for the past 2days almost non stop still getting over 450mW on TX!! Have got 4 AA size 1.1AHr NiHi batteries so I can swap but have had no need to. Having disasemled the radio I have found that there is enough room for a DC connector near the top opposite the PTT and will be putting one in when I obtain a spare back! My second option is to obtain a new battery cover and use this to make a NiHi battery pack with built in charger cct and a plug! this would probably be more favorable however with the right bits I can make both look original. If people are interested I can make and sell these. My only complaint so far is the really stupid belt clip the one on the IC-T8 is much better and I have already modified one to suit.(cut the width of the tang down! it still makes the radio quite fat though so I might make a S/S one. The original one is very curved and hard to place onto the belt with one hand it is the same as on the IC-M1 and I have know of two radios being lost on SAS operations because of the poor belt clip design. Thats about my only gripe I think. I would have to guess that if VX-1's only cost US$250 now in the states with a little shopping around then $175 would probably be a suitable figure for a new one of these over there! I payed AUS$350 which is US$220 curently but our ham gear is considerably more expensive hear. I would have to say that it is definately one of the smallest scanners available.

cheers
ERIC.
P.S. I'd be interested in any more info on it please email me on eric_fre@hotmail.com

>
> KF4TUZ... Mike, 73's.

I have a couple of comments.

1. If it could be easily done don't you think Icom would have done it
and be crowing loudly about the first quad-band talkie???

2. Due to limited space the tx filters are severely limited.

Now for a bonus question? What is 2 times 222 to 224 mhz???

Can you spell second harmonic that is not band pass filtered(440 radio
remember) and imagine how popular you are going to be to the operators
on the 440 band. Lots more of them than 220.

I haven't looked at one on a spectrum analyzer(don't have a T8 handy)
but I think those who would want to operate it on 220 think about it.

Message-ID: <355143D2.19C2@qsl.net>
Source record: 144736

A friend of mine who doesn't have a computer is having a problem with his Kenwood TS-711A when it is left on for an extended period of time (24 hours, etc.) like for a contest, the receive goes away.

Has anyone had this problem with a TS-711A and found out what is causing it. He has had the rig to Kenwood for repair and they have done nothing because they say they are not allowed to leave a rig on overnight so they can only leave it on for eight hours at a time and the problem doesn't show up unless the radio is left on for an extended time.

No, to the latter. FWIW, I'm very pleased with mine -- and also have CW and optional 1.9KHz SSB filters in my radio.

Following is a message from an early installer:

My post to the newsgroup that I had received the Icom UT-106 DSP Module for
the Icom 706MII generated roughly 47 messages to my mail box in the last to
days with lots of questions. I had not planned on installing the DSP unit
until this weekend but I did so thursday evening. I will give a brief
overview of the installation of the module, and what observations I came
away with after 2, 30 minute sessions of listening to signals on 40 meters.
I am not a technical writer, so keep that in mind. I got numerous requests
for first impressions and second most asked question was how hard was it to
install. I don't have any experience with DSP, my home rig is a Kenwood
TS-850 so the only things I know about DSP is what I have read and heard
from other hams. I have few pre-concived ideas about DSP. So here we go....

Installation

The unit comes with installation and operating instructions in the box and a
photocopy of supplemental installation instructions, it shows better
pictures of the install. Installing the unit consists of removing both the
top and bottom. Unplug the P1 cable from the top side of the radio, feed it
along the side and pull it out on the bottom side of the radio. A small
white ribbon is feed thur the same opening from the top to bottom. To get

the P1 cable through, it was easier to unplug the ribbon cable from the top
side and feed it through to the bottom. The P1 cable you just feed through
plugs into the J1 DSP unit, the cable that was already connected to the DSP
when it was unpacked is feed through to the side to the top and connected
to the J12.
Rehook the ribbon cable that was unhooked to get the cables along the side
and install the new short ribbon cable on the bottom side and put the covers
back on and your done. When you turn the radio on the functions are
available under the S4 display. The instructions are very clear.

Functions

The unit has two basic functions. ANF(Automatic Notch Filter) can be turned
on or off and is not adjustable It works in SSB, AM and FM. The NR(Noise
Reduction) function can be turned on or off and works in all modes. It also
has a level control NRL, this controls the noise reduction level from 0 -15.
When selected this level is controlled by turning the M-CH control. The DSP
is an audio stage dsp and not IF dsp.

Observations

Both nights I spent monitoring on 40meter LSB, noise levels were running S5
here and no optional filters were used.

ANF - The ANF was designed to attenuate beat tones, tuning signals and most
single pitched tones. Thats why it does not work in CW and RTTY modes.
Listening to QSO's and hearing someone close to the frequency tuning up in
almost everycase was eliminated totaly by switching on the ANF. I would say
90% of the single frequency tone type of interference were completely
removed and the rest suppressed greatly. Signals that studdered or
woodpeckered came through with little or no filtering.

NR - The NR was designed to reduce the amount of noise and pickout desired
signals buried in the noise. The NR function reduced the noise levels, on
strong signals(20 over 9 and up) the level could be turn up above level 10

and the noise was reduced to very low levels. The audio signals were also
reduce but not to has high a degree, meaning I then needed to turn up the
volume slightly. Not as good as FM but close. Moderately strong
signals(S6 - S9) benefit the most from the unit. As I increased the NR level
both noise and audio is attenuated, the noise at a greater rate. I now had
to increase the volume a fair amount more to be able to understand the
conversation, but copy was still good and 50-60% of the noise was reduced.
Weak signals with or with DSP were still had to copy. I generally found that
if I couldn't copy the conversation thur the noise without NR, then with NR
was not going to either.

One oddity that I found while using the NR level was that increasing the
noise reduction level sometimes the conversation would be readable lets say
at level 5, turn it to six and the copy would not be as good, increase the
level to 7 worse, then increase to 8 and it might get better. Did not
happen all the time, not sure if the audio to noise ratio actually got
better or was just a change in tone pitch? Need more time with it.

The operating instructions do say that if you turn the level up too high you
can cause signal masking and distrotion, and it does do that. Some weak
signals I listened to I was able to make them disappear even at level 10.

Bottom line on my first impressions, is it a cure for coping weak signals
from the QRN? No.....I'd say the NR function made copyable signals much more
pleasant to listen to by removing much noise but I honestly can't say it
helped pick weak signals out of the mud. I am sure it will increase the
pleasure of my mobile operating experience by being able to cleanup many of
the signals. After I have used it for an extended period of time or use
another radio with DSP, I am sure my opion will change to some degree. I
hope this was informative for those looking for a few answers.....

I have an ALPHA 87A for sale from a silent key. He was a fanatic about keeping his equipment mint!
Very little use as he's been sick for a while.

A new one from the factory is $6390 + shipping.

Grab this one for $4950 (Firm) pick up in West LA or you pay packing/shipping.

(310) 478-4987 or e-mail below

> frequency.

I have a TM-331A, and they use the same manual. I did not have to
install any added module to xmt PL tones.

I will give you a brief summary of how to set tones.

1. Press F key for more longer than one second. F indicator will
flash. Press TONE/T.ALT key withing 10 seconds. Current tone freq will
be displayed.

2. Rotate tuning dial to select desired tone freq.

3. Press any pront panel key to return to normal (RF) freq display.

If this doesn't work, let me know and I will try harder.

Phil

There's also one other piece of information you might want...I do...
I believe that somewhere during the A105 run, they also removed the tiny
diode that lets you easily open up the cell and xmit ranges. Might be
good to know the serial number where this happened.
SN 7I022277 has the diode.

Please contact him for any detailed information.

Sale Price $165.00

Optoelectronics
The DC440 is a powerful yet flexible instrument for decoding
sub-audible and digital signaling tones as well as Touch-tone&#65533;
characters. The DC440 monitors the demodulated audio output from a
communications receiver, service monitor, scanner, or Interceptortm.
The DC440 automatically decodes CTCSS tones and DCS codes. A unique
feature of this instrument is that DTMF characters are also
simultaneously displayed on the two line alpha numeric LCD.

Go to this web page for details on the decoder.

From: Ken Bickel <ac4vvNoSpam@qsl.net>
Message-ID: <6iobbj$g3h$1@news.megsinet.net>
Source record: 144797

I have the MFJ-1026 and would not want to be without it. It does take some experimenting to get the right 'noise' antenna and figure out how to adjust it, but it is more than worth the effort.

I have high voltage power lines that run behind my home and it takes care of that noise. It also takes care of the noise generated by a computer that sits less than four feet from the HF rig.

Before the 1026 I had an S4 to S7 noise level. With the 1026 I can reduce that to S0 to S1 without any problem.

I understood, but I get gruff from all kinds of people heavy into hf.
I like listening to certain entertaining CB portions of the advanced
and extra class portions of 75/40/20 meters. I think that it is funny
how some people critizise no code<and know code even if not on paper>
operators. I know many HF guys who never get on vhf/uhf and never
do a thing to help the community. BTW that IS the reason that the
service was created for those who do not know.

anyway....ranting and raving aside, I do cw, not very fast, but when I
need to to make the dx contact via tropo or e skip on 6 meters or 2.
ya'll have a GREAT day

Option is a Attenuator switch(I think, Else it might be a noise limiter).
As for the the CW switch, you need to do 3 things:
1.flip the bottom switch to cw.
2.press and hold the push-to-talk button down(the white one on the left
side of the radio)
3.press the CW button...the send LED will light when you press it, and the
meter will show that you are transmitting.

PARG Press release

PARG International - PHANTOM'S AMATEUR RADIO GROUP INTERNATIONAL (PARG), will sponsor
the annual Dayton Activities, Dayton Dinners, and Interference Committee activities
again this year. PARG is the only visible and service orientated group for radio
hobbyists dedicated to preserving the high integrity and traditional values of amateur
radio, showcasing the hobby as attractive/fun for all, and promoting relationships
between men and women in amateur radio. The PARG Hospitality Suite will be open to all
members & guests. PARG members and friends are asked to check in on the PARG repeater
during Hamvention on 443.575 Mhz (+ offset/100 Hz) for times/locations. President
Justin Bousquet and Co-Founder Larry F Johnson are a part of the speaker program.
Topic of discussions will include LIDS, Internet, and Amateur Radio. Please see the
PARG web site HTTP://WWW.PARG.ORG or write to pio@parg.org.

You are working emergency simulations and real-life crises. You want a bullet-proof radio. You want a Yaseu FT-50.

Couple the Yaseu FT-50 with MAHA NiMH FNB-47 1800mAh batteries and the Maha MH-C777 Universal Charger, and you have one marvelous setup. The battery will last you forever. You will be able to charge everyone else's batteries from your car (the MAHA Charger comes with a 12VDC cigarette plug adapted for the unit). You will be the envy of your fellow AREA Members.

Well, OK - that a bit of a stretch. But I just found myself in a VERY similar situation, and chose the FT-50 myself. And have enjoyed both Maha products for many months.

>> I just bought the ADMS software, would someone send me a VX-1R so
>> I can try it out?

Thanks for the laugh!

I found myself last week in a related scenario.

I purchased a commercial Vertex VX-10 last year for UHF public service work. I mistakenly thought that the ADMS-1 software would program it - so I bought it at HRO. Nope, it doesn't work on the commercial unit. (So I got the Vertex programming kit.)

But now I have this great software with nowhere to go <grin>. So I chose to purchase either the FT-51 or FT-50 from Yaseu - I already had the software! And since I already had a bunch of 7.2V FNB-47 batteries, I chose to get the FT-50.

What a convoluted manner in which to make a purchasing decision...<g>

3787. Spark Gap and spark transmitter??

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-06 00:00:00 UTC
From: doctorsalt@pivot.net
Message-ID: <6ios48$4fd$1@nnrp1.dejanews.com>
Source record: 144814

I have what I believe to be an original quench gap for a spark transmitter. I am told that it was a prototype built by GE early in the 19th century. It is a round ball with a hole in the side for the quench liquid, inside is the gap made up of two round plates about 3/4 inch dia on the ends of rods extending into the ball from two sides, adjustable for gap. The unit looks like it may be mounted like a large bus fuse, each end is a brass rod about 5/8 inch in diameter. Anyone know anything about this. Also have what appears to be a spark generator mfg by Atwater Kent around the turn of the century. A small wooden bos about 4X4X6 inches, 6 terminals on the front, they are identified as: interrupter (2), + and - (2) and one mounted on a High Voltage dielectric material, the other marked ground. On the top there is a pivot type switch for on/off and another switch like a small cw key identified as "start". Anyone-what have I found? K. Morton - doctorsalt@pivot.net

I have the ANC-4 and it works fine on the kind of noise you describe.
Thunder storms on the other hand can't be nulled out.

I had S9 noise here and with the ANC-4 it was down to S2-3 and I
could hear people in there! :-)

I have for sale a IC-706. Includes items below:

IC-706 MKI
FL-100 CW filter 500Hz
OPC-581 11.5' separation cable
MB-63 Mounting bracket for control panel
Icom service manual (this is from icom)
All boxes and manuals

This radio was only mobile once for a road trip. Was used as a base by a non-smoker. I would like $850.00 for everything. I will pay shipping lower 48 states. I can be reached by E-mail or my phone number is 216-741-4717.

International Radio in Florida sold a high power mod for the 820-830 some 20 years ago. This could account for 145 watts output.

The co. has been sold and I do not know if the mod is available. They continue to sell excellant 8 pole crystal filters.

10 Kw military surplus generator. 220/110 vac. 4-cyl gas engine.
Totally Self-contained. Engine runs like a clock! Gen set regulation
needs heavy load to flash the field coils but runs well otherwise. Could
probably use a cleaning of the relay contacts.

Set is on an 'un-sprung' two wheel trailer which is ok for short distance
towing... would recommend it for a long trip...

Price $750 obo. Will trade for small hf mobile.

Please e-mail responses

No Mike, it is not a rumor. I had an opportunity to test a friends T8A, (high power version), for a few days. It had already been modified by the selling dealer....Denver Communications of Denver, PA. In a nutshell here is what I found.....
RF Output on 220 Mhz. : 1 watt
Receive Sensitivity on 220 Mhz. using a 1/4 wave "Hotrod" AEA 220 Mhz. antenna: .35uv (yes it is very deaf)
While testing it in the field from my repeater, which has an output of about 100 watts, the HT worked fine within a few blocks. Any farther and yelling out the window would do better. At a local hamfest, "close" simplex work was fine, farther then about two blocks and forget it. In really plain english.....the HT is VERY deaf!

IRC marketed (and still dos) the "QRO Kit". aimed at the TS-820 and TS-830
(perhaps the 520/530 ?) market.

International Radio - now located in the "northwest" US states has the "kits" on
sale for $15 US. They
still market a wide variety of "superior" IF filters - now including the "newer"
Collins Mechanical filters.

I understand that the "Kit" consists of instructions and new screen resistors for
the 6146 x 2 final.......

Check the screen voltage on those 6146's - you'll find the "restorable" unit
probably has
a higher voltage on those 6146 screens....

CAREFUL!!!!!!! There's "killing" voltage in there! - Best do a "visual" check or
do resistance
measurements first......

No, I don't work for 'em, just a happy customer!

Scott KD6CQ

If you remember, 11 metres used to belong to the hams. It would
solved so much if we got it back, worldwide. The next WARC convention
should have on its table to increase amateur HF bands.

3808. [Icom] Dave's (N3CVJ) & Piero's (N3FVG) Review of the ICOM IC-T8A - RE: 220Mhz.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-06 00:00:00 UTC
From: Piero Sassu <n3fvgNOSPAM@worldlynx.net>
Message-ID: <355070C4.AB4B552@worldlynx.net>
Source record: 144885
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I am resending this since Dayton is fast approaching.....Just F.Y.I.

Hello Everyone,
Dave (N3CVJ) and I did a review/test of an Icom IC-T8A HT this evening. The IC-T8A is Icom's latest HT which has 6M/2M & 70CM in one neat small package. The ht has wide band receive (possibly enabled by a modification). The HT was lent to me by Dave (K3VF) who purchased it from Denver Communications and was modified by the dealer at the time of purchase. One of the features of the modification was it was supposed to receive and transmit on the 220 Mhz. band, and that was the primary concern for our test.
The HT was really "deaf" on 220 Mhz. with Icom's tri-band antenna so we decided to use actual 220 Mhz. antennas for the test. An Icom 220 Mhz. rubber duckie and an AEA "hot rod" 1/4 wave telescoping antenna were used on the HT. Dave first checked the power output on 220 Mhz. using a dummy load, a Bird meter and a fully charged 10v batery. Power output was about 1 watt on the 220 Mhz. band, very acceptable for local repeater and simplex use.

The receiver was a whole different story.....
The "normal" receiver sensitivity advertised by Icom was less than .18uV. Dave tested actual sensitivity on 2 meters to be around .14uV, very hot little receiver. When going to 220 Mhz. the receiver tested to be around .35mv. It would take a signal to be 40dB stronger to open the squelch on this HT, then it would on a normal 220 Mhz. HT. With the 1/4 wave antenna attached, the HT received the 224.200 Mhz. repeater which was only a couple of miles away, with about an S1. In a nutshell, this HT is deaf on 220 Mhz., even with a good telescoping antenna attached!

Other things to note.....
The small 10 volt battery does not last long at all.
Very small, multi-function buttons are difficult to manipulate for operation.
The SMA antenna connector will make it hard to use other antennas, you have to use SMA adapters, not available at Radio Shack.
You only receive one band at a time. Not a "true" dual or tri-band like the Standard.
It is very small, (about the size of a pack of ciggerettes) and has a good receiver on the bands it was designed for.

In closing, the HT is nice for what it was designed for, especially for the price, but Dave and Piero give it "Thumbs Down" for 220 Mhz.

use.

-A few downsides:
-
-a. The battery only has 680 mAh capacity

Depends on the battery. The BP-199 is 700 mAH at 6V, there is a 3 AA holder, and you can always feed it DC thru the power connector

-d. The antenna is a little too long. This is a cosmetic and handling
-complaint. It *does* seem to work well on 2m and 70 cm.

If you are only using 2M/440 you can use a smaller antenna. The big wart on the top is the loading coil for 6M

-e. The squelch is fixed; it cannot be adjusted.

There are multiple levels of squelch, but no full-range adjustment with a POT. This is common with many new radios.

All in all, it's a nice radio. I'm still waiting for the PC software to show up, and to build a programming cable...

Keep in mind that the T8 was not designed or advertised to work on 220.
I'll get the service manual (as soon as it gets printed) and see if there
is some way around this. I guess 220 Rx is gointg thru the 2M filter...

> there.

Just curious, but why did you buy it (vs. a dual bander)?

BTW I have a FAX in fronnt of me re a mod for TX and RX. Do not have
T8A, so I have not tried it (natually!):

"RX: Push and hold BAND and SQL keys while turning POWER on.

TX: Remove D54 on logic board to expand VHF and UHF. Remove D61 on
logic board to expand on 50 MHz."

Likely the standard antenna would not be good out of bands. And an
earlier message said something re being unstable on 220MHz. Also such
mods on some radios have oher effects (e.g., disabling auto repeater
offsets).

Agree. But sometimes hard to adjust, and does take a little
experimenting with noise antennas (I'm using a Hustler triple-headed
mobile antenna on the roof, now).

My Kenwood DG-5 digital display for the TS-520S has a problem with the display which I am hearing is common and I am looking for the solution. After about 3 minutes, the entire LED display goes dim. I have heard it is a leaky capacitor. Has anyone had any luck repairing this problem. Doesn't appear to be a heat problem with only 3 minutes. Also, upon power up, the first digit is always off by one. Any suggestions? I would appreciate an e-mail Thanks Paul pdnaumann@aol.com

I like the Bendix-King HTs. A little high in the price class
but it is type certified for commerical use. A lot of Emergency
Management/RACES types use it. It can be used on the State
Emergency Management Agency frequencies as well as ham freqs.
The VHF unit is also used by the Army.

I am waiting for the W-32 version. I want more channels (I travel).
Plus I like the W-32 format better.

BTW, Indiana must be the 6 metre king. There are 10 repeaters just
in Indianapolis alone. It seems every month there is a new repeater
going up somewhere in the state.

If the antenna ports are terminated with good 50 ohm loads, changing
the position of the power meter should not cause false readings.

>It seem that on average on 144 I'm losing 20% and 30-40% on 440.
>This seems excessive.

Yes, those losses are excessive.

>Is it good idea to go with like Diamond Duplexer which claim 0.2 db
>insertion loss which I believe 5%.

I haven't used the Diamond duplexers. I have used the Comet
and Weltz duplexers. Insertion loss is typically on the order of
0.2 db inside the respective amateur bands. I've never tested
them outside the amateur bands. The other figure you want to
measure is the band to band isolation. That should be as large
as possible.

> Anyone know of a circuit to exercise NICAD batteries based on amp
> hour rating, voltage etc...

Paul, although I love electronics and building things...MAHA has this particular "project" nailed for us with their MH-C777 Universal Battery Charger/Conditioner!

[No, Clint does not sell anything. He just appreciates excellence.]

-Automatically recognized NiMH and NiCad packs of 4.8V to 12V.

-Rapid charger rate is 650mAh.

-Its built-in conditioner will discharge to 1.0V per cell, then start to charge.

-After it's through, it trickle-charges at 40mAh.

-A set of three LEDs keeps you abreast of charge status.

-It has a magnetic sensor that you place on the battery pack - to protect from overheating!

-Its microprocessor detects both -dV and dT conditions.

And it will charge about any HT pack, cellular phone pack, laptop battery, and/or camcorder battery you have - WITHOUT buying extra "adapters" or "cups."

Comes, of course, with a wall wart. ALSO included is a cigarette lighter cord. So when YOU'RE fully-charged at your next event and your unfortunate buddy has forgotten to charge his backup, you'll impress the heck out of him while you charge his battery for him.

Sure wish this was available BEFORE I invested in $100./each drop-in chargers from Standard and Icom for my HTs ... but those aren't NiMH "intelligent," either!

HRO has this unit for about fifty bucks. I believe they waive shipping charges if you spend over one hundred bucks with them - so grab a MAHA NiMH pack for your HT - you'll really be pleased with both.

- Clint Bradford, KE6LCS

For Sale: SS-9000, very clean, all original, fully functional. Have seen a few SS-9000s, but this is by far the best. A few very minor scratches on the case. Two 1/8" holes in the top of the case between the grill slots, the only mod. Power supply equally clean, fully functional. no mods. Acquired from original owner. Original manuals for both units. Will be taking to Dayton, if not sold.

$900 shipped

Pre-Dayton-Hamvention Sale and Spring Cleaning

We often load up trucks full of equipment and go to the Dayton Hamvention. It's fun to meet many of the people we talk to and get away from the office. There is considerable expense in doing this and we would like to try a better way.

We have compiled a list of equipment that "would have gone to Dayton" and made it available in a file that can be sent via E-Mail, FAX'd or even U.S. Mail. We propose to make available a:

Tektronix List Available on 5-4

Hewlett Packard List Available on 5-6 AVAILABLE TODAY

Other than Above Available on 5-8

The Hewlett Packard List includes: Pulse Generators
Function Generators
Scopes
Display Mainframes
Oscillators
Analyzers
Atternuators
Counters
Power Supplies

If you would like the list E-Mailed, it is available in Excel and Test formats.

To get the list, either visit our web page http://www.valuetronics.com or E-Mail us at sales@valuetronics.com or valutron@aol.com. Tell us where to send it and we''ll attach the file to a return E-Mail.

This is a bidding process. The bid closing dates will be listed on the files.

The equipment is available to the highest bidder(s), no accessories are supplied nor warranties implied. We do offer an unconditional evaluation period on all the products.

3837. Lightning arrestors

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-06 00:00:00 UTC
From: kilroy <kilroy@f>
Message-ID: <6iqlsr$4dc$1@defiant.fuse.net>
Source record: 144914

Or maybe better, static discharge devices. I'm attempting to homebrew
lightning safety devices for my 300 ohm ladderline. The only clue that
I have is to use a spark gap for the big voltages, a neon filled lamp to
discharge static 'pre-strike' charges, and some moderate value fuses
that will hopefully open to protect my rig.
Does anyone have any information and/or schematics for this type of
device?
Thanks,
RSH

Wrong it also has to 600-999.990MHz and 300-400.
Infact mine receives from 50-1000 except for 230-300 !!!!

>
> The "call" frequency is individual to the band, but the memories cover any

> recommend doing)

Warning here as NiHi batteries dont need to be discharged and can lead to
cell reversal!! The great things with NiHi is they can be recharged at any
time, so I just plug in the charger any time I'm at home!!

> c. Intermod is bad
I've only found this on an external antenna like my 25-1000 disccone

> d. The antenna is a little too long. This is a cosmetic and handling
> complaint. It *does* seem to work well on 2m and 70 cm.

YES this is very annoying. When not using 6m I preferre to use A ZX-1R
antenna!

> e. The squelch is fixed; it cannot be adjusted.

WRONG WRONG WRONG!! read the book. hold the [SQL] button and turn the [DIAL]
it has Auto open and 8 levels.!!!

>
> I have yet to try the radio on 6 meters. We do not have much FM activity
> there.

6m is good and the other thing I have to say is with external power all 3
bands are 5W or more accross the band!!

The only two complaints I have are one rx modes are not selectable on all
bands, and half duplex (cross band) operation can not be programmed you have
to use two channels and keep turning the knob. This would have been an easy
thing for Icom to arrange yet they marketed it as a single band HT!!

I recon get one its weather proof and you have an extra band over the FT50!

Cheers
ERIC.

John:Icom's going to have to have type acceptance on the transmitter so what difference does it make?
I'm much more concerned about reciever characteristics, somthing that does not require type acceptance.

3845. Re: 2 m. vs. 70 cm.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-07 00:00:00 UTC
From: "Robert G. Schaffrath, N2JTX" <rschaffrath@acm.org>
Message-ID: <6itomf$e5k@bgtnsc01.worldnet.att.net>
Source record: 144622

I have found that 70cm has better "penetrating" capability from within a
building versus 2m. From articles I have read in the past I believe it
is due to its ability to be reflected off of steel beams and metal
lathing which helps it get out better than 2m. In clear space, you will
find 2m propagates a bit better. One thing I like about 70cm with the
repeater I use in Westchester County, NY is that either you are in or
you are out. There is no middle.

> FT-8500 and FT-8100.

Definately buy the FT-8500. I've had mine for two years and have no
complaints. It's a great radio at at great price. Go for the "Mr.
Potato-Head" Mic. It makes operating a pleasure while driving.

BTW, the radio does have basic CAT control, which was not mentioned by
anyone else. Although I've never seen any software applications written
for it.

Message-ID: <35543d2b.6476722@news.wanadoo.fr>
Source record: 144634

I have a THG71 , europe version ,

i made the mod to get the 4 bands :
- 118.000 136.000 am
- 136.000 174.000 nfm
- 320.000 470.000 nfm
- 800.000 950.000 nfm

i am not sure but on the 800-950 mhz band there is no RX , on my
MVT7100 and UBC9000 i listen GSM but not on the THG71

what is the problem ? to get the 4 bands i have cut the green wire ,
is there anything else to do ?

3863. Looking for manuals for METRUM II and GLB Synthesizers

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-07 00:00:00 UTC
From: p06288@email.mot.com
Message-ID: <6ish6l$84h$1@trotsky.cig.mot.com>
Source record: 144674

Can anyone please help?

I will pay reasonable costs to buy or copy manuals for the following three items:

MOTOROLA Metrum II VHF Transceiver

GLB VHF Synthesizer, (marked only with 'GLB')

GFb400B Synthesizer, (Marked only with 'GLB400B').

Thanks in advance.

Message-ID: <6ib7dk$96e@news.Hawaii.Edu>
NNTP-Posting-Host: uhunix5.its.hawaii.edu
Summary: This article provides a list of the rec.radio newsgroups; it
is
posted alternately with the longer "Guide to the Rec.radio
NGs"
Keywords: radio amateur ham cb scanner shortwave netiquette
X-Last-Updated: 1998/03/29
Version: 1.1 created 98/03/05 03:50:23
Posting-Frequency: posted on the 1st of each month
Xref: news.iamerica.net rec.radio.amateur.antenna:9681
rec.radio.amateur.boatanchors:8062

Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion
group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital

modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding
commercially-
built amateur gear; not for
buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman (KH2PZ / KH6)

May I suggest?
Don't get any radio.
Get a couple kits, and/or build from scratch a receiver
and transmitter of the simplest possible kind.

Say, a Regenerative Receiver and a CW transmitter
of low power.

Then make 50 contacts using this equipment, and
when you have done so, you will be in a much better
position to evaluate the sound of any receiver and
the reports of any transmitter.

I can't say why, in the space I allowed myself, but it is so.

Good luck.

3868. Yaesu FT-8500 vs FT-8100

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-07 00:00:00 UTC
From: hberg@0spam.uiuc.edu
Message-ID: <6islbn$32i$1@vixen.cso.uiuc.edu>
Source record: 144679

I am considering the purchase of a dual-band mobile and am looking at the Yaesu FT-8500 and FT-8100. There has recently been a big price drop on the 8500. Anyone have any opinions on these two models? I'm not sure about all the controls being incorporated into the mic on the 8500 - has that been convenient, awkward, or does it just take getting used to? The 8100 looks attractive since the controls appear to be more conventional. Yet I like some of the other features on the 8500, including the alpha frequency labels. The 110 memories are more than enough for me (vs. 208 in the 8100). The size of both units appears to be about the same (no dimensions are given for the 8100).

So, what say you? Dayton's rapidly approaching!

Thanks.

Actually he probably will not cause any interference to police bands. Police frequencies use FM which is not subject to static noise which is AM. Also, the signal at the vhf and uhf police frequencies will have been attenuated to a much weaker level than at the hf frequencies.

>Thanks in advance for any info... -DA

I used to have the UHF version (3500/3600?) many moons ago, and on
mine the CTCSS encoder was an option. It was set via a multi-position
DIP switch protruding frm the rear of the radio. If you don't have
dip switches (but have a label or some such covering the hole) then
you probably don't have the option installed.

I hope I am not steering you wrong here... it has been a long time
since I had that talkie!

rec.radio.swap,rec.radio.amateur.swap,rec.radio.amateur.equipment,rec.ham-radio.swap,alt.ham-radio.marketplace

I have one of the early TH-79A's which has been modified for extended Tx/Rx, and which covers up to 512Mhz on UHF. These are fairly rare, as the Microprocessor was changed in subsequent production runs, to only allow UHF operation up to 470Mhz. This is a problem for those having public service activities above 470Mhz, where they are forced to listen to an image.
My TH-79A will cover this range , both Rx and Tx, directly.
It comes with all standard accessories, manual, boxes, and includes the KSC-14 dual compartment, drop-in charger. I am also including 3 battery packs. They are all 6V, 2.5W packs, with capacities of 600, 900, and 1200 mahr. The 900 mahr pack is a new NiMH pack, and the other 2 are NiCD with new inserts.
The radio and all accessories are in excellent condition, both cosmetically, and operationally. and I will ship all for $315, ConUS.
If interested, please reply by direct email.

Probably early 20th century. Quenched gaps became common in commercial
use about 1910 or a little later, and lasted throughout the spark era
(up to maybe 1930 or a little later).

> a round ball with a hole in the side for the quench liquid, inside is the gap
> made up of two round plates about 3/4 inch dia on the ends of rods extending
> into the ball from two sides, adjustable for gap. The unit looks like it may
> be mounted like a large bus fuse, each end is a brass rod about 5/8 inch in
> diameter. Anyone know anything about this. Also have what appears to be a

Typically a quenched gap consists of a number of metal plates separated
by a small fishpaper wafer with a hole in the center. The spacing is
around 0.001-0.003 inches. There is only air in the gap, although,
once fired, it probably tends to make ozone to some extent. It is
not particularly air tight, but relatively so. The gap plates were
made very heavy and usually had an air stream directed from a fan
across the gap to cool it off. Each gap section (two ajacent plates)
had a voltage discharge of around 3000 volts, so a typical spark set
had maybe 10-20 gap units all in a row, with a heavy clamping assembly
to hold the units together in that row.

Your unit does not sound functionally sufficient for a quenched gap.
It is possible that it may be an early experimental gap, and they may
have tested various ``atmospheres'' (nitrogen, argon, etc) in it.
That would have given rise to the small hole maybe.

I sense it is more something like a spark arrestor for a HV spark
transformer. They had safety gaps across the secondary to prevent
too high voltage excursions, and keep the transformer from burning
out. It may also have been used in commercial HV mains, in some
way.

> spark generator mfg by Atwater Kent around the turn of the century. A small

> what have I found? K. Morton - doctorsalt@pivot.net

That sounds like a sign transformer or some type of laboratory spark
or Rumkorf(sp?) coil.

The start would tend to indicate it was used to fire off a circuit, such as a neon or maybe xray circuit from the early days. That might indicate it is not a radio spark coil.

Yes, you need to buy a decoder board. I don't know where one would get
one, but if you find out, let me know. I sold my 2600A to my Dad and he'd
like to use PL tones.

Assembly Language is the best!!!! I had to buckle down and learn switch-flipping,
but I will be the first to say it was worth it!!! I love assembly language to this day,
and have been programming computers since I was 15. Assembly language is computing,
it's a fundamental item that all computer owners should know. True, there are
many computer languages, but assembly language is the ultimate in basic
programming that works on any computer. Here's to many more years of the
assembly language requirement in computing!

If so, this would be kind of ironic, since (if I remember my radio history correctly) HF was originally given to amateurs because it was deemed worthless. :)

> repeater and simplex use.
SNIP

OK,,, but this really does not mean much. We need to know how clean
the
signal was! In other words, if that 1 watt was all on the intended
frequency
then COOL! But if that one watt a partially on the intended freq &
partially on one or more other freqs then that is NO GOOD.

The only way to check that is with a Spectrum Analyzer, all a Bird meter
tells you is how much power you have, it tell you NOTHING about
WHERE that power is! I would really want to check that out well since
the 2nd harmonic of 220 Mhz is 440 Mhz, where that radio is going to
have a
pass filter not blocking those signals!

Didn't the spark-gap transmitter have some kind of tuned circuit after
the spark-gap? Such a circuit would probably attenuate the harmonics
to some extent..

I personally don't recommend it. I owned one for 2 years and was not pleased. Within the first 4 months I had too traps go off frequency and had to have them replaced. Also with 60 radials attached and ground mounted the input impedance would vary greatly with ground conditions from season to season and the SWR of course would go very high especially on 40 and 80 meters. Also the hardware to clamp it to a mast is poor and easily stripped. Cushcraft was little help. Although they did replace the faulty parts. I had better luck with an old 5BTV I picked up at a hamfest. Besides verticals in my opinion are only good for their convenience, nothing more. Put up a dipole fed with 450 ohm line and use it with a tuner.

Mike - this doesn't answer your request in the slightest - but it looked like a desireable accessory for your little HT (ad copy from current CQ-VHF Magazine:

VX1-R Case - $12.50
Gateway Electronics
www.gatewayelex.com
Mail Orders - 1-800-669-5810

We have a case designed specifically for the popular little Yaseu HT. A fully adjustable case made of a durable polypro web material, it features an elastic side slot to store your spare battery or drycell case (some aftermarket antennas fit well here, too!), a heavy duty velcro closre to keep your radio secure yet accessible, and a super strong velcro belt loop to attach conveniently to your belt.

Purchasing a commerical amateur radio and putting
it on the air does not require technical skills, so testing for
technical skills should not be required to get a license. Radio
instructions tell how to operate safely and construct antennas.
Only old people who will be dead soon and people who know how to use
them already have tube equipment. Whenever the government requires a
permit or outlaws something there are those who do it anyway for the
rush. Eliminate the license eliminate the losers.

Burt

Buy the 8500,u won't be dissatisfied. The FS-10 is probably the best feature the radio has. It is very user friendly,works great with a gain antenna (very hard to overload) and has a very sensitive receiver. If u buy the software,make sure ur com port is set to 9600 bps and u will have accurate uploads and downloads. I've used this radio on packet on 2 mtr will talking to someone on 440 and connected to the internet browsing all at the same time with no ill effects. I have used this radio for crossband repeat nearly every day for almost two years without a glitch.

Good Luck
Dennis.

I think that you are confusing HF with VHF/UHF. The demand for VHF/UHF
is
almost insatiable, but it appears that the demand for HF is declining as
more and more SW broadcasters are folding their tents and going to
satellites.
I suspect that the unreliability of HF won't be able to compete with the
reliability of microwave satellite links and sometime in the future
these
HF freqs will be deemed useless and given back to hams. The tough part
is going to be hanging on to our microwave allocations.

Yeah; not a great mobile antenna <think I'm gettng tired and silly!>

..Wont be able to get back to get
> it until next year.I would like to but a used one at a descent price 150.00 or
> less
>

Serious advice: A dipole, if you have room/space, should outperform the
R5, and cost much less than $150.

3923. WTB: RF Amp, similar to AN779 design

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-07 00:00:00 UTC
From: palf@netcom.com
Message-ID: <6is156$74o$1@nnrp1.dejanews.com>
Source record: 144758

I'm looking for an RF amp which can deliver at least 10 Watts between 100 KHz and 20 MHz (although 1 MHz and up is also possible). Something similar to the Motorola reference design in AN779 would be appropriate. However, because my input power levels are between 0 dBm (1 mW) and 13 dBm (20 mW) into 50 ohms, this reference design would be better with a small preamplifier. I'm therefore in the market for possibly both a pre-amp and an amp, if such be necessary.

Emails to palf@netcom.com please.

: ENOUGH TO SEE CAPS DON'T MEAN SOMEONE IS YELLING AT YOU VIRTUAL BOY.

Your right, caps lock doesn't always mean that someone is yelling.
It could also mean that they don't know any better, and are being
impolite.

Did you also look at the date my license was issued?
Boy am I impressed that you found that out (note sarcasm)
I mean, there are only like, 100 callsign servers that are
listed on the major search engines alone? Big whoop.

Ok, I don't need to prove anything to you, so you have been a ham
longer, and you've got your code speed up (or at one time did)
but that has nothing to do with what I'm talking about here.

It's obvious to me that any idiot like yourself can post irrelevent
garbage to rec.* whether they are a ham or not. If you don't like
my tech "minus" status, and think I am somewhat impaired because of
it, I'll be happy to let you know that I'm *almost* up to 13wpm, and
I have my general CSCE and I can pass the advanced tests on the web
with ease. The only trouble is, I had a previous engagement during
the testing session last night, and was unable to attend.

Well, I'm done with my rant, I just wanted to let you guys know that
you are really not appreciated here. I'm not going to contribute any
more to the off topic, lame posts.

Hello:

Looking for an adapter between WR42 or UG-595/U which
is the Leetle Tiny stuff used at 18 GHz, and just about ANY
kind of screw-on connector (SMA, etc).

This waveguide has an internal opening of *about*
a little less than a quarter of an inch by a little less
than a half an inch, is rectangular, and uses a four-
screw (4-40!!) square flange. It almost looks "toy-like"
after fooling around with 2.5 GHz stuff.

Would also be interested in any kind of adapter/
transition from this WR42/UG-595/U stuff to anything
a little larger that I might already have a coax adapter for.

Any good used/surplus microwave "stuff" vendors
out there that you would recommend who might have
this kind of thing?

Thanks for your help!

> Anyone know of a circuit to exercise NICAD batteries based on amp
> hour rating, voltage etc...

Paul, although I love electronics and building things...MAHA has this particular "project" nailed for us with their MH-C777 Universal Battery Charger/Conditioner!

[No, Clint does not sell anything. He just appreciates excellence.]

-Automatically recognized NiMH and NiCad packs of 4.8V to 12V.

-Rapid charger rate is 650mAh.

-Its built-in conditioner will discharge to 1.0V per cell, then start to charge.

-After it's through, it trickle-charges at 40mAh.

-A set of three LEDs keeps you abreast of charge status.

-It has a magnetic sensor that you place on the battery pack - to protect from overheating!

-Its microprocessor detects both -dV and dT conditions.

And it will charge about any HT pack, cellular phone pack, laptop battery, and/or camcorder battery you have - WITHOUT buying extra "adapters" or "cups."

Comes, of course, with a wall wart. ALSO included is a cigarette lighter cord. So when YOU'RE fully-charged at your next event and your unfortunate buddy has forgotten to charge his backup, you'll impress the heck out of him while you charge his battery for him.

Sure wish this was available BEFORE I invested in $100./each drop-in chargers from Standard and Icom for my HTs ... but those aren't NiMH "intelligent," either!

HRO has this unit for about fifty bucks. I believe they waive shipping charges if you spend over one hundred bucks with them - so grab a MAHA NiMH pack for your HT - you'll really be pleased with both.

I used to own a Swan 500CX. It was rated for
550 watts output PEP. Just load it up and
keep it under 150w (300w PEP).

3941. Decoding Frequency Inversion and some split band

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-08 00:00:00 UTC
From: ctpds49@aol.com
Message-ID: <1998050815073900.LAA00530@ladder03.news.aol.com>
Source record: 144528

A 1496 balanced modulator / de-modulator circuit can
descramble variable frequency inversion.
With a lack of filtering in our DS49 it can decode some
of the split band as well.

Source record: 144530

After a quick review of my 1920 copy of Elmer Bucher's "Wireless Experimenter's Handbook", I agree with Robert that this is not a quenched gap device.

It does sound more like the safety gap used on the transformer secondary windings or some type of aerial lead lightening arrestor.

As Robert described, the quenched gap was characterized by a dozen or so large (2-4") copper disks, pressed together with insulating material between each disk. The disks were quite complex mechanically in that they provided an air-tight gap surface in the center, a concentric support surface, and the outer cooling flanges. The insulator disks could be the light-weight fish-paper wafer for low power, or a hardened rubber or other material about 1/32" thick for power up to about 750 watts. The insulating ring had a "donut-like" hole in the center for the gap between each metal disk, and was compressed on the concentric support ring between cast-iron end supports. A fan blowing on the metal flanges, kept them cooled during long, high-power, exchanges.

Ah, yes - the good old days!

3950. Modify Radio Shack radio for 2mtrs

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-08 00:00:00 UTC
From: Dave Johnson <dljohns@jeffnet.org>
Message-ID: <355335C4.47C5@jeffnet.org>
Source record: 144537

I'm looking for info on modifying a Radio Shack business band radio to operate on 2 meters or 137mhz weather sat freqs. RS model HTX121 or HTX122. These units uses seperate crystals to set rx & tx freqs, normally 155-156mhz range. Using a 2mtr xtal doesn't work because either the osc. or input circuit doesn't cover this freq.

Also does someone have a schematic for this radio?

Thanks
Dave Johnson

A 68 K resistor at the grid of the first tube
your guitar connects to and another 68 K resistor
at the tube right after the volume control
should coreect your problems.

The resistors have one end connected to the grid directly.
To do that U will have to pull the grid leak R and C, and then
connect this Suppresor resitor of 68K to grid, and then
connect the grid leaks RC to the other end of the Suppresor R.

This should fix the problems.

I would like to get opinions on the Icom IC-2710H, Kenwood TM-742AD, and Yaesu FT-8011R dual band mobiles. I wish to get a pair of one of these models for my two vehicles. I have seen some opinions on the Yaesu but none recently on the Icom or Kenwood. I know the Kenwood can handle another band, but I will not likely add it. I'm looking for a good, basic radio that is not too complicated for my newly licensed wife to operate, and one that can be seen well enough to operate in the bright daylight and nighttime darkness with old eyes. More Ford, Chevy, Chrysler (Mercedes?) debates!

Thanks,
Charles WA5VHU

Pre-Dayton-Hamvention Sale and Spring Cleaning

We often load up trucks full of equipment and go to the Dayton Hamvention. It's fun to meet
many of the people we talk to and get away from the office. There is considerable expense in
doing this and we would like to try a better way.

We have compiled a list of equipment that "would have gone to Dayton" and made it available in
a file that can be sent via E-Mail, FAX'd or even U.S. Mail. We propose to make available a:

Tektronix List Available on 5-4 SENT ON 5-4

Hewlett Packard List Available on 5-6 SENT ON 5-6

Other than Above Available on 5-8 AVAILABLE TODAY

The "Other thanHewlett Packard and Tektronix" List includes:

John Fluke Mfg., AC-DC Electronics, Advantest, Astro-Med, Anritsu, Arium, Bruel & Kjaer, BK Precision, Boonton, Dana, Data I/O, Dolch, Dranetz, EH, Eico, Elgar, EMI, ENI, ESI, GenRad, Harrison, Heath, Hickok, Honeywell, Keithley, Kepco, KH, Lambda, Leader, LeCroy, Marconi, Narda, Power Designs, Phillips, Pacific Measurements, Quantum, RCA, Scientific-Atlanta, Schaffner, Sencore, Simpson, Sorensen, Tautron, Velonex, Wandel & Goltermann, Wavetek, Weston, Yokogawa

If you would like the list E-Mailed, it is available in Excel and Test formats.

To get the list, either visit our web page http://www.valuetronics.com or E-Mail us at sales@valuetronics.com or valutron@aol.com. Tell us where to send it and we''ll attach the file
to a return E-Mail.

This is a bidding process. The bid closing dates will be listed on the files.

The equipment is available to the highest bidder(s), no accessories are supplied nor warranties
implied. We do offer an unconditional evaluation period on all the products.

I am entertaining offers for a Eprom programmer/copier. It is in excellent condition and has the instruction booklets with it. Made by Data I/O. Model 21A.

I'm not sure how old the unit is, but I do know that it was seldom used.

This programmer has a serial port in rear and can be configured for various formats. DG Binary, DEC Binary, Subformat Specifications, ASCII Hex, Intellec Hex, Motorola Exormacs, Tektronix Hex, Extended Tektronix Hex, and ASM-86 Hex.

The current offer is $175. You may place offer if you wish to do so. If you are the runner up (next lower bid) at the end of my sale and the high bidder fails to follow through I will contact you and offer it to you at your highest offer. I plan to stop taking offers on Saturday May 9 at 11:00AM EST.

It can by viewed at the site below. Buyer to pay shipping.

TEKTRONIX MODEL 466 OSCILLOSCOPE

This is a dual trace - dual time base 100 MHz storage oscilloscope
with both fast and variable persistence capture modes.
Vertical sensitivity is 5 mv to 5 V / div. (1x probe)
Horizontal time base is 50 ns to 0.5 S /div.
x10 mode extends the time base to 5 ns / div.

The scope is in excellent condition.There are only a few
scratches on the scope.
The scope is in excellent operating condition.
The following photos show the condition of the scope.

http://members.aol.com/utookit/scope.jpg
http://members.aol.com/utookit/scope1.jpg
http://members.aol.com/utookit/scope2.jpg

For additional information follow this link. Its not my scope shown but it is
the same model and the pictures are better. My scope does NOT include the DM44
Digital Multimeter.
http://www.techmax.com/oscilloscope/466scope.htm

The scope includes Front protective cover, Instruction manual, One 1X - 10X
scope lead, replacement CRT cover, Storage pouch (attached),Lead holder, and
some extra fuses.

The current offer is $350. You may place an offer if you wish to do so. If you
are the runner up (next lower bid) at the end of my sale and the high bidder
fails to follow through I will contact you and offer it to you at your highest
offer. I plan to stop taking offers on Saturday May 9 at 11:00AM EST.

Offers at $300 and above are being accepted. Buyer pays shipping and insurance
in advance via money order.

Contact me if interested.

Hi, time to clean out the shack, too much stuff. You ship all items. These rigs are from a non-smoker household.

** Radio Shack Pro-2039 Am/Fm Direct entry programmable scanner. Excellent condx
$150. i am original owner, and have box and manual.

** (2) Radio Shack 2meter HT's. Excellent condition, $100 each.

** Lafayette HA-460 Six Meter AM rig-with D-104 MIC. Works Great. Puts out 10 watts. Has crystal and a vfo. crystal set up for ops on 50.4 . includes manual $175

If interested I can ship FedEx at a discount. shipping approximately $10, at the highest $15. Or we can use ups....COD. Whatever You choose. I would prefer a US POSTAL MONEY ORDER, with the cost + shipping, just so you know. If you are interested, please email me, or call me in the Albany, NY area....518-383-8655

>If he's got a grid leak that's the problem! Plug it up.
Off topically speaking about grid leaks;
As i remember it, a grid dipper was intended to
replace grids that had leaked from a tube type rig.

There was a grid tank under the bench for the grids
to leak into, (got kinda smelly at times) and the grid dipper
was kept in or near the tank.

They never worked well at this.
Know why?

The Bias on the simple oscillator in a grid dipper?

Grid leak, of cuss.

Wherefore you could not keep the dipper full of grids
long enuff to get them back into the rig.

Thought you'd like to know.

Does anyone have a schematic of the Heathkit
IG-102 100khz to 110mhz rf generator. Mine died
after many good years. I can only guess that a tube
has gone on to better worlds. My problem is that
only one tube has ID numbers on it (12AT7) the
other tube is a 6A??A. If I can't get a schematic
can someone out there tell me what the 6 volt
tube's number is supposed to be??

Thanks

Hello All,

I just bought one two days ago. I guess your question about the receiver is a good one. It is hard to answer "how good is the receiver" compared to what? I had a Icom 765 which was one of the quietest and best receivers I ever had. I have been in Ham Radio for 33 years. I have had a lot of rigs. This one has a very good receiver and it has a RIT, DSP, and you can purchase filters of course. I don't have any of the filters and at this point I don't plan on purchasing any. I find with the IF shift and the DSP it is all I need at the moment.

The amazing thing about this radio is that Yaesu packed a lot into it for the price. It is defiantly worth it. It covers from 500 khz to 36 Mhz. All the ham band and the broadcast SW bands. AM,FM,SSB,CW. It covers 6 meters, 2 meters, and 440. It also covers all the satellite frequencies. I do operate the satellites now with a ICOM 820H which I think I will now sell. It has 3 separate so-239 connectors and one N-type for uhf on the back panel for the different bands. It has about 75 memories. It runs 100 watts through 6 meters and 50 watts on 2 and 440. The output is variable not fixed. It has a great built in keyer. I like cw and I give this on a scale of 1-10 a 7 on the the "break in" part of cw. I wish the relay was just a little quieter. I am used to hardly any clicking and this just has a slight one. (I am picky) when it comes to cw. It is about 3" high and 12" wide and 12" deep. It is on the small side. It runs on 12 volts and up to 20 amps. It has built in pre-amp and attenuator you can control voltage to external mast mounted pre-amps if you have them. This feature is used with satellite operators most of the times. 2 vfo's and you can work split operation quite easily. It has built in PL encode and decode for the repeaters. It has two settings for noise blankers, one is in the DSP circuit. It has a priority channel and you can set up band edges to scan also. It has a microprocesser menu to select from 41 different categories all of which have several functions.

Well I just rattled on. I hope that gives you some idea. There is more but you can ask more if you have any questions.

I don't have a technical manual, but the symptom you describe indicates one of the phase-lock loop circuits has lost the ability to lock. Have seen and corrected that problem in my TS-440SAT but doubt there is any useful similarity between the two units.

If you can locate a technical manual it should be straightforward to repair the unit.

Bob,

I've really enjoyed mine for the almost 3 years I've had it! Of course, I don't "scan" around with it much, just use it to listen to various ham, public service, and FM broadcast frequencies that I favor.

Perhaps more hard-core scanner folks would have some complaints about it but so far I have nothing bad to say about the one I have. Just make sure you get an extra battery so your listening/scanning won't have to be interrupted. I leave one on charge and use up the other, then swap them out. Takes me about 3 days to do that, with it "on" about 1 to 2 hours per day.

From: Chris Buckley <cwbuckle@mtu.edu>
Message-ID: <3553360A.591F0B42@mtu.edu>
Source record: 144635

Well, I was having some of the same thoughts as you, and eventually let my
wallet do the talking. I went with the FT-8500, with the FS-10 controller
microphone. One thing that helped make the decision, although it's probably not
a very good basis, was the strange difference between pricings:

Radio Retail AES
8500(FS-10) $859 $599
8100 $699 $579

I got mine from Burghardt at $379, so I'm not complaining.

The FS-10 is definately interesting. I was really worried about that when I got
the radio, but I think it's going on the '+' list. Here's my overall take on
the radio:

Con's:

To remove the microphone, you must remove the face.
Cross-Band reapeater requires shutdown.
Expensive detachable face kit.
Expensive programming kit.
You need a separate box to use the serial port
programming interface.
Dimmer range could be more extensive. (too bright at night)

Pro's:
The faceplate, once you get used to it, comes off easily.
(You also have to 'break it in' but eventually it's easy)
Packet hookup
Separate speaker jacks for UHF and VHF
Controller microphone. Excellent. I can operate without
looking now, 100% by feel. Great for mobile use.
All menu's and major functions available without turning radio off and on
while holding buttons. (see above)
Less heatsink, more fan! (Quiet fan, at that)
Programmable buttons on the mic.
Direct frequency entry from the mic.
Extensive manual.

Overall, the display is great, it's large, and the radio is easy to operate.
The FS-10 is a little hard to get used to. I would reccomend using the radio as
a base station first, so that you can
get used to the mic without worrying about keeping it on the road.

The hardest thing to get used to for me was the joystick on the mic.
Sometimes I would do the diagonal thing when trying to go left and right, and
other times I would move the joystick when trying to press on it like a button

(which is a common key-press)

It takes a little while to program, which is why I would consider the whole programming software thing, but other than that, this is a great radio. If you have any specific questions, I would be happy to answer them.

Thanks,

Chris

Judging from your picture on QRZ you don't look too much like a spring chicken yourself. Very interesting comments for someone who is an extra class license. I don't think I will fan the fire on this one except to say there is much more to setting up a station than pluging in a radio and connecting an antenna. Public saftey and service, band plans, various modes of operation, personal saftey are all inculded along with the technical stuff. This isn't a perfect hobby but it sure is fun.

Why bother with any license, Driver, Pilot, Medical etc...

>FT-8500 and FT-8100. There has recently been a big price drop on the 8500.
If you are going to use it mobile, the FS-10 allows for pretty
much vision free setting. This makes driving, without having to stare
at the radio for 30 seconds every time you want to change freqs, much
safer. The display is also easy to see, even at an angle in sunlight.
The only downside I have found with the 8500 is that there are so many
buttons and controls on the mic that whenever I transmit I
inadvertantly change volume control, channel, or some other setting.
You just can't grab the mic and squeeze without screwing something up.

: Brian

70cm is generally less crowded. 70cm also requires more line of sight to
the receiving antenna based on the fact that it's UHF and not VHF, but
the use of repeaters helps eliminate this problem. I can actually tell a
difference in the winter vs. the summer when using my HT and working
local repeaters. All I can figure out is the foilage on the trees.

Hmmm.... I have a license and I'm definately not a loser! I'm also a law enforcement officer who frowns on people on people who do whatever they want regardless of the applicable law concerning the action involved. If that were the case we could all go to the local hardware store a buy some plutonium or other similar material. Of course, we would all know it was dangerous, but what the heck, we could buy it anyway. Also, I'm not old and don't plan on dying anytime soon. I feel that it is an honor to have passed my tests 2 years ago. Besides, one should always strive to continue to learn new things. Once you stop learning, you _are_ dead. Just my 2 cents worth, it's not meant as a flame of any type.

3989. Re: Is IC-706MKII any good (e-mail)

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-08 00:00:00 UTC
From: kc5kbvnospam@gte.net
Message-ID: <6itqrhqcj1@gte2.gte.net>
Source record: 144644

Bottom line....it is. Sure it has a LOT of bells and whistles, and
might be a little tough to get used to but IMHO it is the best xcvr
availble for under $1,500. The only gripe I have is it has a broad am
filter (for SWBC /MW BC rx), but putting in usb or lsb makes listening
more pleasureable.
Several local hams have both the old and new version. I'm glad that I
waited for the MKII.

Um, folks.... Feel that tugging on your pantleg? C'mon, don't take this guy seriously. Obviously this guy who CALLS himself K1OIK (I have to wonder if that's who he really is) is out for yuks and is trying to take the concept of no-code licensing to an absurd extreme of no-LICENSE licensing. See? Sheesh....

Hey, don't get me wrong -- I like a good goof as much as the next guy, but I come here to catch some deals on ham goodies. It would be all right with me if the alledged K1OIK would give it a rest or take it somewhere else. In fact, I feel a little bad even giving him the time of day with this reply, but it's time I suggested that those who are put off by this guy's material just ignore it and move on. When he gets a rise out of you, he gets what he wants.

To the so-called K1OIK, one request -- It's a big Internet. Go find a flame board and have some REAL fun. Your schtick just gets in the way of what most of us come here to read.

73 anyway....

3991. FS: 13 HOP HARRIS 2 GHZ ANALOG MICROWAVE SYSTEM

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-08 00:00:00 UTC
From: jleikhim@nettally.com
Message-ID: <6its1j$h99$1@server.cntfl.com>
Source record: 144646

We are taking bids from interested buyers for this fairly new
equipment in very good condition. System consists of two terminal
sites and eleven repeaters on factory racks which were recently
removed from operation.

System is 2 GHz HSWO analog.

Models are FAS2000 radios, include ARDAX model 701A orderwire, Larse
A90-1242A0401 Alarm panel,

(Sorry mux was sold)

Larscan 1000 Alarm Control Unit
Andrew 8 foot and 10 foot grid antennas and mounts

The system comprises a complete 13 hop analog FDM microwave system
less mux, batteries and coaxial cable.

All electronics are stored in dry warehouse in north florida. Antennas
are located elsewhere but are removed from towers.

Interested parties please send e-mail for comprehensive inventory.

Buyers will be expected to arrange for own inspection and
transportation of equipment. Terms are cash.

Why don't you cover some of those old CB inspired songs like "Convoy"
and that way the audience will think it's all part of the show.

3995. Re: 2 m. vs. 70 cm.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-08 00:00:00 UTC
From: T E I X E I R A <teixeira@ccnet.com>
Message-ID: <355291E7.3EE1@ccnet.com>
Source record: 144650

Our local repeater has the 2 meter antenna 250' higher than the 70 cm
antenna and the 70 cm works better. I have also found that with the
mini low per ht's the 70 cm work better than the 2 meter. Obviously
this is partly due to 70 cm requiring a smaller antenna.

I must disagree. I have one mounted on my roof with the Cushcraft
matching radial kit and can work all bands from 10 to 75 on it.
Granted the bandwidth is narrow on 75, but I get out to a net on the
west coast every night on 3856 (I'm in Detroit). I've worked 70
countries on 20/10/15 with no troubles as the previous posted
documented. I found the quality to be excellent and the assembly to
be simple. A great alternative to the R-7000. Maybe the previous
poster just had a lemon.

3997. Re: Users of ICOM IC-T8A...

Source record: 144652

It is an excellent radio, recieves FAR more than Icom advertises
it will. As for the Squelch if you ill hold the SQL (squelch) button and
then TURN the knob (as all of Icom's newest line...) you can set the squelch
between 8 settings and Automatic and Open. So no it is not fixed. The TX
audio on mine is great, I have to hold it about 5" or more from my face
otherwise I am TOO LOUD!!! Hmm, sounds to me like you got a bad one. I would
send it to Icom and have it checked. It is an EXCELLENT radio, TX is great
on ALL bands... 6m, 2m and 70cm. HOWEVER the radio CAN be modded to TX on
220MHz but it is VERY deaf from about 220-285MHz... I mean VERY deaf. So, it
really isn't worth it. Well, if anyone wants more info on this GREAT radio
that Icom has made then E-Mail me or just post here. Thanks....

Source record: 144655
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

Howdy,

I have noticed a problem with my VX-1's decode function. When there is CTCSS DECODE data programmed into a memory channel, the radio will not stop on that channel while scanning. It pauses briefly, then resumes scanning, not opening the audio. If monitoring a single channel, (not scanning), the decode works fine, its just when the radio scans that the problem occurs.

I am wondering if other amateurs who own VX-1s are encountering the same problem. Yaesu has said this is a problem with all VX-1s, but I have my doubts. I would appreciate feedback from anyone who is having or is not having this problem with their VX-1.

Granted, its not that big of a problem, but I'm in an intermod proned area, so its an important feature for me.

For the same reason one would use 80 meters instead of 20 meters.
Just a matter of choice. It's one of the bands we have available, so why
not use it. As a rule of thumb, 70 cms gives about 10 percent less
range for the same power as 2 meters. However, UHF seems to
be better at covering downtown areas (large buildings) like Toronto
or New York. Having used both VHF and UHF commercially,
I am rather dissapointed at the coverage on UHF for the same
power and antenna types.

Regards
Reed

I have found 70cm almost useless (for what I use it for). It's range
is significantly less than 2m in the eastern mountians. I tried it
in a large exhibition building 2m still was several S units better. (We
used dual band HT's with dual band antennas walked until 70cm was not
longer readable then switched to 2m and continued walking. We did this
in the Atlanta World Congress Center.) I haven't even been able to get
it to work well crossbanding from a parking lot into a mall. 2m still
comes through better.
Ok, not not scientific studies but my experience.

"Steps" are the frequency increments by which the
scanner searches. Supposing you set up a Search
for 868.950 - 894.000 MHz, the scanner would default
to some predefined "step". The above is the USA
cellular base band. In Europe, the increment between
"channels" is 12.5 kHz; in the USA it's 30 kHz.

Depending on the band and the scanner, "steps" are in
5, 10, 12.5, 25, 30, 50, and 100 kHz increments. Many
scanners so not offer user-selectable steps; some do.

In any event, "steps" are a Search function, not a
scan function. Depending on the band and the scanner,
you can program in a series of frequencies as little
as 2.5 kHz apart. This increment is not called a "step",
because programmed channels are a SCAN function, not
a SEARCH function. Steps are a SEARCH function, you
see, where the scanner's CPU takes control of the
increments within a band where the frequencies are
sampled for activity.

Again, most scanners do not allow the user to select
the SEARCH steps, BUT prior to 1994, GRE cellular-capable
and cellular-modifiable scanners had the desired 30 kHz
default steps for the cell bands. All scanners made by GRE
did whereas all Uniden scanners defaulted to 12.5 kHz steps.

You can see, then, where in the USA, 30 kHz steps are
"right" and 12.5 kHz steps are "wrong". A scanner stepping

in 12.5 kHz increments would take over twice the desired time to cover the cellular band as one that did 30 kHz steps. Furthermore, a 12.5 kHz stepping scanner would not hit center frequency except every 150 kHz. At every step, it would be a minimum of 5 kHz "off frequency" except at the 150 kHz markers which is evenly divided by 12.5 kHz.

A 30 kHz stepping scanner would take 5 increments to cover 150 kHz whereas a 12.5 kHz scanner would take 12 increments to cover the same range.

A list of cell-capable and cell-modifiable scanners is contained in my regularly posted SCANNER MODIFICATION FAQ, the latest version of which was posted within the last 24-48 hours, so you can refer to it for the "list".

For some reason the cable for connecting the Kenwood TH-G71
to compuer is not sold in europe.
The cable is called PG-4P.
Do someone have a schematic of this cable?
Is it active components in it?
...and how is it wired?

Thanks for any input!

I have a new 2710h, (six weeks old) that everyone complains about the
extremely "hot"
audio on. I'll call Icom's tech support on monday. (they have banker's
hours). Does
anybody know if there's just a pot in the rig to adjust the deviation? Or is
it more involved
than that. Maybe just a switch from that idiotic potato mike? Very
dissapointed, since
my old ic2350 (sold) had perfect audio. Thanks...

Even if the N.R.C. were still in existence, I doubt if they'd
want to know. Also the cost would be prohibitive.

>b) IF NOT - is there any other company in the UK or USA that
>would be able to help?

Maybe. But I shouldn't think that receiver would be all that
difficult to re-align. There are many HRO enthusiasts around
and I'm sure you could eventually find one who has the
equipment and alignment data and who would be prepared to
help.

Try adverts in RadComm, PW and HRT.

You don't need a Mars mod to extend the receive range. Call Icom tech support (425) 454-7619, and they will instruct you step-by-step how to extend RX. It is quite simple and legal, it won't make the radio receive cell frequencies.

If you don't like the original mike gain on 2710H it can be modified to reduce it. There is no need to send the entire radio to Icom ,just the HM-98 mike. Deviation adjustment will change just that: deviation. It has nothing to do with how sensitive the mike is.

Adnan, Icom America

4035. Need Advice: Which 2M/440 dual or 6M/2M/440 tri-band HT the best

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-09 00:00:00 UTC
From: James Greiner <jgreinerATSYMBOLglasscity.net>
Message-ID: <3554c921.0@news.glasscity.net>
Source record: 144492

Hi,
I just passed my test for my Tech license and am planning on purchasing my first HT next weekend at the Dayton Hamvention.

Some of the units I'm considering are:
Yaesu FT-50RD (2M/440)
Kenwood TH-G71A (2M/440)
Icom IC-T8AHP (6M/2M/440)

Any comments from users of the above units, or suggestions of other brands/models with similar features (minimum 5W out , split band operation, PC programmable) that I should consider would be appreciated.

Thanks,
Jim Greiner <jgreiner@glasscity.net>

Been there, done that. My two cents:

Avoid an HT, and buy a Yaesu 8500 mobile, and an Astron 20a power
supply.

Reasons:

a. HT's are low-powered, static-filled, short-lived battery supply and
limited usability (you're restricted to a repeater, no simplex).
What's the first thing someone asks when a ham has a bad signal? "Are
you on an HT?!"
Transmitting SUCKS the battery down amazingly fast.

b. Mobile can be used in the car, un-mounted and used in your house
also. You have a healthy fifty watts to work with.

c. Price: You can't beat the 8500's currently slashed pricetag.

Again, IMHO

We have written a Toroid software package for use DC to 300 MHz. Many Years of research has gone into error corrections for the low perm cores , 200 & 360 degree coverage as well as SRF for series and shunt coils. Much of this has come about as a request from Micrometals. The pin point accuracy allows us to add a custom core feature for custom shaped cores, stacking cores side by side and machining custom phenolic cores from plastic, teflon, wood, ect...
Down load a demo or just view the software main screen at our web
http://members.aol.com/Toroids/johnindx.htm

Fellow hams:

The AM transmission on 3945 in the evening eminates from the Deutsche Telekom station at Juelich, Germany, and is a programme of The Overcomer Ministry by Brother Stair in Walterboro (USA).

If you wish to make comments to Deutsche Telekom you may Email them at:

info@dtag.de

If you wish to contact the source of the subject content of these transmissions, contact Brother Stair at:

overcomer@lowcountry.com

I am sure both Deutsche Telekom and Brother Stair would like to receive mail from all those interested in this problem.

From: Rod <RODWALL@prodigy.net>
Message-ID: <3554F17B.210C@prodigy.net>
Source record: 144505

Hello,
I think I took on a bit more than I can chew!

My club has two Sharp MZ-100 laptop computers and we have run them
on packet before, but the program was not the best. I think it was
something like procomm or the like. What I would like to do is to set
these computers up with a HD, 10 or 15 megs would be fine. I do not know
if it could be done as I am not sure of the availability
I would like to use a packet program like PAKET 6.1 as it seems the
most "friendly".
These are nice little computers and can be used but loading the
program can be a "treat".

Thanks and 73 Rod KB8DNS

Six meter - But unlike two meters you need to have a base, horizontal antenna, better with a beam and may be a vertical antenna. (Sometimes FM Mobile there is some skip!)

I agree with you Kurt, and try to operate that way as well, but lots of
times its $2000 instead of a hundred. Then, youd better wait the check
out huh? COD is a Pain on the senders side, UPS has kept my money up to
5 or 6 weeks. I wont do it, unless theres no other way. And theres
always another way, I can take credit card thru the music store I
retired from. Others dont have that luxury, but Im working on it. Was
thinking of some kind of exchange where I could take the card for anyone
for a small fee and foreward and check or money order or......? it could
work. Too much liability tho, gonna have to work on that. Probably
gonna get introuble for cross posting here. But Im doing better, leaving
rec.radio.amateur.equipment alone and LOSING SALES Im sure! GUDAY
MATE! Murray

I have a THG71 , europe version ,

i made the mod to get the 4 bands :
- 118.000 136.000 am
- 136.000 174.000 nfm
- 320.000 470.000 nfm
- 800.000 950.000 nfm

i am not sure but on the 800-950 mhz band there is no RX , on my
MVT7100 and UBC9000 i listen GSM but not on the THG71

what is the problem ? to get the 4 bands i have cut the green wire ,
is there anything else to do ?

Tower For Sale My friend is a ham who just passed away. He had just ordered and received
a U.S. Towers 70 foot fully motorized crank up tubular tower. It includes the indoor control
box to raise and lower the tower automatically .It is brand new and was not installed. He
paid $6000+shipping. His wife would take $3800. You can call me at 516 486 1861. We are
in New York on Long Island. KB2VX Rob. qin2@aol.com. Thanks The items from the
receipt are: MA-770mdp 70' tower w/motor drive, MAF-770 Raising fixture, MAB-770
Hinged base, RMC-1000 Remote control w/limit switch, CX-4M 4 Coax arms for MA-770.

Source record: 144582

My Opinion:
I have two of these radios. This may be the best overall value in a dual band ht. The menu is easy to use once you grt used to the odd placement of the function key. I also don't like the power on off button. The symbols on the lcd are too small. But these are minor compared to the overall performance.

The built in dual band cross band repeater was usefull during a recent ares set exercise. It extended the range of my other ht's in "simplex" quite a bit.

Just another attempt at getting support for their efforts to run other
operators off of 3950 and jam those that don't leave.
Also it sounds like it may be to indoctrinate some into the sub-celss that
are used by the western imperative network , a white supremist organization
that some of the "So Called" net members belong to. To find out more before
you sign up for any e-mail list check out http://www.usaor.net/users/ipm/
This is the net supposed Folk?? Journal web Page and is also the page for the
western imperative network read some of the stuff there.
LOOK at all of the pages I have listed below to find out what the "So Called"
Net is really about. take the http://www.officer.com and then take the
hate directory and about 90% of the way down that page you'll see the "So
Called" Liberty Net listed as a HATE GROUP! 73 de KK7HO

Hello,

I have a Panasonic KXL-D740 Portable CD-ROM Player for sale. It was purchased new about 14 months ago for $399 at Staples. It has had very little use, I guess I am just not a CD-ROM person?

The player works with any Laptop and is wonderful while working portable station on field day or when just camping and hamming. With a laptop, put your call-sign CD-ROM in the player and you have instant access to tons of callsigns at your finger tips...

Although I personally do not own one, MANY of them are owned by members of radio groups i am affiliated with. They seem to be universally appreciated - for not only their great pricing, but for the feature set AT that price, too!

A couple minor "in warranty" service problems that I've heard about were handled efficiently by ADI's West Coast office. NOTHING troublesome to speak of - and I'm around MANY of them (probably 20-25 separate owners).

4090. FT-847 with ATAS-100 Review

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-09 00:00:00 UTC
From: Len <umina@ultranet.com>
Message-ID: <6j1i25$8qq$1@strato.ultra.net>
Source record: 144599
Cross-posted to: rec.radio.amateur,rec.radio.amateur.antenna,rec.radio.amateur.equipment,uk.radio.amateur

I recently purchased an ATAS-100. My experience was not that good. It tuned well in manual mode (you transmit and hold down the Mhz buttons up or down to make it get longer or shorter to resonence). In automatic mode it did not work at all. I returned it for another unit.

The new unit at first appeared to exhibit the exact same problem, no automatic operation. Then suddenly it started working correctly. Correctly means that you push the tune button, the transmitter turns on and the antenna adjusts itself for low swr and turns the transmitter off.

Just as suddenly though it stopped working. The only thing I've been able to correlate with this behavior is that if I start doing manual tuning eventually it will somehow enable automatic operation. Once it starts automatic operation it will stay operating automatic mode until I turn the rig off.

To date, in spite of several hours of trying, I cannot find any way to get automatic mode to work reliably.

The manual that comes with the ATAS-100 is a 1 pager, mostly Japanese. There is no schematic and nothing on the operation of the antenna, so it's impossible to debug the system and figure out what might be causing the problem.

Of course the bands haven't been very hot lately either.

My impression of the ATAS-100 is that Yeasu should have done a much better job with this antenna. I'm not sure if there is a firmware problem with the 847 (incidently I've tried three different 847's all exhibit the same problem, now two ATAS-100's, and two different antenna mounts) or just an engineering problem with the ATAS-100 itself. I will say that once resonated the antenna works great, but right now resonating it while mobile is a life threatening operation.

Thanks for reading this. I bought what I thought was the top of the line Dual-band radio IC-2710H now i find out that I can't work FM Repeater on MIR cause the stupid radio won't tx or tune below 440MHz. The people at HRO in Salem NH. tell me I need Mars/cap mod to get the freq's I want, but they took my money but won't give me the mod. Something about a Mars license. (bull shit) I should have bought the Yaesu 8100r it goes where I want right out of the box. Enough flame sorry, can any one help me out with this, other wise a got a $500.00 dust collector.

Also, its suppose to do crossband repeat but I see it only doing uhf to vhf, I want to be able to do it either way. My Standard 5718 dose it and again the Yaesu 8100R dose. (I know should have bought the yaesu)

Any help would be appreciated,

73, and thanks in advanced... -Jim- (kd1oq)

Len,
Can I humbly suggest you junk it and buy a Screwdriver antenna, it'll
eat it for breakfast in the performance and tuning department.
Yes, you can junk the auto ATU as well, you wont need it.

Hi
I've been researching getting a scanner and when asking about restoring
cellular to older scanners, I've been told : "Yes, but the
cellular works in 12.5 kHz steps, not the desired
30 kHz, so don't lick your chops or hold your breath." (3000xlt)

What does this mean, and more importantly, what scanners do the "right"
steps?

Thanks!

Bob

I reply to Len,

I bought one of these antennnas with my FT-847, mounted it on
top of my Ford Expedition with a quad-leg mag mount and it works
PERFECTLY. This is the best mobile antenna I've used (including the
screwdriver). Are you sure you changed the menu item from TUNER to
ANTENNA??? I'd do a full reset of the 847 and then setup the menu item
and try again. I have had great results on 440 through 40 meters with
this antenna. I can't believe you've had all of the problems that
you've had!

Hi John,

Your newsgroup post re: the IC-T8A was interesting. I just passed my test for my Tech license this past week, and the IC-T8AHP (high power version) is one of the units I am considering for purchase at the Dayton Hamvention this next weekend. Since the only info I have on this radio are from Icom's web site and your letter (the rest of the letters in that news thread have expired), what else can you tell me about it (likes,dislikes,ease of operation,if you use the PC programming feature what does the software have to offer feature-wise, you stated that it "receives far more than Icom advertises" so what other bands does it receive that were not advertised and will it require a mod to receive on those frequencies etc.)?

Thanks in advance, your assistance/guidance in helping me make this decision is appreciated.

It is a well known mod actually, but requires changing a surface mount resistor inside a microphone (2.2 KOhm to 560 Ohm). Due to density of components on the PCB, and small size of the resistor, it would be hard to describe which one needs to be replaced. You can call Icom tech support and they will send the info to you.

Fred,

When mine works it works good, when it doesn't it doesn't. I just did a drive home and got it to work after tuning manual on 10 meters. Once it started working it worked all the way home and I couldn't stop it. Once I got home it stopped working (but I can't figure out why) and I could not restart it for anything. My guess is that I have an intermittent DC connection in the coax or that theres a ram location that isn't initialized properly and when you power down you can lose it to an unknown state when you power up again.

I'm going to replace the coax and see if that helps. I'm also planning to move it to the roof. Do you know the SN of your 847? I'm wondering if they had a firmware change.

73,
Len

I has 4 antenna connectors, HF, 50 Mhz, VHF, UHF. Under menu control you
can send 50 Mhz out the HF port if you wish.

Bill Cheek <bcheek@san.rr.com> wrote:
: "Steps" are the frequency increments by which the
: scanner searches. Supposing you set up a Search
: for 868.950 - 894.000 MHz, the scanner would default
: to some predefined "step". The above is the USA
: cellular base band. In Europe, the increment between
: "channels" is 12.5 kHz; in the USA it's 30 kHz.

Well ...

Allmost right. :-)

In Europe *cordless* phones use 25kHz steps.

Cellular (from 890 to 960 MHz) is all digital, multiplexed
(8 connections per chanel), and scrambled! It uses 200kHz
steps.

There is another digital cellular phone system operating
between 1710 and 1880 MHz, about which I don't know the
details. But it too doesn't use 12.5kHz steps.

In some european countries there is an "older" public phone
network operating between 450 and 466 MHz that uses various
stepsizes (20/12.5/10 kHz). It's analog, but truncted and
scrambled.
Those are not *cellular* phones.

There used to be another, which used some bands within the
148 to 163 MHz range, but this one has gone outof service
a few years ago. It used 20kHz steps and communication
was in the clear.

BTW: You're not allowed to listen to any of those over here. :-(

While you seem to know a lot about how things are in the US, you
should better inform yourself, before publishing "facts" based on
guesses. ;-)

If somebody *realy* is interested, I can post (or mail) all the
details I might be able to dig out.

Regards,
Friedhelm

Having some hum problems with my K.W. TS-140s and a PK232. When I have the din connector plugged into the rig for rtty, I get hum on my audio when transmitting on phone. I could have the pk232 turned off and i still get hum. I pull the din connector out and the hum goes away. Bad ground? Bad connection? BTW, rtty works like a champ. Any ideas would be greatly appreciated.

I have the EE but have a horrible time at learning morse. I was
interested in ham radio when I was 9 (1959). But I was not licensed
until 1968 (WN9WKU). I do not know what blocks me from learning
the code, even learning the letters in difficult.

I have found that the MFJ code tutors seem the best for me. The
flexilbity of the computer code tutors with the convenience of tapes.
But I still am blocked. Can anyone (and I really need someone with
great expertize) help me overcome this? I did speak with the guy
who wrote the program for the ARRL. He said that individuals with
faster brains needed to not start at the lower code speeds as their
minds are not pushed hard enough at 5 wpm (most do better at 20).

Hummmm.
If CW is a dead, outdated mode of operation that does not need to be
used, when was the first digital/Packet/amtor/etc. contact made via
EME? As far as I know it is yet to be done by any amateur.
Seems to me that a fellow should be able to express his passionate

enjoyment and opinion about a facet of the hobby without being called names mearly because you disagree with his empasioned opinion. I don't find it a real thrill to collect stamps or read the latest best seller list novel, yet for others, its as good as it gets for them. Why bash him over it.
Oh, BTW, don't get me wrong, I think the days of REQUIRING someone to learn to send and receive code at any speed above 10WPM just to gain use of most of the HF spectrum is realy unnecessary but I do think keeping the 20 WPM requirement for the Extra is a must. WHY?
Try to operate at less than 20WPM in the bottom 20khz of 40 meters and chase DX and see how many you can copy. Or almost any of the bottom 25khz CW allocations for that matter. Most of thoes ops like to cook along at 20 or better because they enjoy that mode and they find alike minded operators there to talk too. Thats their little piece of the spectrum Pie.
If, collectivly, we don't try to make this hobby/public service grow and prosper, we will be doomed to obscurity in perhaps as few as 15 years. The constant bickering about the code, the ungentlemanly and abhorent operating practices and QRM battles that rage on in some of our HF spectrum should embarass us all. We are getting as bad as CB was in the late 70's. (My only operational time on thoes frequencies as a point of reference.)
Pulling our collective heads out of the sand, pulling together for the mutual benifit of the service, and putting this petty bickering about what we must learn to be permitted to operate in a spicific area of our total radio spectrum, demonstraiting public service, educating thoes among us who do not have the knowledge or skills and operating as a united society with ethics and respect for each other is not just a "nice pipe dream"; it is the only thing that will bring us solidly into the next century with the tools to hold on to what we all value most. Our license and the ability to communicate on frequencies solidly held by us.

Ok, now I have vented my opinion, didn't insult anyone, left myself open for both praise and ridacule, and I'll leave it there to chew over a bit.
Thanks to anyone who took the time to read this.

Hello, group!

I'm one of those guys who works about 90% CW (and loving it). But I do like some ssb activity, especially for DX and contests. I'd like to hear some opinions on microphones for ssb. If I had to choose between punch and "broadcast quality," I'd choose punch.

I've heard many people praise mic elements by Heil. And I *think* I heard that a Heil 4 or 5 is a "punchy" mic and a Heil 6 is your more mellow option. True?

Opinions wanted!

Thanks all.

Hi,

I recently picked up an old TenTec Century/21 CW rig. It works OK, but has no output on 15M. So, I'm looking for a service manual or least schematics for the rig. Can someone help?

4151. FT-847 MOD VERIFIED.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-10 00:00:00 UTC
From: Pieter <ibelings@mindspring.com>
Message-ID: <6j3a15$q2m$1@camel20.mindspring.com>
Source record: 144428

I Just received my FT-847 radio and performed the out of band modification.
It works great.

MOD
Remove bottom side cover.
Locate Lithium battery
There are six pads to the left of the battery labeled 1,2,3,4,5,6
These are JP1001,JP1002, etc
JP1001 is already jumpered with chip.

ADD SOLDER TO PAD 2 AND 3. LEAVE PAD 1 JUMPERED.

Turn RADIO ON with LOCK Button Pressed.

Transmitting on 33-37 MHz can damage radio.

Perform at own risk.

Pedro.

6M will allow you to work DX with 'Sporadic E', tropo-ducting, meteor
scatter and aurora (which we do not get here in the southern latitudes
of the US). There are also great hopes for the upcoming solar cycle
to enhance propogation. Expect great operating in late December to
mid-January and quite often from late spring to late summer. There
will also be other openings that seem quite 'out of the blue'.

As a tech, this band is your best chance for DX and you will find more 6M gear for sale as many newer HF rigs offer 6M and several Generals and above are selling their old stuff as they upgrade their HF stations and end up with 6M capability as a 'bonus'.

You will find yourself in a different operating environment from your local repeaters: signals can fade, sideband lacks the 'fidelity' of fm so you will need to develop good listening skills (if you listen to a lot of shortwave you have a good foundation), you may find noise sources you never knew existed due to your lower frequency and the difference between fm and sideband (by the way, both modes are used on 6M just as on 2M, though most DX work is done on sideband and cw). All of these add to the challenge of putting together your station, for me it was quite rewarding - especially when I managed to make a California to Florida QSO on AM with 20 watts!

Find a way to make it happen, I have yet to find anyone who has gotten involed in operating this band who does not have fun with it. Looking forward to hearing you on the 'Magic Band'!

4154. 9 Band Transceiver using IC-R71A?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-10 00:00:00 UTC
From: Peter Parker <parkerp@pcug.org.au>
Message-ID: <35554580.0@newshost.pcug.org.au>
Source record: 144431
Cross-posted to: rec.radio.amateur.homebrew;,rec.radio.amateur.equipment

Having just bought a used Icom R71A, the thought occurred to me that it
may be possible to add a mixer, oscillator and RF amplifiers to make it
into a CW transceiver capable of operating on all HF bands. I am aware
that this was done with valve gear many years ago.

Before I go further:

1. Has anyone actually done this with modern synthesised receivers?

2. What is the frequency coverage of the synthesiser in the R71A?
Is it forward tuning? (this information is needed to work out the
crystal frequency needed).

3. Has anybody used this idea to build a multiband SSB transceiver (maybe
using the phasing method?).

Any ideas would be appreciated.

>QRM. Here's to many more years of the CW requirement for HF!!!!!!!!!
>
>Chris "KX0Y"

Tom's post was right on, and non-controversial. HF is great, and if you have
to chew broken glass to get on, then do it. Don't wait until some sanity is
brought to licensing requirements. You'll miss the current cycle, and it
promises to be a hot one.

But Chris' post is a different matter entirely, and symptomatic of what
is wrong with the amateur culture. There are those among us who do
not find CW to be the love of our lives. And even though we may use
it on occasion, it is like chewing broken glass. Yet Chris would have
this chewing of broken glass forced upon us in perpetuity because
he loves it. What gives him the right to impose his tastes on everyone?
That's incredible arrogance.

I've got news for Chris, CW is *not* amateur radio. And while CW is
certainly primitive, it is *not* the most effective method to get through
noise and interference. And even if it were, what business is it of
yours? A tribander is better at cutting through interference than a
dipole too, but that doesn't give you the right to mandate that everyone
have a tribander before being allowed on HF. Get a grip. The world
doesn't revolve around your likes and dislikes, nor does it revolve
around mine.

Government licensing requirments need to be based on rational
regulatory purposes. Morse testing once was, but is no longer.
When amateurs and the life safety services shared spectrum,
it was necessary for them to be able to interoperate so that the
amateur station could be ordered to cease interfering with the
life safety station. Since the life safety stations only used Morse,
that required amateurs to know Morse. But we no longer share
spectrum with the life safety services, and they no longer use
Morse anyway, so the rationale for a Morse requirement is now
moot. To continue to impose a Morse test requirement because
an arrogant twerp *likes* it, is unacceptable public policy.

Actually, 6m is very much like CB, with skip shooting, footwarmers, TVI, etc.
The only difference is that all but the TVI is legal on 6m, it isn't on CB.
OTOH, 2m is *very* different from CB. It revolves around a repeater
culture which is totally absent from CB.

Source record: 144439

My biggest question about the 847 was whether or not anyone would use as primary HF rig? Temtping to have everything all together.

My initial thought was it might have been better to have left out the HF (except 10m I guess) and concentrated on building a really good vhf/uhf unit.

It sounds like a great rig. I saw one comment that its computer control was not perfect - it doesn't return the frequency it is using when queried - just the last frequency to which computer set it.

4165. SGC-2020 I received one!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-10 00:00:00 UTC
From: Tom Nicastri <tnic@IDT.NET>
Message-ID: <6j4ens$pb3@nnrp3.farm.idt.net>
Source record: 144442

Received a new SGC-2020 yesterday (after a considerable wait). So be advised I don't have much stick time on the radio (though I have donelittle besides play with it).

With less then 24 hours of use ownership - The radio exceeds my expectations all around.

My other radio is a Yaesu FT-847 with 2m, 440, 6m & HF. the 847 has all the bells and whistles. I have also used a 20 year old FT-7 and an modern FT-900 (both are HF rigs).

The 2020 comes from another train of thought - more along the lines of simplicity and efficiency. In this day of features on features... the 2020 has no menu. Its button driven. But seems to work very well. Like all radios I have owned (including the 847) you have to get used to the operating setup. But on a radio intended for desktop, portable, battery and mobil operation it all seems to work out very well. Simplicity is indeed welcome change from the geegaw festooned radios out there today! And the radio is built like a brick outhouse.

This radio is the most solidly built hunk of radio gear I have ever purchased. The outer housing is thick aluminum and looks bomb proof.

While its bent towards simplicity important features were included, not omitted. It has band pass filter, shift (and plenty more).

I have not had the radio running for hours on end so I can't say how stable it is after its been "warmed up". But I have done plenty of side by side comparisons with the 847. I have the 2020 and 847 on the same antenna with a switch.

The receive on the 2020 is darn close to the 847 (which costs 3 times the price). The 847 does have a slight advantage on very weak signals but the 2020 exceeds all my expectations by a long shot! I am reluctant to say the 847 has an advantage because I have not become accustomed using the 2020 effectively yet. The 2020 has an excellent receive.
My first contact was Spain on 20 watts using a Spiro traped dipole!

The audio output has a good sound (better than my 847)

I have found no problems or undesirable traits on the rig. Like every radio I have owned lately I thought some things were not working right only to find out I was not following the instructions correctly. Only feature I have not mastered is the "calibrate function"I will try again later when I am fresh.

The printed material in the package says the radio will output 20 watts the power setting went up to 27 watts.

The radio is very compact for portable use. My first outing will be an extended kayaktrip. But that's on hold tillwel work out the battery life for the 2020.

I am a tough critic. Well done SGC. The 2020 is done right!

Yaesu FRG-9600 VHF/UHF receiver. Covers 60-905MHz continuously and can be converted to cover 20-950 (instructions included). The unit is in excellent shape with only a few minor scratches and includes the following:

NSTC Video Board, Original copy of the service manual, extra memory battery, original box and all original factory accessories.

$ 375.00 includes shipping via UPS contact johnl@ptd.net Thanks.

Will arrive in Dayton on 5/13--can bring the 9600 with me if you advise by 5/11.

John

Okay - has anybody said this before?

What aptitudes do excellent cw operators have that other people do not? I have heard that people with MUSICAL aptitude can be good cw ops

Back in the days before electronic keyers everybody had their own distinct sending style. Many hams still had homemade gear so the signals usually sounded different as well. It was not difficult to pick out a cw station from the eastern block, for instance.. They were generally good operators with horrible raspy sounding signals.

If you were really into cw it was possible to tell if a cw operator was from stateside or DX just by the way they were sending. In some cases you could guess the actual country.

For me, it was cw that came easy. It was the technical gibberish that I had trouble with. But I wanted the ticket so bad I just memorized everything.

We've been licensed 39 years. I think I'm a pretty good cw op. We can do all kinds of sophisticated antenna work. My station is well constructed. But as far as resistors, capacitors, power supplies, logic boards and everything else goes - forget it. It ain't in the cards.

I bought the 8500 about 3 months ago for my wife's car. I went with the "normal" mic because I knew that one look at Mr. Potatohead and she would never use the thing. The display and mic are remote mounted and the only problem so far has been the contact on the remote head bracket. If you don't seat the knob side of the face with good force you can get funky results. The normal mic works the radio just fine and my wife has yet to complain about the radio. Now all I have to do is convince her to let me have one!

BTW the "800 mhz mod" makes the radio cover the band but the sensitivity sucks!

I'm looking to buy a copy of the service manual for the
UHF Uniden FMU-250K radio. I had talked to someone
who was checking the cost of getting Kinkos to copy it
but I lost his address. I'm back at square one. At minimum
I'd like to get the schematic so I might tweak up the TX
path for 440 mhz.

Thanks
Michael

NO IT DOES NOT DO 800MHz!

TX
0.1-33MHz 33-36 will key into LPF BANDSTOP! DONT DO IT!
37-76 MHz CQ 4 meters!
137-174 MHz
410-460 MHz

Have not verified power output. Meter shows output.

Pepe!

Actually, Lou ... I see no restriction in the NCI charter that limits
our goal to "English-speaking countries."

The goal is to eliminate manual Morse testing as a rquirement
for ANY amateur license ANYWHERE.

Again, this does NOT mean that we wish to eliminate or limit
the USE of Morse in any way. That is simply NOT the case.

I am sure that Dave was refering to the attitude/mentally of the users on 2m not the hardware. And I have heard it in a lot of places. 2m sounds like CB excpet for the
repeater id's.
AS to 6m the "Skip" (propagation) on 6m is not as good as CB. Being a higher fq. 6m
needs "Stronger" conditions. BUT when its OPEN !! WOW.

Personally I have an Alinco TX-70 and LOVE IT !! There is not alot of local 6m around
but I get some DX. I am using an Antron A-99 tuned to 10m with an antenna tuner on 6

Another Issue TVI IS NOT LEGAL ON ANY BAND !!! The Amateur station is not allowed to interfere with other services. And the Station operater is supposed to prevent
it.

btw they dont call them footwarmers any more. the PC term is "Kicker" <BG>

73
Tom AA1ID/5

Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

I have two newer style rigs for sale:

Azden PCS 7000-H

This is a 50W mobile 2-meter rig. It is in very nice condition.
I do not have the original box, but I do have the original manual.
It has CTCSS encode, 20 memories, DTMF microphone, scan, as well as
other functions. It is a very recent model. I have replaced both the
backlighting in the display and in the microphone. They are matching yellow,
and it looks really nice.

Azden PCS 7300-H

This is a 35W mobile 70cm rig. I do have the original box, but only a
photocopy of the manual. It is a nice rig also, but this one is almost
indistiguishable from a new one. This has the original orange backlighting in
the mic and face.

These radios are both in good condition.
I would like $200 each, or $375 for both.
I will also consider trades and combination offers.

Thanks,

Chris Buckley

univeral-radio.com has new, refurbs, and used (not refurbed) radios at
fairly good prices. Got my new YB400 for $169 a while back.

>minds are not pushed hard enough at 5 wpm (most do better at 20).

I don't know if it has anything to do with "faster brains", but you'll
certainly do better learning the character sounds as unique units
rather than having to mentally translate dots and dashes. At 5 WPM
the character sound is so dragged out that you automatically break
it up into dot and dash sounds. Then you have to do a mental lookup
to translate those into characters. That's not good. If you run the
characters at 20 WPM instead, the different character sounds are
much easier to recognize as distinct sound units.

This is the basis of all of the training programs using Farnsworth
or Koch methods. The Koch method also takes advantage of the
concept of symbol space. It teaches you the character sounds in
pairs which are separated by the maximum Hamming distance
in symbol space. This makes it easier to fix the sounds in your
mind.

A related problem is being able to transcribe what you hear.
(It isn't copy until it is on the paper.) If you are a slow writer,
this can be a terribly limiting problem. You must learn to
"copy behind", and use the time available in word spaces
to catch up your copy. An excellent way around this problem
is to copy with a keyboard. Most people can type much faster
than they can write in longhand (and write in longhand faster
than they can print).

Koch drill is a lot like the typing drills you had in typing class.
And it works very well when copying by keyboard. After enough
practice, the fingers just type what the ear hears without involving
the conscious mind. This is the ideal. Reflexes, which don't involve
the conscious mind, can respond much faster than volutional

actions.

The standard advice I give people doing Koch drill is *DON'T THINK*.
Being a modem does not involve thought. If you think, you slow down.
Just let the body do. You can read the copy later after the over to see
what was received. (It'll make much more sense at normal reading
speed anyway.)

There is still one problem, I HAVE to WANT to get on hf.

listening to 3853, 3894, 3950, 72xx, 14.313, ect
I don't particularly care to do anything around those
kinds of people. ALSO a monkey can work dx with
a ball peen hammer for an antenna during the sunspot
cycle upscale. What is the challenge?
try cw on 6 with s5 noise level
try cw on 2 with no band openings <EME>
try anything on 222 and get anyone
try cw on 432 and get noone because you have no room for antenna
arrays

anyway, what I am saying is.....IF I WANT to do cw, I will, IF (I)
want to get on HF then I will.....AND IF someone is militant about it
and throws all sorts of cheesy comments as to why I don't buckle
down and just do it, I will ask them what their best contact on 2m ssb
is, what their best contact on 6,432,222,903,1.2gig, and up

IF THAT made a whales ass to them then wooopie
sames goes for me

Come to dayton! It's callllling you!

It's friday, saturday, sunday in Dayton OH.

If you can't make it, HRO's ok :)

Are you in Anaslime? That's where I was when I got my ticket. Bought my whole initial setup from them,
nice guys, but their operating hours left a bit to be desired. Sort of assumed you'd be retired to shop there :)

I am glad you threw in "great to deal with," Stan.

I am lucky to live only 35 miles away from their Anaheim, CA store. Although I am by no means a wealthy individual, I usually do not place "PRICE" at the top of my list of requirements to make a purchasing decision.

"Customer service" is what I am looking for. Not the "tech support" type necessarily - but I want to know that if I have problem with a purchase, I will be "taken care of" by the dealer.

HRO has yet to disappoint me.

Five or ten bucks saved by purchasing mail order on a $300.00 piece of equipment doesn't do much for me - when I can deal with Janet, Bruno, Dale, Terry, and the rest of the gang at HRO - Anaheim. Whose prices are "right there" anway most of the time!

Folks,

In February, I sent my TMC GPR-90's power transformer off to Joe Russo at ACR Electronics (17 Joice St., Lynn MA 01902 781.598.5908) to have the B+ winding repaired. Joe spoke to us on the phone and assured us that there would be no problems, and that the transformer would be as-new when he returned it.

Joe returned the transformer within the time promised. It was completely rewound (every winding), and all of the wires were covered with original-color spaghetti (looks like no soldering done inside). The voltages are spot on, and there is no obvious extra heat being produced (may actually be a tad cooler).

I highly recommend Joe's work, and he will have all of my transformer business in the future.

is it true or not? Does the FT847 offer transmit on 70MHz?
(yes, MHz, not cm) or not?

I saw a note on http://www.radiosales.demon.co.uk/index.html that the UK version offers 70MHz. As I don't believe in any special version of the radio despite those dedicated to the japanese low-power restricted licences, I state that either each radio can do this or none.

Can anyone supply more details?

Thanks a lot in advance!

I have had many encounters with HRO and all were excellent. If price is your only concern then you probably can find it cheaper elsewhere. Most of the time I place GOOD CUSTOMER SERVICE above all else. Paying a little more but getting treated like a human being is far more important to me. Enough of the soap box stuff. You won't be disappointed y HRO. Now go out and buy that rig!

I have been shopping at HRO for about 20 years... The main reason is to support a local business. I have had good luck with the Oakland store...but....every time I go to the Sunnyvale store I get into an argument.... They play with the prices.....know your prices before you go there... check there page for sales & coupons before you call! The Sunnyvale people act like used car salesman.....This problem seems to be mostly at one location....

I have had one of the circuit board foils break on the "daughter
board" the filter is soldered to. You can remove the filter from the
radio & use an ohmmeter to check for continuity between the filter
pins and the appropriate pins on the connector.

IMHO if the problem is anything other than a broken connection, it's
probably impossible to repair in the field.

Frank,

Keep in mind that if you should decide to purchase a vert as the Cush R7 or any of the 'electrical half-wave length no radial antennas':

The antenna will 'TUNE' to an acceptable SWR without radials.

The radiation efficiency will be PITIFUL without radials and takeoff angles will be higher than advertised.

The 'gain' of a 1/2 or 5/8 vertical on the HF bands is not realized unless and EXTENSIVE radial system is employed coupled with better than normal ground conditions out to 10s of wavelengths.

The 'gain' of a 1/2 or 5/8 wave vertical will be LESS that the 'gain' of a 1/4 wave vertical unless the above conditions are met.

If you truly need the mutiband operation, and have limited horizontal and vertical space a quarter-wave trapped vertical with radials is your best bet.

If you are going to a dipole or trapped dipole, and you would like to work some DX, you should be at least 1/4 wave high at the lowest frequency of interest.

A great newsgroup to search for ant info is rec.radio.amateur.antenna

And remember that no antennas possess magic properties that suspend physical science.

Read some of the ARRL or independent books published on antenna theory and practical design.

Read 'Low Band Dxing' published by the ARRL.

Don't believe anything that I, or anyone else, have said unless you research it for yourself.

Hi all,

Finally it has arrived in this part of the world.
Saw one at our local dealer. It's small. (and black)
Although my hands are really 'Japanese sized' I had
trouble operating the pushbuttons at the right side of
the main tuning dial.

I can't agree with comments stating the blower is noisy.
I didn't even realize that it was running. The set has
two blowers the one just behind the front seems to run only
during TX.. Is this the noisy one or has Yaesu improved
the blowers before shipping to Europe ?

Audio sounds very clean, but I think the MF filters are a
bit to wide at the bottom for serious HF stuff.

Volume control is strange : it has a jump start ; the first step of
the digital level is already more then just very quiet.
But that's not all : Turning up the backlighting of the display also
increases the audio level (or was it just noise-level ? that would be bad)
Is this intentional ?

Could one of the proud owners tell us a bit more about the MENU items ?
Any spurious on downlink frequencies while running max power to the uplink ?

My FT736 does !

Do you ever wonder why metropolitan police, fire, and EMS agencies use UHF while rural agencies use VHF? UHF indeed works better in built-up areas, but the range suffers. VHF works well under unobstructed LOS conditions. This is also why the military prefers HF for field work.

Emil,

Please clarify "Radials". The "Cush R7" - in my case the "R5" have a
rather annoying set of four
short "rods" at the base. Since these "rods" don't measure out to anywhere near the
advertised operating
frequencies for the Cushcraft product of 14 ,1 8, 21, 24 or 28 MHz, I question their
function and purpose. I believe that Cushcraft describes these incompatibly resonant
"rods" as "Radials". If these "rods" are designed in by Cushcraft for purely
aesthetic purposes, I won't be suprised!

I'll admit to having owned several (as in too many) Cushcraft products in the past.
All were eventually replaced by other types and brands with overall improved
performance and quality.

Thanks in advance,

Scott KD6CQ

Converting my TH-79 to 420-450 was as easy as removing a plastic plug on
the side of the case, clipping a green wire which was then exposed and
resetting the CPU.

Mixed mode refers to narrow band modes, like CW and SSB and weak signal is
typically DX and moonbounce using these modes.

Running FM in those ranges might make you very unpopular with your fellow
hams.

Propagation is not as good on 70cm (440) as on 2m. Voice quality however sounds better when somone is in range.

In my case its nice to have an additional band. There are many many 70cm repeaters in my area (New Jersey). You can usually find a quiet repeater on 70cm and have a conversation without other people jumping in and busting up you QSO with requests for signal reports etc. Some impolite amateurs think nothing of derailing the train of thought.

Also the 2 meter simplex freqs are pretty crowded in my area. 440 gives additional simplex freqs that are less busy.

I think a second band is well worth the extra cost if you can afford it. Especially if you travel or those you talk to have 70cm. The proliferation of dual band, tri band and more band radios supports that view.

Scott,

I used radials in the context of wires 1/4 wave long or longer, laying on the ground or buried several inches deep. The more the better. 16 to 24 are good. 2 or 4 are much better than none. Commercial AM stations have up to 120 radials per FCC regs.

4243. ICOM IC-T8E restoring wideband receive after CPU reset

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-11 00:00:00 UTC
From: Nick Lansley <usenet@lansley.demon.co.uk.nospam>
Message-ID: <894900571.3483.0.nnrp-06.c2de030e@news.demon.co.uk>
Source record: 144265
Cross-posted to: alt.radio.amateur,rec.radio.amateur.equipment,uk.radio.amateur

I've just become the proud owner of the new 6/2/70 triple-band handheld ICOM IC-T8E, which initially had full wide-band receive (50 - 999 MHz FM with Airband AM).

However, when I followed the manual's instructions to perform a full CPU reset before first use (which for me was second use but hey let's not beat about the bush here!), the radio lost all it's wideband capability, restricting me strictly to the three amateur bands.

The manual gives no clue as to what to do to restore wideband receive, so if you buy this model and follow the instructions, wideband receive capability will be brief! However, those good people at Martin Lynch (from whom I bought the radio) took me through the secret combination-key-press to restore wideband receive, so I pass this message on to help any new owner:

With the radio off, press and hold down the BAND and SQL buttons simultaneously, then press the PWR button to turn on the radio. Keep the BAND and SQL buttons down, and you will see the radio perform an LCD display test (turning on all its LCD elements one by one). Let go of the buttons, and you now have wideband receive.

I'm intrigued to know what other combinations of holding down buttons and turning the power on will achieve - I'll let you know...

Best regards
Nick Lansley G1KZI

I have searched the web for instructions on converting GE Exec II radios to full duplex operation and found several sources, but I am not sure I understand things completely. All of the instructions I have seen talk about how to enable the receiver permanently and how to add an additional RF input for the receiver.

However as I see it, the GE radio has a common RF oscillator for the transmitter and the receiver's first mixer. If the radio transmits some voice band signal, then this signal will get back to the receiver through the 1st mixer.

Am I missing something obvious here?

Tks for every one's help,

Alan+

4246. Info needed: Panasonic RF-200 Antenna Replacement

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-11 00:00:00 UTC
From: Paul Christensen <paulc@mediaone.net>
Message-ID: <fhF51.2912$uS6.7412352@news1.jacksonville.net>
Source record: 144268

I am in need of a replacement telescoping antenna for my ca. 1975 Panasonic RF-2200 shortwave receiver. A call in to Panasonic's parts department revealed that it's long been a discontinued item. Does anyone know of a Panasonic parts aftermarket that might carry a suitable replacement? I know there are many different replacement antennas at Radio Shack, and the like, but I would like something that fits and mounts perfectly in its place. Thanks!

-Paul

4247. Yaesu 8500 Questions...

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-11 00:00:00 UTC
From: Chris Buckley <cwbuckle@mtu.edu>
Message-ID: <35571E52.F058D64E@mtu.edu>
Source record: 144269

Ok, maybe I'm just a little silly, and haven't read the manual enough times, but I can't seem to find a way to control the volume of, or remove alltogether, the beeping that comes with every press of a button.

I know this is supposed to be a "by feel" radio, and I do appreciate the different tone combo's for different functions (must be great for the blind, after the radio is programed) but enough is enough!

And one other thing... Has anyone done the 800-996Mhz receive mod? Mine doesn't seem to pick up signals that register as S9 on my HT..... I knew the RX would be bad, but I didn't think it would be impossible. Maybe it's time for another reset....

Thanks,

Chris

Good post and good answers from Gary. I am in total agreement.

Now a discreet plug for my web site...
DOWNLOAD SUPERMORSE 4.16 NOW! ALSO NEW HAM INFO!
http://members.aol.com/rcrusoe/ab5vh.index.html

We will now return to our regularly scheduled programming.

Whatever code tutor program you use, consider recording the output onto microcasettes for listening while you are away from the computer. Change the tape every couple of days so you don't memorize. Always at least make writing motions with your fingers, even when you can't actually put pencil to paper. "Virtual writing" is better than nothing. It is well and good to be able to copy conversationally in your head, but obviously that has it's drawbacks on the exam! Train your hand and ear to work together. If you ever do any formal message handling, you will also need the ability to get it all down correctly on paper.

Skipping the 5 WPM standard timing stage of learning has become the de facto standard for learning the code. I believe practically anybody benefits from skipping over both lower speeds altogether, but 5 WPM is less intimidating at first glance, and useful to those who want on HF but are really not interested in CW at all, only on passing a test. Even the ARRL uses Farnsworth code, withh 18 WPM characters sent on the 5 WPM tapes and exam. Not much difference between 18 and 20, if you ask me, so you may as well learn to recognize the characters at 20, beginning with the characters widely spaced, Farnsworth style. You do far less thinking and far more understanding and copying at that character speed.

Always set the word speed, i.e. the actual throughput speed, at a level higher than you can copy. When you are getting better than 90% copy, it is time to bump it up a bit. Check with the VE team where you will be testing, but standard practice is to give a multiple choice test, with the answers to the questions found in the text of the Morse Code sent. 100 % copy is not your goal... passing the exam is. Very few VEs will insist on you passing "the hard way", by getting a minute of perfect copy. Perfect accuracy can come later.

DO practice with the simulated QSO format that will probably be used on the test, the last few days before the exam. Also, get used to recognizing antenna types, name brands, Q signals, and practice heavily on callsigns. The transition between letters and numbers and back throws a lot of people. with the multiple choice test, at least one question answer will be the callsign of the called station, or the calling station, and quite likely the other will also be a question. This is great practice for on the air operating too, as a lot of hams are so used to sending their own call that they fire it out there at a speed that ought to be expressed in rounds per minute rather than words

per minute. Getting a call right the first time is a sign of a good op.

Recognizing common words and names will help a lot on the test. for instance, you hear C U S H... and right away write "CUSHCRAFT", get caught up, aand rest for a second, ready to burn up the paper again on the next word, likely a model number. ANT IS DI... is all you need to hear to write DIPOLE. Then expect to hear "UP XX FEET"... listen out for those numbers.

There is no requirement to print in block caps... one interesting technique to try when you have mastered copying behind is to write cursive in all lower case. Amazing how much faster this is, when you reach the point where your writing speed becomes the limiting factor, usually at 20 or above. Also, on the exam or during casual QSO, the only person who needs to understand your chicken scratching is YOU. I never printed the letter "E"... they zip by so fast, and there are so many of them, that I just put a dot a half space up from the line, i.e. higher up so as not to mistake it for a period. A check mark is good for a missed character. You can use a dash for the missed character on the test, as I don't think the dash is one of the required punctuation marks (for your info, it is dahdidididididah, one more internal dit than BT). Anything to get your speed up.

Morse tutor programs are getting better and better, but I still like good old Supermorse by WD5CID. Lots of features, very customizeable, it is shareware (one of the few I have ever registered and paid for voluntarily) and not crippled or timered, and runs great under W95, and pretty decent undeer 3.1. It is a native DOS app, very timer dependent, so twiddling with the PIF file is needed for 3.1, usually. No sweat at all under 95, though. Just run it. Setup is a bit involved... you must select the timing method and then calibrate it, which takes a few minutes. No biggie, though. You can even use it to key your rig. My keying interface is nothing but a 2N2222A soldered into a DB 9 connector. Yeah, they "go away" when I have too much RF on the key line through poor setup or operating practices, but they are cheap, and I never trashed a computer yet doing this. You can go modem to modem too, for practicing with a friend over the phone line. Nice prog, and you can download it at my site. There is also a link to a GREAT site for new CW-ists.

Hope this helps.

4249. Wanted to swap for HF rig

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-11 00:00:00 UTC
From: Dwight W9YQ <dgbcms@netnet.net>
Message-ID: <355721E5.B9DAB4D5@netnet.net>
Source record: 144271

I've just acquired a several pieces of ham equipment from an estate.

I'm interested in making a simple swap for a HF transceiver and/or HF amplifier
in good condition. No money nor dollars need be involved, I'm willing to meet
1/2-way, within a day or so of travel from Northeastern Wisconsin (near Green
Bay), depending on the offer.

Make me an offer! What have you got? Will take the first reasonable offer
received for the lot, cash or rig!

Swan HF-700S SS-16B 3.5-28Mhz, 1979 vintage, tube type transceiver with
PSU-3A power supply and manual, cosmetically mint, receives great, output
is low on transmit.

Heathkit HR-10B receiver with manual, cosmetically mint, seems to work

Heathkit SB-300 receiver, has the (3) filters, cosmetically mint, seems work,
with manual, no power cord

Heathkit SB-400 transmitter, with manual, cosmetically mint, lights up, haven't
tested transmit as it don't have the cables needed for inter-connection to the
SB-300 for tranceiving, also no power cord

Heathkit HD-1416 Code Practice Oscillator, no manual, works

Ramsey E-Z Key CMOS CW Keyer Model no. CW-7 with manual and matching
case, works

Ramsey FHT-1 Fox-Hunt, 2 Meter, 5W Transmitter, no case, 80% assembled,
no manual

Ramsey AA-7 All Band HF, VHF, UHF Active Antenna, assembled, manual, no
case

Ramsey 40 meter QRP, HR-40, all mode receiver, assembled, manual, matching
Case and Knob Set, works

Ramsey 40 meter, QRP-40, 1 watt, CW Transmitter, assembled, with manual
and Matching Case and Knob Set

Swan SWR-1A SWR/Watt meter 100W,3.5 to 150 Mhz at 1000 watts

Radio Shack Digital SWR/Power Meter, rated at 2000 watts, Cat. 21-257

Radio Shack SWR/Power Meter, rated at 2000 watts, Cat. 21-524

Zoom 28K Internal Fax Modem and a 14.4 Fax/Voice Internal Modem

June 1992 Sam Amateur Data base on 3-1/2 disks

Several QRZ CD-ROM's, Jan 1996 vol. 6, QRZ CD-ROM Dec 1996 vol. 8,
QRZ CD-ROM Apr 1997, vol. 9 call sign database

Hustler Mobile Ant System includes MO-1 fold over mast, standard
resonators for 80, 40, 15, and 10 meters, SSM-3 Stainless Spring,
VP-1 Tri-band Adapter, working condition

Carolina Bug Katcher 10 through 40 meters with IM-1 Inducti-Match
with docs, working condition

Butternut HF6V vertical 80, 40, 30, 20, 15, 10m with docs, in working
condition

Pro-Am HF Mobile antenna for 40 meters PHF-40 (similar to a Hamstick)

Either e-mail me or call at 906-826-7422.

PCR 1000 software runs under Windows 95, and requires at least 486 66 MHz, but I'd recommend a Pentium. PC controlling the receiver should not cause any RFI. DSP card (UT-106) is only an option, and number of memory channels is limited only by your PC's hard drive space. Main oscillator and BFOs are very stable, therefore providing a good SSB reception.

Yes, that's how you get wide band receive mode. It is not a "mod", and it is certainly not a secret!

4253. Comments: Kenwood TH-79A(D) and ICOM IC-W32A HTs

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-11 00:00:00 UTC
From: mcravit@best.com
Message-ID: <6j8hao$8tu$1@shell3.ba.best.com>
Source record: 144275

I'm planning to purchase a new 2M/440 HT this weekend, and have pretty much narrowed things down to either the Kenwood TH-79A(D) or the ICOM IC-W32A HTs. I'm currently leaning towards the Kenwood, but I'd like to hear from people who have used either (or both) of these HTs. Which of the two would most likely be a better choice? Are there other HTs I should give a more serious look at?

I mostly do repeater and public service kinds of things, so the following are most important to me:

- durability
- cross-band receive
- cross-band repeat (I use this infrequently, but it's helped me more than once)
- battery life
- CTCSS squelch/CTCSS paging

Since I like experimenting, other 'interesting' features would be nice as well. Oh, and wide-band receive would be nice (either factory or via a mod) but is not really required. Price is not an issue as long as it's not too far out of the ballpark of what these two rigs cost (which seems, from the HRO catalog, to be about $350).

Comments/suggestions, anyone?

E-Mail replies preferred and I'll summarize and report on my purchase decision to the group, if anyone's interested.

TIA, and 73,
/MC

Source record: 144276

Roberto,

I haven't done a side-by-side comparison, but I *have* tried the best DSPs (JPS NIR-12 and Danmike DSP-NIR) with several HF rigs. I also had a chance to try the Yaesy 920 with a built-in DSP and an MFJ DSP. In my opinion, the IC-746 is the best.

In all fairness, the comparison was done on different days, so it can hardly be called scientific. However, on none of the days did 20 m have great signals, so I mainly compared noise reduction capabilities. The IC-746 does a great job on noise reductions while introducing very little distortion.

I am curious if anyone on the list have tries the rig with Pactor.

Not that I would recommend this approach, but a friend of mine spent some time in prison as the result of some poor choices and learned code rather fast. This after years of trying with no success for Ham applications.

HI to reset the radio you need to hold down the nessary keys while turning the power on. this require an extra effort to protect from acidental reset.

Hi Tom, I can't offer you much advice on this but just FYI, I had the
same problem with a KAM and the TS-440SAT. It's been a while ago
and I dont' remember if I fixed it or not. Maybe the audio inputs
on the DIN somehow interact with the mike audio in some way (loading,
etc?)

don't have a cable, but you may not need one. I modified on of the
"commercial" versions of the ft23, slightly different number, the fth-2006,
to be programmed from the keyboard, making it a freely progammable ft23 with
complete 140-200 mhz tx-coverage! yaesu has the missing keys of the ft-23
keypad hidden under a peace of plastic.
Just soldering one jumper #9, and some mechanical stuff to reveal the hidden
keypad keys did the trick!
If you want more information, let me know.

Hello I am having a problem with my hf tran's it is an older Kenwwod ts 180's.I would like to share this problem with yourselves,and I would appreciate any input anyone may have about my trouble.I understand its an older rig,but it's very clean and this is the first problem I have had with it.

Here are the symptoms.
frequency readout digits deviate by about 2-3 hertz during tx on phone,other than 10m & 15m,It is stable on those bands!.

in CW mode frequency readout goes up about 8 herts,from display readout during keying!.

phone TX is stable when tested with a dummy load but the cw side still acts up,I have eliminated grounding,power supply ,antenna,key,mic,ant & tuner as part of my problem.I would appreciate any input anyone may have on this one,and I would like to thank all in advance for taking the time to read this request,73 de Charlie VA3IRL.

Message-ID: <6j5v3v$o6a@bgtnsc03.worldnet.att.net>
Source record: 144369

Well...

First off Yaesu FT-50RD is a great radio.. I have had one in the past. It is very dourable, battery life is not bad. Has many many nice features.. the only thing I dont like is that it is very complicated to opperate. But a little reading of the manual will help. Probably my first choice...

Kenwood TH-G71A
I have this current radio. I am very pleased with this radio. But lacks some realy useful features such as Battery Indicator and split band operation. Sound quality is one of the best I have heard and it will transmit up to 6 watts with a dc adaptor (that is not supplied). Probably my 3rd choice.

ICOM well the model that I have played with and is my second choice only because it is not as dourable as the FT-50 is the IC-w32A. This has all the features that you will want in a radio down to a backlit display. And that is very usfull when your in dark places. Sound quality is good but I dont think as good as the 50 or g71 but with an external mic it is superb.

Also... I do not recommend you purchasing a used radio... unless you are getting it from someone you can trust. Reason is that most operators open up their radios and do modifications. For some radios there are no side affects for others you do not know until you purchase the radio. If you have any more questions please feel free to ask.

Ah.... Amateur Radio at it's BEST! NOT! You know what? You ALL (and
I'm not just pointing at K1IOK) and saying this to ALL the of the
"So-Called" Amateur Radio Operators involved in this Whole Mess, You
ALL Make me WANNA PUKE! You're ALL Grown Men, Old enough to be MY
FATHER, and you ALL are acting like a bunch of 12 Year old KIDS! and
you're supposed to be AMATEUR RADIO OPERATORS and you know what, I've
seen more MATURE CB'ers in the NG REC.RADIO.CB, then I've EVER Seen in
this damn NG, Please DO me and ALL the OTHER People in the NEWSGROUP,
GROW THE FUCK UP, PLEASE! and QUIT ACTING LIKE A BUNCH OF 2 YEAR OLD
CB'ERS!!!!!!!!!! When I got my Ham Ticket, I THOUGHT I was getting
into a HOBBY That was a BIT more Regulated, and Controlled and MAYBE,
JUST MAYBE a BIT MORE CIVILIZED! But so FAR, YOU FUCKING MORONS, AND
YOU KNOW WHO YOU ARE, WITH YOUR WEB SITES PUTTING DOWN ONE ANOTHER ALL
TO PROMOTE THE STINKING B.A.R.F. WHICH IN ALL REALITY IS TO MAKE HARB
A BIT MORE RICHER... Now, I'm not on ANYONES Side on this issue, I'm
just sick and tired of reading this STUPID BULLSHIT here on the
Internet, day in and day OUT, PLEASE, IF YOU ASSHOLES, IDIOT
MOTHERFUCKERS WANNA FIGHT, DO IT ON 75 METERS, AND KEEP IT OUT OF
THE NEWSGROUPS!!! PLEASE!!!! I HERE IN MICHIGAN, COULD GIVE A FLYING
FUCK ABOUT WHO'S FUCKING SCREWING WHO'S MOTHER ON 75 METERS OR WHO'S
THE LATEST PUBLIC ENEMY #1 ON 75 METER, I DON'T CARE AND i DON'T THINK
ANYONE ELSE DOES EITHER GUYS...

My Point?

GROW THE FUCK UP!

and act your age too!!

73's

Charles Adkins

Looking for a used Ringo Ranger 2 or similar 2 meter base antenna for my cabin up north. Would like like something around 6 DB gain or more reasonably priced. Have a couple of 2 meter synthesized HT's that I may consider swapping one of them for the right antenna. Also have a 5 band trap vertical HF I would consider swapping. Will also purchase outright so let me know what you have via email please.

Hi Tom,

Sounds familiar, I too had a bad coupled noise problem that may be related to what you are hearing. After several attempts using ferrites, filters, etc., an isolation transformer (1:1 inexpensive Radio Shack type) in the speaker/output audio or mic/input audio or both. I found this solved the problem for me. Hope it helps you.

I have had the Icom IC706 since just after Christmas 1997. The 2 metre sensitivity is very good. I compared it to my Kenwood TR751 with gasfet front end, and found the IC706 was better by a couple of dB or so. This is obviously due to the lower noise figure on the IC706. As well as being slightly more sensitive, the dsp, twin passband tuning and superior i.f. performance make the IC706 a joy to use on weak signal working.

Roger.

4294. IC-746 vs (TS850S+DSP)

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-11 00:00:00 UTC
From: nospam-rmander@4net.it
Message-ID: <355a4a1f.867659@news.interbusiness.it>
Source record: 144390

I own a TS850S and I was happy before I heard the new IC-746 with the
DSP on at the ham shop.I was so impressed by the DSP performance that
I decided that I definitely can't go on without it.
Now the question is : trade the Kenwood and buy the ICOM or keeping it
and providing it with an external DSP filter (DSP100 or MFJ or
whatever) ? In this case would the performance be comparable with
those of the IC746 ?
Any comment would be appreciated.Thanks in advance.

Alan,
Only the 800 Mhz. Exec II uses the common oscillator. If you want to
make a repeater out of this one you will need two radios.

Actually drill into the tube and directly connect. That will be the only way to guarantee a solution.

I've got to jump in with my 2 cents worth here. I'm not going to even comment on whether morse is good, bad, or indifferent; I just know that it's required if you want to work the HF bands. It's how you pay your dues.

I got my Novice ticket in 1967, and my Tech in 68. Back then the Novice was only good for a year, and was non-renewable, so if you didn't upgrade you were out of the game.

I stayed on VHF, and didn't think anymore about CW until 1977 when I was goaded into upgrading my ticket by my boss. He was a little runty guy who liked making life miserable for largish oafs like myself, and since he was Extra Class and I was a mere Tech, I never heard the end of it. So finally, I dug out the books, brushed up on rules, regs, and theory, and started working on my CW speed. At that time I didn't use the Farnsworth method, just listened to actual QSO's until I was good enough to copy 15 WPM. So I went down to the FCC, took the exams, and came out with a new Advanced ticket, which pretty well shut him up.

The point to this story is that when you have adequate incentive, whether internally generated, or some external force, you CAN master the code well enough to pass the tests.

There is a very interesting PS to this story. After earning the Advanced ticket, I inadvertently let it lapse after ten years or so. Recently the bug bit me again, and I decided to get my ticket back again. The liscensing levels had changed substantially since my time, so I decided that Tech Plus would be plenty good for me. I bought the ARRL study guide, and downloaded a copy of SuperMorse, and got to work.

Two weeks later, which was last Saturday, I went to the local VE and took exams. Not only did I get the Tech Plus, I also passed the 13 WPM code test and the General written exams to boot! The most interesting thing about all this is that I haven't listened to any CW in over ten years except for the SuperMorse sessions, about an hour in total time,

and had absolutely no trouble with 13 WPM.

The key to the quick regaining of my CW skills was that I used the Farnsworth timing, listening to the characters at 20 WPM. When I took the actual exam, it seemed so slow that I actually thought that they had made a mistake and put on the wrong tape!

The upshot of all this is that using the Farnsworth method, and starting with the character speed set at no less than 20 WPM, anyone can learn the code in a couple of months and walk in and pass the 13 WPM exam. Again, it all has to do with the degree of motivation you have.

Well, I intended to only spend 2 cents but have prattled considerably longer, so my parting advice is that if you REALLY want on HF, then nobody can stop you, not even the CW examiner.

Next stop, Extra Class!

Hi, all-

I just took a look at the ICOM PCR1000 PC Radio (external)
module. It's construction appears to be very good, and the specs
were very impressive.

Does anyone have one of these currently in use?

- What are it's caveats/pitfalls?
- Is $450 (new) a right price?
- Can it run on a 286, or does it need a 386 or better platform
for software compatibility?
- Does the PC create terrible RFI?
- Is the channel memory limited (nothing in documentation)?
- Is the DSP a necessary option?
- How's the SSB reception and stability?

What else did I forget to ask?

TIA-

Look at HRO's Home page. It shows the spec's and the answer is YES.

Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchor,rec.radio.amateur.equipment

FS: Lots of Drake stuff at Dayton Flea #2942. Partial list:

- One R4C, loaded with Sherwood mods, superb contest receiver - Two or three R4Cs in different states of working order - Two MS-4s - One T4XC, good output, needs going over - One AC-4, good shape, late SN - About 25 TL442CN ICs, the RARE IC used in the Sherwood product detector mod - LOTS of NOS tubes for the R4C and T4XC, mostly Sylvania, lots of 6EJ7s, 6HS6s, some used 6JB6s - Various brackets, knobs, floor sweepings, etc.

Would like to sell as a package, will split off R4C with Sherwood mods. If interested, Email for pre-public offering

Alan, N3BJ

4308. 70 Mhz Band?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-11 00:00:00 UTC
From: Chris Buckley <cwbuckle@mtu.edu>
Message-ID: <3557785B.F2A12A07@mtu.edu>
Source record: 144404

Did I miss something?

I saw a post a couple weeks ago about somebody contesting on 70 Mhz, but I wrote it off as a typo.. Now I see stuff about FT-847 mods for 70 Mhz... Is this a non-US ham band? Is it a non-ham band? Or is it a little used ham band that I, for some reason, don't see on my charts?

If I'm missing something big here, does anyone have a URL of the *complete* list of allocations?

4309. ICOM W32A Interface

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-11 00:00:00 UTC
From: "David M. Hitchner" <NoOne@NoWhere.net>
Message-ID: <6j7uec$nms@bgtnsc01.worldnet.att.net>
Source record: 144405

From: cslc82@email.mot.com
Message-ID: <6j814g$eif@bgtnsc03.worldnet.att.net>
Source record: 144408

I have several VHF/UHF rated Polyphasers (two ISB50HNC2 and two ISB50LNC2) which I want to use @ 1.5KW 1.7-28 MHz. I contacted Polyphaser and they said the units I have aren't spec'd for the freq/power I want. Both are moderate-to-mid power, starting at around 150 MHz, with power rating higher at lower freqs.

I thought they were all a gas discharge tube inside a feed-thru. What makes them freq/power sensitive? I would prefer not to buy new ones just to use at HF.

Has anyone ever used them outisde their rated specs?

I am currently using only a 6BTV and have worked lots of DX and locals
on CW, AM and ssb(nasty word to an AM'er). I've had it for 12 years and
have never had a problem with it. Naturally, with verticals, one of the
drawbacks is not being able to reduce unwanted signals since it has
basically an omni-directional pattern. But...it works fine for casual
use. Good luck.

Just a tip from local source. If anybody wants to throw working old microwave oven your way because upgrading to a new larger one, the power xformer used in the MW's makes a great Xformer for use in building your own power supply. Its usually rated about 2000 VAC more or less at heavy current.

Priority scan punches a hole in the audio as the receiver leaves the
non-priority freq to check the priority freq. If you punch a hole large
enough to detect PL/DPL (200-300 ms) most users would find the degredation
of non-priority audio unacceptable. This is why you don't often see PL/DPL
used with priority scan.

47A doesn't have a tone (CTCSS) board, CTCSS encode is built into the radio. You may think it doesn't work because tones can only be turned on in duplex mode.

Yes, I remember some of that vintage, but the unusual thing was a female octal socket served as a multiple FT-243 Crystal sockets.

73,
Art

I have a friend who has a 40 meter amateur radio rig in his '98 Blazer. Every times he modulates the signal the all the dash lights come on, go off, and the engine stalls. Obviously RF is getting into the computer. He has routed the battery leads and coax on the left side into the frame where possible. Any ideas I can pass along?

Icom R-10 is CI-V capable, but none of our handheld transceivers are. Do you have CT-17 level converter, or did you build one? Just curious.

Adnan, Icom America

>
>I thought they were all a gas discharge tube inside a feed-thru. What
>makes them freq/power sensitive? I would prefer not to buy new ones
>just to use at HF.

The difference is the firing potential of the gas tubes. The firing
potential is selected so that it is as low as possible, to maximize
protection, while being high enough not to fire during a normal
transmission. Therefore they are rated for specific power levels.

E=sqrt(P*R) Since the line impedance is fixed at 50 ohms, E
varies with the square root of power applied. The gas tubes
used are adjusted for firing potential by varying the gas mixture
used in their manufacture. Polyphaser has gas tubes with
firing thresholds designed to accomodate a number of different
power levels. You have to use the right one.

If you try to use a suppressor with a too low power rating, it
will fire on transmission peaks. That's *very* undesirable.
If it doesn't kill your transmitter, at the very least it will cause
severe flattopping of your signal and make you *very*
unpopular on the air.

Polyphaser suppressors are also DC blocked by a capacitor.
This improves their firing response if they are attached to a
low impedance load (such as a cavity). But it also means that
they are frequency sensitive since the capacitance used has
to be chosen to be a sufficiently low reactance at the frequency
of operation while still not being such a large capacitance that
it will exhibit significant energy storage during a strike event.
Thus a VHF/UHF suppressor will have a capacitor which will
be too low a value to properly couple through HF energy.

Poly does this to give you the maximum protection possible
for a given set of operating conditions. Other manufacturers
don't take these extra steps, and the protection they offer
is less. If you want one suppressor that works on any frequency
at any power level, then you have to accept a much lesser
level of protection.

You can open up the transmit on all frequencies from 1.8 to 30 MHz.
This involves opening the radio, sliding open the front panel,
jumpering and pressing a few buttons while turning the radio on. I
don't have the mod handy at work, but if you e-mail me, I'll send you
a copy.

Mine works very well on all bands from 440 MHz to 40 meters. It's a little weak on 2 meters above 147 MHz (it doesn't match too well). I have mine on a quad foot mag mount on top of my Ford Expedition. There's another fellow on the group who has had trouble with his though. I think it's a great mobile antenna. I chatted with a few guys in California on 40 meters (from Michigan) last night. They all gave me good reports.

well, you can take my experience with a grain of salt, I am new to this game.

I have an mfj1798. It's still on the ground, only about 12 feet from my house, on the north side of the house. on a 10-foot pole. So I have significant blockage from my aluminum-sided house. Rig is a TS570s.

On 25-100 watts I have worked people in los angeles (10M phone), SLC Utah (phone), Va. (80M phone), Ma. (80M cw), and other places. I was surprised because I didn't expect to get very far with my lousy location (it's going on the chimney soon, once other work gets done, ha ha, maybe 1999).

Hope this helps somewhat.

Hi,

I just bought a 2nd hand AEA DSP 232 Terminal Unit. I was also given a copy of Pakratt for Windows but this does not have the DSP 232 in the list of available TNCs. I have managed to use it okay though!

Is there any software for Win95 that would be more suitable and utilies the features of the TU.

Thanks

John

Tektronix 492 Spectrum Analyzer For Sale Best Offer Over $4000.00

A high performance, rugged instrument of compact size, with microprocessor logic control. Covers the wide 50 khz to 21 Ghz center frequency range. Simple 3 knob operation with on screen CRT readout of parameter settings. Readout resolution within 1 MHz. Frequency Span: 10khz to 500 MHz/div in 1-2-5 sequence. Sweep times 20 us to 5 S/div (10 S/div in Auto). 80 dB dynamic display range with down to -115 dB sensitivity. Relative level measurement capabilities of 0.25 dB, 1 dB, and 10 dB in LOG mode, plus 1 dB equivalent increments in LIN mode. Options included are: 01 - Calibrated Internal Pre-selection, filtering of input to first mixer for each frequency band; 02 - Digital Storage with Save A, maximum hold, B - save A, display averaging and storage bypass.

Unit is in very good condition.

COD Cash Only, Visa, MC, Discover or by prepaid check with shipment made after check clears.

I am looking to buy a Network Analyser with an all S parameter test set.

I need coverage below 455 kHz as this will be used for dual conversion receiver development and upper coverage to 1GHz minimum, preferably till 2-3 GHz. Was considering HP8505+HP8503+HP8501 but it only goes down to 500kHz on the low end.

One possibility that has been suggested to me is HP8754 + HP8748 S parameter set set which has coverage from 4MHz to 1.3 GHz or with option H-26 to 2.6GHz and then get another unit for the low end coverage.

An HP8753A with the S parameter test set would be ideal since it has coverage from 300kHz-3GHz but unfortunately they seem to be very expensive for now.

I am open to suggestions, pls email offers,

Alan+

Source record: 144189

I have the Alpha Delta DXCC and am buying another one just like it... They are very good antennas, I paid $ 119.00 for mine and it was easy to put the spreaders on ....(some assembly required)
It has very good swr accross every band except the 75 meter band... you have to tune it pretty close to where you normaly talk there... No power limitations,, no tuner needed except if you go very far up and down the 75 meter band from where you have it tuned... Very well made also...

Hi Gang,

I Need a dial for a HW-7. If you have a scanner and can scan it in that would be great.. if not a fax of the dial plate will suffice. I'm going to make a new one (writing on my old one is worn off for the most part), so I need a reasonably clean original to work from.

Now available for the first time a Motorola Keynote pager with monitor. We take a reconditioned Keynote pager add our unique monitor adaptor and turn it into a functionally equivalent of a Minitor II pager in the monitor mode. The pager can be switched from monitor to non monitor mode. Available options Vibrator, Voice Storage, chargers, and extended warranty. The price varies depending on the options you need so go to our web site for all the prices, $135 to $170 each.

Over 1,000 pagers in stock, all bands available - low band(32MHz to 46 MHz), VHF, UHF, and 900 MHz

What Motorola mobile radios have the ability to Priority Scan with the radio stopping on the priority channel ONLY with the correct PL/DPL/etc? This feature is found in the HT1000/MT2000 and I'd like to get a mobile with this same ability. I have a Motorola Spectra that stops on the Priority channel ANYTIME activity is there, which I don't want and AFAIK there's no way to have it do otherwise then to set it up with no priority channels.

Anyone with any info? Thanks in advance.

I guess the differences in ability, talent, or whatever makes it easy or hard to learn the code, makes the hobby/sport of Ham Radio so interesting. If we could all do code perfectly and easily, the airwaves would sound like computer data.

I for one, haven't upgraded because I have other things going on, like my 2 year-old daughter and a business. As soon as I make the time, I'll go for the Extra directly. Until then I'll be happy on VHF.

Play on words, maybe, but no it won't....not unless
you program in freqs 30 kHz apart. The 30 kHz
thing is the STEP increment for the SEARCH mode;
not the "scan" mode.

THAT wouldn't be an issue for scanners, anyway.

> There is another digital cellular phone system operating
> between 1710 and 1880 MHz, about which I don't know the
> details. But it too doesn't use 12.5kHz steps.

Neither is that one an issue for scanners. We're
talking about the conventional voice cellular bands.
The kind that *some* scanners can detect.

> In some european countries there is an "older" public phone
> network operating between 450 and 466 MHz that uses various
> stepsizes (20/12.5/10 kHz). It's analog, but truncted and

Neither are "ours".

> There used to be another, which used some bands within the
> 148 to 163 MHz range, but this one has gone outof service

> a few years ago. It used 20kHz steps and communication
> was in the clear.

But that isn't or wasn't cellular, either.

> BTW: You're not allowed to listen to any of those over here. :-(

No shit? I thought you guys were more enlightened than us.

> While you seem to know a lot about how things are in the US, you
> should better inform yourself, before publishing "facts" based on
> guesses. ;-)

Sorry, but I wasn't "guessing". And we ARE talking
about scanners, no matter what. Your exceptions are
not within nor even close to the scanner realm.

> If somebody *realy* is interested, I can post (or mail) all the
> details I might be able to dig out.

Somehow, I doubt that anyone is interested in the
exceptions that don't pertain to scanners and scanning.
But I could be wrong, I guess.

O.K., Then what, if any, scanners *do* scan the cell band at the proper
30khz steps? (I guess I'm still confusing scanning with searching)

Thanks,
Bob

4383. ATAS-100 Update

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-12 00:00:00 UTC
From: Len <umina@ultranet.com>
Message-ID: <6jaq8f$4au$1@ligarius.ultra.net>
Source record: 144214
Cross-posted to: rec.radio.amateur,rec.radio.amateur.antenna,rec.radio.amateur.equipment,uk.radio.amateur

Since writing about this I've heard from several people who have had the same problem and one who had no problem and really liked the antenna.

After playing with the set up for quite some time I figured out how to get it to operate in automatic mode, and although it does work it's a bit cumbersome. Here is what I do:

1. Whenever you push the tune button make sure you hold it in for at least 1 second. A shorter push will cause the antenna to retract to it's smallest position and exit auto tune functionality.

2. When the antenna is not auto tuning (ie because of #1 above or for any other reason) the following sequence of operations will make it auto tune.

a. Close MOX switch. Hold down Mhz up key. If in CW
you will have to hit the key once to get the transmitter
to lock on. This will now start manual tuning mode.

b. Watch the SWR indicator and when it exhibits a match
let it keep going until it gets to a mismatch. Then
use the Mhz down button to bring it back into match.

c. Unlatch the MOX button. If you were in CW the transmitter
may still be locked on, but if you touch the key it will
unlock (this seems to be a firmware bug)

3. Auto tuning will now work on any band and mode as long as you
pay attention to #1 above.

Bottom line seems to be that auto tuning only works after the antenna has been brought into a matching condition on any band. For my tests I've been using 21 Mhz but I think it will work anywhere. If you accidently bump the tune button for less than the required 1/2 second to invoke auto tuning the antenna will need to be manually matched before auto tuning will work again.

The testing that led to this discovery included changing antenna mounts and when I decided that made no difference I went back to the "recommended" Comet mount. One difference though, when I put it back on I left the aluminum strip out of the mount. This made the mound dig into the finish of the truck a little bit (not a problem) and may have given me a slightly better ground, although I doubt it.

By manually tuning as above, and being very careful not to do a short push on the tune button, I am now able to enjoy the full functionality of the ATAS-100 and it's great.

I do think they need to rev the firmware. It would be a lot better for mobile operation to have retract and tune sequences be reversed from what they are, and the TX locking on in the CW position needs to be fixed. I also need to verify it again which I will do for a subsequent posting.

/Len

70MHz is a ham band in the U.K. and maybe 2-3 other European
countries. (Ireland, Gibraltar, and Cyprus?)

It'd sure be nice to have it over here, but channel 4 TV stations (one
of which I work for..) might have a problem with it!

Static is DC, the best way to discharge it is to drain it off with high
value resistors. Something on the order of a megohm from each
leg of the feeder to ground should do it nicely (static is very high
voltage but miniscule current, a very high value resistor is sufficient
to clamp it to a minor potential). Your transmitter will never notice
the high shunt resistances. If you use a glow discharge tube, you'll
get a nasty pop in your receiver every time the voltage builds up to
firing potential. This can be worse than ignition noise.

Air gap spark gaps are better than nothing for lightning protection,
but their firing potential varies wildly with humidity and barometric
pressure. *This* is where you want gas discharge tubes. Not little
neon bulbs, however, you want real purpose designed suppressors.
Polyphaser sells "naked" gas tubes with wire leads for suppressing
open wire line. You want to put one across the two wires, and one
from each wire directly to ground (keep these very short). These gas
tubes can handle strike current, but just installing gas tubes won't
completely protect your equipment from a direct strike. There are a
number of other measures you must take too, to prevent strike damage.
I've covered that at length in other posts, most recently on the antenna
newsgroup. Check Dejanews.

>WPM exam. Again, it all has to do with the degree of motivation you
>have.

Generalization alert! I know people who are highly motivated, use all the right practice techniques, practice diligently, and still don't get it after years of effort, not even 5 WPM. I had a rough time of it myself, though not to that extreme. It took me 6 weeks to get to 5 WPM and 13 months of 2 hour a day practice to get to 13 WPM. (That was with the old fashioned progressive approach, but it wasn't 1 WPM per month, I hit the wall at 8 WPM and was stuck there for months before I finally broke through. My personal best ever speed, when I was NCS of the KTN, was 18 WPM. That's another wall for me.)

OTOH, I know others who picked it up in a week or two. A close friend of mine did, much to my annoyance, back when we were both Novices trying for General. He's one of those insufferable people who operate Morse mobile in motion. The variation, even among highly motivated people, is very large.

I once thought, as many do, that musical talent had something to do with it. I don't any longer. I now know some professional musicians who just can't get it, and some tone deaf hazards on the dance floor who took to it like a duck to water. It is a separate talent. I've done a bit of research on this since I had such a hard time of it, and that got me curious to find out why. I still don't know the answer for sure, but it is a different area of the brain which is involved in emulating a modem than is used for either musical ability or language fluency. There is no noticable correlation between either of those abilities and Morse talent.

But even a no talent can usually bang out a wooden rendition of Chopsticks if he hangs in there long enough. And most people lacking the Morse talent can squeak through the 13 WPM test if they keep at it long enough. Good drill techniques can help. Those techniques weren't around when I was struggling with Morse, but they've been a big help to people I've tutored to pass the tests in recent years. (Actually, the Koch technique dates from WWII, but it wasn't widely known in amateur radio circles until just a few years ago.)

I can teach anyone with an IQ above plant life enough electronic theory to get through the written exams, but I can't teach everyone Morse Code.

There is a talent factor there which cannot be denied. It isn't the same as musical talent, but it has some similar features. Among highly motivated students, maybe one in ten picks it up easily, eight in ten get it after more or less struggle, and another one in ten just doesn't get it at all. (That's not a rigorous statistical breakdown, I've never seen one of those, but it tallies fairly well with my own experience teaching amateur classes.)

> of which I work for..) might have a problem with it!

All western European TV is now above 70cms. That means that TVI from
HF is a mere footnote in history, but I remember when there was only
one London TV station, and that was on the second harmonic of 15m. On
4m (that's what we call the 70MHz band) we do hear Polish and Russian
Broadcast QRM when the band is open with sporadic E.

I was wondering where the software for the V7A that I hear everyone talking about is available at. I wrote kenwood and they said they haven't released their software yet and it will be out and for free around mid june or july. I was wondering what everyone was talking about that they were using to control / program the V7A. If anyone wants to pass this software along, I would be greatly appreciated also! <G>

hi the name here is alan and i have the following
for sale.
kenwood tm-731a dual band mobile. it has all of
the usual features includeing ctcss encode, cross
band bi-directional repeat, dtmf mic, standard
mobile brackets. (45watts 2meter, 35 on 440).
its in real good shape and works fine. it has had
the extended rx/tx mods done to it as well.
(136 to 174 and 400 to 500mhz)
i have the original box and a copy of the factory
manual as well.
i will sell it for $325 (firm) plus $15 for
shipping.
if you are interested please e-mail me back at

Tks for the clarification Chris,

I was going crazy trying to figure out how to run in full duplex with the
800 MHz radio and thought that I was missing something obvious given that ll
the of instructions I have seen made it look as if was something simple to
carry out.

Would you recommend some other radio for full duplex conversion that has an
architecture that is more suitable. Note that the performance of the Exec II
was quite good, on TX we got a C/N of 52dB with 0.5% distortion. The receiver
still needs to be tweeked at full quieting the SNR stands at 42dB and THD is
down to 2% for now.

4409. New version of Linux-based Yaesu HT configuration software

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-12 00:00:00 UTC
From: Riku Kalinen <riku.kalinen@xxnixuxx.fi>
Message-ID: <3558243E.B7DEC69F@xxnixuxx.fi>
Source record: 144301
Cross-posted to: rec.radio.amateur.equipment,sfnet.harrastus.ham

Hello, I made a new version of my Yaesu HT control software.

Software is Linux-based. It includes protocol descriptions between
radio and computer.

Supported rigs are FT-50 and VX-1. Real soon now I will include
some Icom support (IC-T8, IC-T2, propably IC-Q7).

To use the software, you will need the control cable. Only source
I am aware of is RT systems, which sells the programming software
for Wintel environment.

The software is still on ALPHA stage, so be warned.

Software itself can be found directly from

ftp://ftp.funet.fi/pub/ham/unix/Linux/rigctrl/

or via my homepage:

http://www.iki.fi/~riku/

Feedback is appreciated.

The following points are especially worth knowing (from file
description.txt):

NOTE: `send' with bad data can possibly cause radio to reset
(CERR on display). Usually just re-sending the data works.
Probable cause for this is SQL set too tight (FT-50). Reset
caused by incomplete upload resets SQL to open, then subsequent
upload succeeds.

NOTE: Sometimes `send' fails with FT-50 repeatedly with no
apparent reason. This problem may be releated to timings.
Re-sending usually works at some point.

NOTE: Apparently VX-1 calculates checksums with (at least) two
different algorithms. If checksum tests fail for
freshly-downloaded data, please try alternate checksum algorithm
(see Makefile and yaesu.c for details).

Source record: 144303

Tom,
You have to look at the distribution of ground currents. For a 1/4 wavelength ant the ground current concentration is around the base of the antenna to near the base of the antenna, decreasing as you travel away from the antenna.

For a 1/2 wavelength antenna the ground currents are low around and near the base (thus the hi-z imped) and increasing as you travel out from the ant to a max 1/2 wavelength out, then decreasing again. So, if you follow the practice of using 1/4 wave long radials, the ground currents are higher in an area where ground currents are highest. As far as takeoff angles: They are very dependent on ground conditions, the interaction of reflection and absorption at the wave/ground interface.

This is much to long a subject to handle except in the most general terms, an excellent reference for this is "Low Band Dxing' pub by the ARRL.

you mean UK or western Europe? In Germany, there are many TV-stns in
Band III (174MHz -350MHz). More, we still have 2 TV repeaters in Band
I (50MHz), but they wil be shut down soon.

>That means that TVI from
>HF is a mere footnote in history, but I remember when there was only
>one London TV station, and that was on the second harmonic of 15m. On

living 70km from Polish border I do not need sporadic to hear them :-)
Poland (and also Russia) is moving theirs FM broadcast to CCIR band
(88-108 MHz). They started many years ago assigning frequencies in
range 100-108 MHz to new stations. Since 1993 or so, existing stations
in 4m band sends also in "upper band" i.e. 88-108 MHz. I hope, in 5-6
years, there will be no broadcast allocation in 70MHz area.
In Germany 70MHz is allocated to police and military services. So
there is no chance for ham allocation in this range :-((but who knows
?.?.?.....

Greetings from Germany

Fellow Hams,
The time for action is at hand. There is only a short time to act on this.
It appears to me that they gave us less than a month to reply so that this would not have time to be published in the ham magazines, so we must use other methods to get the word out quickly. Please read thru the info below, I got it from a remailer that I am on at home but I wanted to share this with all the hams I know. Each one of us must act or lose one of our most popular ham bands.
All you need to do is write a short note saying that you oppose RM 9267.
Send it to -
Secretary, FCC, Washington DC, 20554.
and do it by June 1st. Be sure to sign it with your name and address and callsign.
73, Dave KD5FX

Greetings:

I know that this subject has been broached in the remailer. But here's some more info which was just brought to my attention.

First one from the ARRL, the second from WA6ITF & Company.

73 - Tom N0SS

SB QST @ ARL $ARLB030
ARLB030 LMCC petition opposed

ZCZC AG30
QST de W1AW
ARRL Bulletin 30 ARLB030
>From ARRL Headquarters
Newington CT May 7, 1998
To all radio amateurs

SB QST ARL ARLB030
ARLB030 LMCC petition opposed

The ARRL is organizing opposition to a new threat to the 70-cm Amateur Radio band. The Land Mobile Communications Council (LMCC) has asked the FCC to immediately reallocate 420 to 430 MHz and 440 to 450 MHz from the federal government to the Private Mobile Radio Service (PMRS) on a primary basis. Amateur Radio now enjoys the use of 420 to 450 MHz on a secondary basis, and the 430 to 440 MHz

segment is an international allocation. The 70-cm band is the second most popular of the hobby's VHF/UHF allocations, with substantial FM repeater and other operation in the 440 to 450 MHz segment and a variety of uses in the 420 to 430 MHz segment.

The LMCC request, based on ''additional spectrum needs of the PMRS community,'' acknowledges Amateur Radio's use of 420 to 430 and 440 to 450 MHz, and suggests that ham radio applications can remain secondary to PMRS in those segments, but offers no explanation of how sharing could be accomplished. The LMCC says it believes the 430 to 440 MHz subband ''is more important to the amateurs for use in emerging technologies such as links with spacecraft and amateur television applications.''

The petition also suggests that equipment availability and technology resulting from an expanded PMRS presence on 70 cm would benefit hams ''pursuing such applications as compressed video television in the 430-440 MHz band.'' The LMCC concedes, however, that its ''most urgent need'' for PMRS is voice and low-speed data applications, not advanced technologies which might come later on.

The petition also notes that PMRS already uses 420 to 430 MHz in three Canadian border cities (Buffalo, Cleveland and Detroit) and a ''reduction in military use of this band is foreseen.''

The LMCC also seeks allocations at 1390 to 1400 MHz, 1427-1432 MHz, and 1670 to 1675 MHz as well as 85 MHz at 960 to 1215 MHz by 2010.

Comments are due on the LMCC's Petition for Rulemaking, RM-9267, by June 1. Reply comments are due by June 15.

MORE INFO....

From: BillWA6ITF <BillWA6ITF@aol.com>
To: repeater@repeater.net
Subject: [rpt] Newsline Version - 420 MHz threat: RM-9267 from LMCC
Date: Fri, 8 May 1998 14:07:50 EDT

Here is our Newsline version of the story. Unlike every elses, it gives info on how to protest and where to send that protest -- aka -- commentary.

I'll add -- do not look to the ARRL, W5YI, the FCC or anyone else for salvation on this one. ONLY YOU can save our ham bands. Do not wait for some 'annointing power' from Newington, Dallas or Washington to tell you what you already know. These are you bands. You and only you can protect them.

Learn to be your own leader instead of playng 'follow the leader.'

de Bill Pasternak, WA6ITF / Newsline

LMCC DEMANDS 70 CM HAM BAND FOR COMMERCIAL USE

The Land Mobile Communications Council has issued a demand to the FCC that it immediately reallocate of most of the 70 centimeter Amateur band over to private mobile operations with private land mobile designated as the primary user.

Technically the document is nothing more than a formal rule making request to the FCC that has been designated RM 9267. In reality it is more a demand by the LMCC for the FCC to immediately reallocate 420 to 430 MHz and 440 to 450 MHz away from the federal government and over to the Private Mobile Radio Service on a primary basis. The Land Mobile Communications Council is also asking for news allocations at 1390 to 1400 MHz, 1427-1432 MHz, and 1670 to 1675 MHz. It is also demanding a walloping 85 MHz at 960 to 1215 MHz and it wants all of this turned over to the Private Mobile Radio Service no later than 2010.

But LMCC is not willing to wait until 2010 to take over the 70 centimeter band even though this is the second most popular of the Amateur radio services' VHF and UHF allocations. Amateur Radio is a secondary user of 420 to 450 MHz. There are thousands of FM repeaters operating from 440 to 450 MHz and a variety of modes on the air every day in the 420 to 430 MHz segment. While the Land Mobile Communications Council petition indicates that it is willing to permit Amateur Radio to retain some sort of secondary status, this would be only on a non-interfereing basis with the new commercial interests.

Experts say that the best way to kill RM 9267 is though a massive letter writing campaign to the FCC. A campaign that outlines the specific use of the band by Amateur Radio Interests -- informational filings that detail how every hertz of 420 to 430 and 440 to 450 MHz is utilized on a day to day basis by hams.

The commentary cutoff date on RM 9267 is June 1st. This leaves precious little time for radio amateurs around the nation to react. Those responding must be certain to reference RM 9267 at the top of your letter. Send comments to the Secretary, FCC, Washington DC, 20554.

Again, that June 1st as the commentary cutoff date on RM 9267. Comments go to the Secretary, FCC, Washington DC, 20554.

EDITORIAL:

This is actually an end run by the LMCC to get spectrum for free. Others in the same business have had to BUY the spectrum

at auction. This is only the first in the pressures to get spectrum for free when others have pay for it. There main argument will be that their spectrum loading studies indicate that these frequencies are used very little by Amateurs and a secondary use basis is adequate for the Amateur needs. Just think of it folks, all those phantom repeaters that are on the coordination books that have been blocking the real use of these frequencies will be our undoing. The other ugly fact is that the LMCC members contribute to congressional re-election campaign fund and the Amateurs do not.

These are the facts. The spectrum alligator is biting off chunks all the time. 902-928MHZ has become useless will the addition of many other users. We are about to lose 1240-1260MHZ. Every year we will see more chunks bitten off our spectrum. The argument that Amateurs push forward technology just isn't true today. The only thing we support is technology that is 30 to 50 years old. The commercial market has pushed technology and we have resisted. As far as the Amateur is concerned 1200 baud is good enough. Try that one on any 14 year old today and they will laugh at you. Ask most Amateurs what TDMA or CDMA is and you will get a blank stare. Our amateur community has insisted that the rules OUTLAW any technological progress. The last change was when SSB came in the 50's. The digital technology we support is from the 30's. Today we have to justify our usage. We can bicker all we want, others will only view this with amusement.

I think we agree on all points here. One suggestion I have for everyone here:

Crosslink! Take your 52, 220, 440, 1.2 pairs and link them, FULL TIME, to the busy 2m repeaters in town. That will at least get some voices into our under used spectrum. If people bitch, tell them to go talk on another repeater.

I'm sure all of these groups going for spectrum have spectrum analizers in storage mode across all bands. Where they see quiet, they demand, and I think rightfully so, to use it for more productive uses. We've sat on our butts for years moaning about HF (which NO ONE wants) and contests (getting points for adding to congestion?) and CW (there's a bright idea, insist that people use the most narrow bandwidth to justify more spectrum).

Time to get the projects off the bench and on the air. I'm guilty too... I have a couple repeaters to install. Let's let this be our motivation.

Don't think about writing to your congressman or the FCC until you can honestly say you're helping the service. If you're on the same bands and the same modes as you were 10 years ago, YOU

are the one that caused this situation.

Any users out there actually used the 2020
for portable/mobile/backpack operation yet ?
It would be nice to know how long you get on
rechargeable batteries, what with its quoted
low power consumption and all.
How well does that pass & shift filter work, as
i`ve never heard a SCAF filter before ?
If you have used it out and about, what aerial
seemed to work best ?
Thanks in advance.
Gary.

Looking for the dial glass for a Hallicrafters S-107 receiver.
Will buy complete parts rig if necessary. Markings must be in
excellent condition with no peeling or wear, and glass itself
must be scratch-free and not damaged.

I have dealt with their Burbank store and the experiences have been a
little less than satisfactory. I have only had my license a couple of
months. While the prices on the stuff I have bought from them have
been OK, they seem to be a little rude and do not like having to deal
with people who don't know as much about radio as they do. I would
think twice about going back.

Do you know if Eastern Europe/Russia have any plans to leave Band I?
(it looks like the days of trans-Atlantic DXTV in the eastbound
direction are over!)

Luckily for European TV DXers, Band I (known as "low-band VHF" over
here) will be used for TV in the USA indefinitely. In fact, some
digital TV licenses have already been issued for these channels though
none of those stations are on the air yet.

I am have a 2020 I received it Saturday.

I have not worked out the battery situation yet.
However the power can be set in one watt increments form 1 to over 20
watts. No matter what battery you are using you control the power drain.
So sorry I dont have the answer. I put off a kayak trip to try and find
some of these answers.

My 2020 is on a T-switchwith the Yaesu 847 to my traped Dipole for quick
comparison. For a fair comparison I turn off the 847's DSP, notch filter,
noise filter, noise blanker, pre amp and tuner! Wew that 847 is loaded.
So the 847 is in basic mode so to speak.

In that mode I would estimate the 2020 is very close on receive. Its a
little worse on the week stations.

Adjacent rejection is much better on the 847 - BUT not bad on the 2020.
BUT also I have not the 2020
long enough to put the Band pass tuning thru its full test so
dont take this as a negative. Its more a first impression. Just bare bones
to bare bones the 847 seems better in the rejection dept (as one might
expect - the 847 costs 3 times the price and is several times larger in
size). Turn on the other features of the 847 leaps ahead as expected.

I have a tuner on order and plan to try a random wire.

Right now I am using a Spior Trap Dipole

Paul,
When the band is up, you can find CW between 50.08 and 50.100. Using CW on 6 M is a great way to snag new grids under marginal conditions or if you don't have a big station. Unfortunately many of the 6 M ops would rather miss new opportunities than try CW, so there isn't much QRM.

> ?.?.?.....

I hope that other European countries do get allocations. 70Mhz seems
to have far better tropo range than 6m and also enjoys frequent Es,
so it's in a marvelous position in the spectrum. The fact that an
opening to the UK only gives us an unwelcome concert from Radio
Gdansk is a terrible shame and a waste.

I would like any comments on the Icom W32a. I plan on using this in my house and car as well as a HT. How would this radio work for CAP, ARES, RACES and foxhunting. I have heard that attaching any antenna that has +gain will overload the receaver and not preform very well. I understand that a mobile would work better but I can only afford one radio right now.

thanks in advance for the comments

The HRO500 is not your bog standard ex WW2 HRO with plug in coils!
It is a very complex piece of solidstate gear with a discrete
phase locked loop system.

They were made in the mid sixties (about 30 years old) and are
littered with RTL Logic which are no longer available. This rcvr
is a real beasty and was so expensive you needed a mortgage! Alas
I saw one advertised in the mags a year or two ago for under a hundred
pounds, how things change.

Unless you have a full workshop manual leave it well alone.

John

Who cares why he wants them. I own 2 of them. One handheld K band and one K band moving. Use mine at the local race track and for other things.

Looking for a handheld moving k band one.

Europe has largely removed VHF TV stations from the airwaves to make room
for commercial users. 4m operation has been legal for some time in Gibraltar
although the bad news is currently there is nobody active.

I know the VHF ones have about 7db loss. You should not need it
with a good duplexer. With split antennas who knows? I have a Hamtronics
gasfet at the output of my t1504 duplexer(Motorola)on a Micor repeater
station and it works good at a crowded site. You might consider using
the Mocom for the repeater RX.

Source record: 144048

I can't say for sure but in the past most Alinco radios have a loop of blue wire. When you cut this loop it expands the radio's transmit range completely. You might want to investigate more before you try this, though.

#fleet@mbl.edu (K1SWR) wrote:

>Anyone out there have the freq. expansion mod for the 847?

It's simple.
Open the bottom of the transciever.
Locate the lithium battery
Next to it you'll see some numbered solder pads
Put solder on pads 2 & 3 (pad 1 should already have a chip resistor
installed on it.
Turn on transciever while pressing LOCK and FAST buttons.
You will lose all memories on the transceiver and will have to reload
them.

Message-ID: <01bd7e9e$ed12b280$addc2dc7@default>
Source record: 144057

Does anyone have experience with SUPER DRIVE, where a tetrode or pentode is connected in grounded grid and the drive is applied to the cathode and control grid..(they are connected together), and the screen grid is grounded...More articles are appearing using tetrodes, 4-1000, 4cx250 etc in this hookup along with some amplifier manufactures reverting back to the tetrodes...Claims are that this configuration is more linear, provides a more constant load on the exciter, does not require neutralization and best of all, the distortion, harmonics are less along with tube efficiency being about the same 60-72% depending upon loading, drive etc...drive requirements are the same as conventional grounded grid configuration...

Sure would appreciate hearing and receiving advice on the above...would like to build a 4CX250 amplifier and try the Super Drive arrangement...Thanks...Dwight Raddatz, draddatz@gwe.net

4466. WTB: Junk ICOM IC-27, IC-37A, or IC-47A

Hi,
I have a Icom 27-H that is working fine, EXCEPT the LED display. I am unsure if the problem is in the display or the chip that drives it, however if you have an old IC-27, 37A, or 47A (the LEDs are the same) that failed for some other reason that it sitting around in you way, just taking up space, and otherwise annoying you (or your YF), this could be your OPPORTUNITY OF A LIFETIME, YOU may HAVE ALREADY WON!!! (Oops, forget that part about winning, I just got carried away, you didn't win anything, and I am sorry that I even brought it up.)
Nevertheless, perhaps we CAN help each other out by me sending a little money your way and you sending your junk my way. Plus, we can keep one radio out of the local landfill and HELP SAVE THE EARTH FOR OUR CHILDREN AND GRANDCHILDREN!! (Yea! That's the ticket. Yes it IS hyperbole, but in THIS case, it is at least TRUE hyperbole.) ;->

Thanks for reading this. Even if you have no interest, I hope you enjoyed my bs.

Best of Luck & 73,

Don W9DEW

Remember: this is a hobby, this is only a hobby, it is supposed to be fun.

Message-ID: <3559F107.34D5@foreign-interests.com>
Source record: 144059

Hi all,

I've looked over all the sales and tech specs I can get my
virtual hands on, but still have a few questions about this rig:

Exactly how are these set?: CW speed, weight, sidetone volume,
power out. Also, once set are the settings retained after
cycling power?

Can two CW filters be installed in addition to the DSP add-on?

Is there any reason to buy ICOM's (high-priced) PS-85 or would
any old 20A+ Astron do?

Any other general positive or negative comments about the 706MKII
would also be appreciated.

tnx es 73,

>cycling power?

Sidetone volume is set by a small recessed pot on the side of the radio.
CW speed, tone, weight, and power are set under the Quick Set Mode items
and are stored in EEPROM.

>
>Can two CW filters be installed in addition to the DSP add-on?
>

Yes, any combination of the filters available for the 706 II can be put in.
There are 2 optional filter slots. You set the filter type for each slot in
the Initial Setup Mode.

>Is there any reason to buy ICOM's (high-priced) PS-85 or would
>any old 20A+ Astron do?
>

Not unless you just like matching equipment. Try mounting it in the car
and you won't need either power supply...

>Any other general positive or negative comments about the 706MKII
>would also be appreciated.
>

It is a great mobile radio. Small and compact and simple to operate going
down the road. The detachable control head expands the possible mounting
configurations in smaller vehicles.

I love the radio. The only thing I wish I could find is an easy way to program the memory channels with a PC in a file including the alpha display. I have yet to find this. I believe all of the settings is with EEPROM and is not lost with power. When you remove power, it comes back as if it always had power. No problem. Let me know if you see some software for the memory channels and what hardware you need to program. Paul KD0X.

From: Tae <tkang@digidesign.com>
Message-ID: <355A2E46.56DC17B8@digidesign.com>
Source record: 144073

I have a TM-V7A and would like to automatically mute or attenuate the secondary band when the primary band receives audio. This feature is on Kenwood's earlier model TM-733A. Kenwood's support line told me the TM-V7A does not have this feature and they don't plan to add it.

Does anyone know of any way to do this automatically without having to turn down the volume on the secondary band each time? Thanks in advance.

Dennis

Jeffrey,

Thanks for the comments!

I want to use it both mobile and as a base station. Looks like
the key and mic jacks are on the base unit, which adds some

limitations to conveniently locating it in a vehicle even with
the remote cable.

I had a similar problem with my GMC pickup. Discovered that the cab,
being mounted on rubber doughnuts, was not grounded to the chassis.
I added a large ground strap from one of the seatbelt mounting bolts to
the chassis, and it fixed my problems with RF getting into everything.

Hello, My name is James, call is KI6JD. I have for sale a nice condition Century 22 CW rig. It has a built in keyer and calibrator. Has SWR, S- Meter, and Power meter and covers 80, 40, 30, 20, 15, and 10 meters. Runs 50 watts input. I bought the rig for mountain toppinb but seldom find the time. My price is $275.00 and you pay for shipping. Unit weights about 5-6 lbs. I can be reached via e-mail at: ki6jd@ix.netcom.com 73's James

4497. Dealing with HRO

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-13 00:00:00 UTC
From: kd1my@banet.net
Message-ID: <6jartr$pd2$1@nnrp1.dejanews.com>
Source record: 144137

I have bought many new radios and accessories from HRO in Salem, New Hampshire and thier service is excellent. If I order by noon I have it the next day if in stock. Only one time a problem and it was handled by a simple phone call no questions asked. They will meet other's prices and pay shipping on any major purchase. I recommend them highly.

Daiwa model CN-101L cross needle meter to swap or sell.
Covers 1.8 to 150 mhz and 1 watt to 1.5 kilowatts.
Has lighted meter, 3 scales and measures peak or average power.
Brand new in the box with manual.

Would swap for a Kenwood desk microphone like MC-60 or sell outright for
$70. U.S. including shipping and insurance. HRO sells it for $89.95.
Inquire by email.

Source record: 144142

Had my T8A on a HP 8640B signal generator and found the receive sensitivity to be .36uv (the receiver at 222-225 MHz is numb as a post!).

I measured the output power at 800mW on my unit (Telewave Model 44).

Overall, for anything but very close in work, the HT is useless on 1 1/4 meters.

We have written a Toroid software package for use DC to 300 MHz. Many Years of research has gone into error corrections for the low perm cores , 200 & 360 degree coverage as well as SRF for series and shunt coils. Much of this has come about as a request from Micrometals. The pin point accuracy allows us to add a custom core feature for custom shaped cores, stacking cores side by side, ferrites, non Micrometal parts and machining custom phenolic cores from plastic, teflon, wood, ect...
Down load a demo or just view the software main screen at our web

The problem with this, is not all repeaters have open patches on them.
Leads me to believe that someone should publish maps with
repeaters/coverage areas with instant LiTZ emergency accessibility.
This would make things easier.... Find the repeater, key it up, hold
the zero, get a 911 operator. Only problem with this is if any
misuse occurs, its nearly impossible to track!

Gee, are you sure? Well, dohhh...

What I was trying to say is that if the general truck / trucking
company
operators were to maintain their attitude as they are now then the hell
with them.
I realize that not all of them are like that and I apologize to those
who
might get offended, but after years and years of highway driving I've
seen
it all. The stunts and tricks they can pull off are just amazing but
that's
OK 'cause my cell phone is ready to go anytime one of the pisses me off.

All those who are about to respond that this topic doesn't belong here,
I agree.
Let's take this somewhere else boys.

> 30khz steps? (I guess I'm still confusing scanning with searching)

The two are very different functions. Scanning is
the automated repetitive tuning of two or more
pre-programmed frequencies, typically what you
key in to the memory bank.

Searching is an automated service that "scans"
at preset increments all frequencies between
upper and lower frequency limits. This limit
may be user-definable or it may be embedded in
the firmware at the factory, depending on the
scanner.

In a word, you program into memory anywhere from
a few dozen to a few hundred frequencies to be
"scanned", whereas the Search function is very
methodical and thorough in sampling every freq
between the predefined limits.

Don't put down other people's effort just to make yourself look good.
He was at least contributing to a thread that I find *interesting*
even though I don't own a T8A. The guy might not have a spectrum analyzer for
all you know. I think the info on the receive sens that
he gave .36uV was very interesting. I do own a Yaesu FT8500 that has the same
problem in the 800-996 band. I just have to find some strong signals with the
HT to try and test it out....

Bottom line: Some info is better than none.

Additional Question: What does standby mean? In which case is this signal active, what is the active state? What type is the output, I guess open collector?

I got mine yesterday and my manual is a little confusing.

Most of the comments state, the blower is noisy and the audio not regulated. My opinion: The blower is not noisy, just like the small CPU coolers, and the audio level is fine.

Fine: to see VFO/AB at the same time

Could be better: RIT should be displayed separatly. You cannot control your original frequency in the way like FT847 works. Maybe split operation would solve the problem...

Principal problem: No dual receive, like my C-568 handy...

well, it was planned, that OIRT allocations (64-74MHz) will be leaved
by end of 1999, but.... It is almost sure, that they will persist few
more years. Many (rather poor) people in Russia and other former OIRT
countries (Czech Rep, Slovakia, Hungary, Romania, Bulgaria and so on,
and all former Soviet Union) have their old radio receivers with only
65-74MHz vhf. It was discussed in Poland to leave this band by end of
2002, but we shall wait and drink some tea... The best message is:
there are no new allocations in Poland in this band.

IMHO, You missed the point. It is not the short range distribution with trucks, which makes the problems, it is the long haul transport. It may be slightly different in the USA, but here in Europe the *big* problems with traffic are due to the fact, that e.g. Finnish trees are sent to Italian sawmills and then to danish furniture companies to be brought back to Spain and sold there. Even worse, cattle is transported all over Europe, just because the slaughterhouse at the other end is slightly cheaper. This is perverse, period.
Independently if such ping-pong transports are reasonable, the overall costs (road maintenance costs, air pollution, public costs due to accidents, traffic jams etc) of trucks would be ways higher, than those of trains. The problem is simply, that not the truck companies (or their customers) have to pay it, but the public (via taxes, etc). This is why the cost comparisons between truck and train transportation are so distorted for the advantage for trucks.

73 Robert

PS: we should move this discussion to a more appropriate NG.

Have to get 2 radios at Dayton. The 2 radios in question are dual
banders (2m/440).
My question is do they receive/display both bands at same time, or do
you have to switch them?
PSE reply via email address below, thanks 73

Looking for a used inexpensive memory keyer and an Iambic paddle of some sort. Keyer only needs 4 memories. Mainly looking for something to call CQ with. I know about all the keyer chips and all that available out there that but have no time to build so just looking for something ready to go. Paddle could be an old Brown Bros., Bencher, HamKey or similar but must be Iambic. Condition not important as long as it works good. Email me please.

Neither the G-71A nor the TM-G707 have dual displays, but you can
monitor both bands by programming them into memory and scanning your
memories. This works better for me, but might not for you. For dual
display, you will need the TH-79A/D and the TM-V7A.

> It doesn't really matter what you call it,
> as long as you know what it means, now does it?
#
Right. Except no one's going to know what you
mean if you insist on concocting your own terms.
"Scanning" and "Searching" are as succinct and
simple as it gets.....not to mention fairly widely
accepted in the vernacular.

Icom IC-Z1A manual, page 30:

Full scan: scans all frequencies over the entire band (I would assume using
whatever "step" you have set)
Memory scan: scans all memories in sequence
Programmed scan: scans all frequencies in a user programmed range

So I said band scan instead of full scan or programmed scan. Point is, I
didn't invent any terms not already widely in use, at least in my part of
the country/world.

Matthew

Source record: 143990

Hi all,

I, too, am looking for the HT that is best for me. I've read enough postings in this group to know that each radio has it's fans and each can be considered "best" depending on what my needs are. Maybe I should look at it differently.

Those of you with dualband handhelds: What features did your radio have that caused you to buy it? Do you really value those features today? Now that you've had your rig, do you wish that it had other features?

For example, I may buy a certain handheld thinking that I really need cross-band repeat. In reality, that may not be so important for most users. Maybe it's more important that my mobile rig do cross-band repeat. Or, maybe I don't care too much about the physical size of a radio, but after purchasing it I then decide that "size does matter" if it's going to be clipped to my belt.

I'd really appreciate your input on this one. I think it is a different way of looking at the age-old debate about what is the best handheld.

You can post a response to the group or to me at boatbum@mailexcite.com.

Thanks,
Chris I.

Has anyone looked at the new Kenwood VC-H1 that can tell us what
slowscan TV operating modes it comes with?

I've heard that it only has the old Robot 36 second and Blackand White robot
modes.
Can anyone tell us if this is true?

4556. FS: Hallicrafters SX-43 receiver w/manuals - project radio

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-14 00:00:00 UTC
From: k5dh@rtis.ray.com
Message-ID: <6jfp1b$5ge@sf18.dseg.ti.com>
Source record: 143996
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I have a Hallicrafters SX-43 receiver for sale. This radio is
a "fixer-upper". Here's a description of its condition:

The front panel has random spots of rust forming underneath the
paint (typical for ham gear of this vintage). The paint is not
real bad except for the rust spots forming. The spots are not
huge, but they are noticeable. The front panel lettering is in
remarkably good shape. All of the knobs are original and are in
good shape. The VFO dials are fine, as is the S-meter, but the
dial cord for the bandspread dial is broken. The cabinet has no
dents, but the paint is worn and there is some light rust on it.
It would be a fairly easy job to strip, clean, and refinish it.
The chassis has a light coating of dust, grime, and corrosion,
but the corrosion is not serious, and there is very little rust.
There are no components missing or damaged, and all tubes are in
place (although I can't vouch for their condition as I have not
checked them). The underside of the chassis is remarkable clean
and shows no damage. All of the old wax paper capacitors would
naturally have to be replaced, as would the electrolytics (this
is standard procedure when restoring an old receiver anyway). I
have never powered up the set, so I have no idea if it works or
not. All tubes are in place. The 6V6 audio output tube is good
(it was missing when I got the receiver, and I put a known good
one in that socket). The remainder of the tubes are untested.
I will include photocopies of the Owner's Manual and the Sams
Photofacts manual (good clean copies).

The price is $50 plus UPS ground shipping from ZIP code 75065.
This is a heavy radio. Figure on 60 lbs.

I had this set sold at one time, and I got it all packed up
and ready to ship, but the buyer never came through and he is
not responding to my emails. I've given him over a month to
come through and he hasn't, so the receiver is back on the
market again!

Interested? Email me!

73,
Dean - K5DH

Source record: 144001

The "So Called" liberty nit thinks that only "they" can use 3950 and jams anyone who uses it that isn't in their gang. They are listed as a HATE GROUP on a page used by law enforcement Officials all over the Country! They jam and harrass others using the frequency in order to run them off of 3950. They have some type of political agenda for that frequency and have advertised in in many many places. They think that it's their "Private Shortwave Broadcast Frequency" Many other Amateurs USE this frequency and are sick and tired of it!
Check them out at http://www.officer.com take the Hate directory and about 90% of the way down there they are! This page is maintained by universities and law agencies and is an indication of what this bunch is about!
Personally I don't care except for the fact that they have and are still jamming other"good" amateurs that also use that frequency. The net control W1WCR initiates, condones and participates in this activity and is largely responsible for the mess on 3950.
The frequency does not belong to the liberty nits - any licensed amateur can use 3950 and should not have to put up with their jamming and harrassment tactics. LOOK at the pages listed below and SEE FOR YOURSELF!

Source record: 144090

E.F. Johnson Viking Challenger Transmitter and Morse code key
with Johnson manual.

Photo at:

http://www.geocities.com/Athens/Forum/3417/VIKING.JPG

Owned by non-smoker, so the meters are pure white and not
yellowed as one usually would expect with old boatanchors.

The unit's power cords, etc. need replacing due to the old rubber
insulation cracking. Could not be plugged in for this reason.

Purchased off the son of the gentleman who bought it brand new.
This unit was represented to me by this gentleman's son as
probably being in good cond, but he did not remember his father
using it for quite a while. His point was that it probably ran
the last time his father used it many years ago.

Will consider all offers on the unit over $150 plus shipping.

Thanks.

4574. FS: Two Collector Quality Hammarlund Radios

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-14 00:00:00 UTC
From: Karlan@juno.com
Message-ID: <6jdgrg$1pt$1@nnrp1.dejanews.com>
Source record: 144092

TWO NICE HAMMARLUNDS FOR SALE:

HQ-140-X (no speaker)

HQ-170 with matching Hammarlund Speaker (original owner).

Both units are in extremely nice shape for units this old. Of course there's some minor scratches and the like, but these would be considered extremely well kept and collector quality. Plus both units were owned by people who were not smokers, thus the meters and dials are pure white and not yellowed as one usually would expect with old boatanchors.

Photos:

HQ-140-x: I underexposed the camera and will have to retake photos. Once someone sees the super condition. I hope it will move quickly. Purchased off the gentleman directly who owned it. He is retiring and wishes to reduce his collection. He stated that the unit was recently gone over and is in super operating condition. $250 or b/o plus shipping costs.

HQ-170 & Matching Hammarlund Speaker:

Have taken all sides so you can see the condition.

http://www.geocities.com/Athens/Forum/3417/HQ-170-1.JPG
http://www.geocities.com/Athens/Forum/3417/HQ-170-2.JPG
http://www.geocities.com/Athens/Forum/3417/HQ-170-3.JPG

Purchased off the son of the gentleman who bought it brand new. The unit was represented to me by this gentleman's son as being in good cond., because that's the way his father was. The son said it was operating fine before he removed it from his father's home. Said he and his brother were listening to the Dodger's game. I am not an expert at this type of radios, but know well what they are. The only thing I can see is that one of the light bulbs that illuminated one of the dials needs to be replaced. Since neither this gentleman's son, nor I are experts at the use of these radios that is all I can say and you can see the condition yourself.

HQ-170 & Matching speaker $400 or b/o plus shipping. I realize both prices are on the high side, but these unit's physical condition are really nice.

Thanks.

Glenn,

Sorry, the power control only functions on CW. On SSB it does not do
anything.
It is not modifiable for this either without major work.

Well thanks to everyone who reasssured me on the posting. Here is the
problem.
First let me say that the set is installed on a boat which is over
in VK land and has no technical manual.
When press to talk is operated with no RF applied the meter reads
12 amps. (Finals collector current)??. With RF applied to give
18 - 20 amps on peak modulation it works OK but will only deliver 60
watts maximum with good SWR. This 12 amp standing current does not
seem normal. What do you think.
73's Pete ZL3PWS.

mean if you insist on concocting your own terms.
"Scanning" and "Searching" are as succinct and
simple as it gets.....not to mention fairly widely
accepted in the vernacular.

> Matthew - tired of petty grammatical fights

So.....get some sleep. And don't invent terms.

All GRE-made scanners that had/have cellular
capability in the first place. Also some,
if not all AOR scanners, and possibly some
Icoms. WiNRADiO also does 30 kHz steps.

Uniden never made a 30 kHz stepped
scanner, I don't believe.

Hmm, interesting. I've never used mine on cw but the QRP setting definitely works in the SSB mode. If you want to adjust it, remove the top cover and look for the little pot marked LO POWER at the back left corner of the board. You can dial it from less than a watt to full power with that pot, it adjusts just the same as the HI POWER pot right next to it. If you have 35 watts then maybe somebody turned dem screws a wee bit....

I have a ft712rh 70cm ,it's kinda like a 5100 , but only one band. When ptt is pushed the transmitter seemto wait a half-second to get up to power . I don't think any mods have ever done to the rig. What could be causing this transmit start up delay?
thanks, Kim WN5I

4587. Kenwood or Yaesu dual bands (FT-8500 or TM-V7A)

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-14 00:00:00 UTC
From: KC7ZRU <NoSpam@cyberhighway.net>
Message-ID: <355A95A1.B0A7382B@cyberhighway.net>
Source record: 144105

I'm also on the 'hunt' for a new mobile dual band rig. Been looking at the Yaesu FT-8500 or the FT-8100. Comments in this group have pretty well sold me on the FT-8500.

Then I started looking at the Kenwood TM-V7A. It's starting to look pretty attractive, yea it's about $100 more - but the feature list backs that pretty well. Biggest concern is that fancy blue display - going to take a 'face to face' look at it at a Hamfest coming up. I'm looking for comments, suggestions, experiences, feed-back, opinions from folks that have used either or both of these rigs.

Thanks in advance!

I have the following Radio, and electronic equipment for sale. Reasonable offers or trades for Pentium computer EQ. will be considered. All working last time tested unless noted. Shipping is extra.
Thanks

• Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters.Looks good and works well. 100W output. $200

. Siltronix 1011D excellent condition both in looks and operation. Scale of 1/10. I would rate 9.5. $200

. Swan Cygnet Model 270 SSB Transceiver Transceiver has internal Power supply 80-10 meters. Looks good
works well. $225

• Heathkit HW 101, 80-10 meter transceiver. No Power supply. It is receiving, but don't not transmit. Looks are 7/10. As is $80.

• Hallicrafters Model S-108 SW Receiver with a calb. Ham band spread. Looks good works well.$75

• MFJ Rtty/CW Computer Interface Model MFJ-1224, used for copying code from the radio to your computer. $50 OBO

• Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $100

• Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $125

• Channel Master- All Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM. AM not working. $125

. AR Inc.- Stereo Amp, all solid state. $100

Source record: 144110

A friend of mine purchased an old Yaesu 440 handheld at a hamfest. The model is FT703. He got no information with it. There are 7 switches inside where the battery slides on. We are suspecting that these might set tone squelch frequencies. Can someone confirm this and maybe tell us the coding scheme for the tone frequency value. Our guess is that 6 of the switches set the frequency and the 7th turns the tone on or off.

Thanks,
Dave Woolf - K8RSP

SIX CLUB'S FIRST SPRINT
MAY 16th and 17th 1998
IN CONJUNCTION WITH ARRL 50MHZ SPRINT

The Six Club Sprint will be from 2300Z Saturday of the following week until
0300Z Sunday (May 16-17, 1998) .
THIS WILL BE THE FIRST AND ONLY SPRINT THAT WILL BE IN CONJUNCTION WITH ANY
OTHER SPRINT.
SPRINT RULES
The Six Club rules are simple, score one point for all qso contacts and the
grids are the multiplier. Explanation: If you have 10 qso's and 25 grids
your score would be total grids times total qso's. Other words 25 times 10.
ROVERS ARE WELCOME TO JOIN IN ON THE FUN. ROVER RULES ARE THE SAME AS THE
OLD STYLE ARRL.
HAVE FUN

Jim,
Your Racal uses the Patented Wadley triple loop, if I remember
correctly National used another trick in the HRO500, the
"phase lock and drag the HF Osc along with a tunable (hopefully
stable) VFO at low freq." technique.

My first exposure to this beasty was (c 1975) when a local ham tried to connect a freq
counter to give himself digital frequency readout. (ps he was a wealthy
American who retired here and brought the rcvr over with him). As the
old song goes " a lotta men tried, a lotta men died!".

About ten yrs back another HRO500 crossed my path, this one was very
dead... it remained that way.... if I recall the chips were SP800(?)
or SP900(?) devices... anyway no one had ever heard of them!

Fabulous looking rcvr, really in the grand style.
John

Well, it can't be too hard to fix! I run 100 watts daily on 40, 20, 17 and 15. With no problems at all in my '98 Blazer. Using a Hustler mounted into the metal off the rear door. Can provide more details on antenna mounting on the Blazer if interested.

Very nice post AB5VH. There's hope for these newsgroups yet. The only thing I might add is to use a shielded wire. On some rigs any stray RF makes keyers do funny things. One thing I have done that saves soldering on those little mini-jacks. I cut the headphones off a set of off of old stereo headphones and use the stereo plug and wire. If you don't have an old pair you can find cheap earbuds for $3 and up. Most have shielding (although poor), are flexible and probably will do the job.

Going to put up an inverted EL for 160 meters and I am in need of a couple of air variable capacitors of around 300-400pf each. Smaller value ones will also be considered as I can just parallel up what I need for more capacitance. Close spacing should be ok as I will be running under 100 watts. Please email me with what you have and your asking price.

My FT-757GXII now have a problem, it's sensitivity very low.
If I turn on the RF AMP, then it can receive the few strong station,
But if turn off the RF AMP, then the strong station will very weak.
All the band is in this case. My antenna is ok, beacuse another
RIG(FT-101e) work very well in DX.

What is the trouble? Any suggestion is very welcome, tnx.

Source record: 143734

My club station has an Icom transceiver, and a Yaesu amplifier. I'd like to build an adapter to read the 0-8V off the Icom ACC and convert it into the 4pin signal (whatever that is) that the Yaesu wants to see. The Yaesu's aparently either use a 9pin or 28pin Molex connector, with four pins indicating the band which the tranceiver is operating.

Can anyone tell me what the Yaesu's output is on those four pins? The FL-7000 shows it as "Band Data A-D" . If it's 4bits of 5V TTL, could anyone give me the truth table of the XXXX verses the corresponding band?

Thanks,

Andy, N5LDI

I have a Toshiba 425CDT and I've used for HF (Yaesu FT990
with beam) and VHF, and it doesn't seem to make much noise.
If you put the VHF radio near it, you will hear some noise,
but it's nothing compared to the CRT on my desktop computer.

It's a great laptop. The only thing I don't like is
that you can't power it from 12vdc; it takes 115vac and the
power supply is internal.

No, It transmits only 440-450 MHz out of the box. TX range can be extended,
but please don't ask me how as it is not legal. Wideband TX modification
will make the radio transmit as far as it's PLL will lock.

Dick Grady wrote in message <355cba35.36585224@news.mdc.net>...

The original Radio Shack 2006 is one that is easily modifiable and scans in 30 KHz steps. One of the reasons they still demand a premium price on the used equipment market, I suspect.

4621. Need advice

Source record: 143928
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH2PZ, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists
==========

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see
http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Thanks for taking the time to read my message - if you don't like the prices, make me a reasonable offer, and I assure you I will consider what you offer!! ALL PRICES PLUS SHIPPING!!

Got a NEW ADI AT-201 HP (high power) 5 watt ht, received in trade, with extended transmit/receive 2 meter ht. $150.00

Also have a 486/33 tower computer 12 meg memory, 400 meg hardrive, soundcard, vga b&w monitor , 14.4 internal modem, all new except for the hardrive and monitor. $300

Casio TV-430 2" color tv, works perfectly, looks new, I purchased new a radio shack wall wart, so I can watch tv in the shack without using batteries. $45.00

Timex/Sinclair 1000 ! 1980 Era, collectors item for sure, works perfectly, includes everything but tape recorder and monitor, even have original games!!

Tandy TRS Model 4 Good condition.

Needing to sell stuff to purchase hf rig!!

if you have a friend in Canada or if you live close to Canada, you may be able to find one as a discontinued product at RS. It's $299 CAN or around $160 US. It's been for a while so you may not be able to find one easily... but I am sure you can "special order" the product.

I am in need of one of those simple el Cheapo inline SWR bridges. The rectangular unit with SO-239's on each end and some of them could even be used as a FS meter. They had one knob to set the forward power and then a switch to read reflected. I need one that will go up into the VHF band and as I recall most of these units would read from 3-150mhz. They sold for around $19.95 new. Anyhoo that's what I need. Email me with what you have and a price.

4635. FAQ: Plectron and Motorola Alert Monitor Receivers

Newsgroup: rec.radio.amateur.equipment

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X
SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant

max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I am new to the HF world, and have a Yaesu 901dm.
I purchased a Bencher BY-1 paddles over the net, ready to hook into my "built in keyer" on the radio. The salesguy from HRO assured me you just hook the paddles into the radio and you're CW'ing within minutes.

I open up the package, and ... NO WIRES!
The paddles are just stand-alone.

So my obvious question is: How do I hook the paddles into my radio?
There's a phono-type plug in the back of my 901dm for a "straight key or paddles", and some contact leads at the bottom of the paddles.

Do I need to head for my local Radio Shack and buy some kind of wire-set?

Please help!

Pin 5 on the "ACC" (13-pin DIN) socket is described in the
instruction manual as:

"Band voltage output (Varies with amateur band) --- 0-8 volts"

Using a Fluke D804 Digital Mulitmeter, the voltage (in receive mode) vs.
frequency was measured. Frequencies are in Mhz. The intervals include
their lower bound; they exclude their upper bound (i.e. the interval is
closed at the low end; open at the high).

Low	High	Voltage	%7.97V	Ham Bands
0	2	7.55	95	160
2	4	6.17	77	80/75
4	8	5.16	65	40
8	11	0.04	1	30
11	15	4.14	52	20
15	22	3.25	41	17,15
22	30	2.27	28	12,10
30	200	1.25	16	6,2

The 8-volt (reference) supply measured 7.97 volts. Voltages were
measured in receive mode. They decreased only 0.01 to 0.02 volts in
transmit mode within the amateur bands with zero power output (unkeyed
CW mode or no audio in SSB).

Happy Bandswitching,

Jim Wilson, WA5BRB

>

I don't know about the 901dm, but most rigs need a 1/4" stereo phono plug.
You'll also need about a 4' chunk of 3 conductor wire. After you RTFM, you
should know what to do with them.

Unless the FT-901DM has a built in keyer you will have to hook the
BY-1 to a keyer and then hook the keyer to the key jack on the rig.

Hi all,

First, my apologies if this appears to be a duplicate of a previous posting from me. Dejanews sent me a confirmation of my posting, but it never showed up...

Anyway, I've read enough postings on this group to know that almost any dualband HT can be considered "best" for me depending on my budget and what features I need. Maybe I should look at the decision differently.

Those of you using dualband HT's: I'd be interested to know what features prompted you to buy the rig you currently use. Are they as important to you now as you thought they would be? Do you wish your rig had more or different features?

I may think that I need crossband repeat when, in reality, it is more important for my mobile to have it. I may not care much about physical size of the rig now, but may find that "size *does* matter" after purchasing one.

I think this is a different way of looking at this issue. I would really appreciate some feedback from the group.

Thanks,
Chris I.

4652. FS: EMI-RFI Receivers

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-15 00:00:00 UTC
From: Lewis Coppes <lcoppes@primenet.com>
Message-ID: <6jhr18$3c0@nntp02.primenet.com>
Source record: 143952

Eaton/Ailtech NM-37/57A EMI Receiver $650.00

Manual or programmable EMI emmission measurements
from 30 MHz to 1 GHz in accordance with military
specifications and commercial standards. Range of 140 dB
(.1 uV to 1.0 V) 50 Ohm input.120/230 VAC (50-400 Hz)
or rechargeable NiCad battery operation.

Ailtech NM17\27A EMI-RFI Receiver $650.00

The AILTECH Model NM 17-27A /SL is a precision EMI-RFI receiver
covering the frequency range of 10 kHz / 32 mhz in 8 bands.
Voltage measurment range is specified at .01 microvolt / 1 Volt.

Internal solid state impulse generator for calibration source.
Has four bandwidths (100 Hz, 1 kHz, 10 kHz and 50 kHz). Internal
scan mode provides a scan of entire band in approx. 60 seconds.
X-Y outputs for plotter. Provision is made for limiting the segment
of the band to be scanned.

This is perhaps the finest EMI-RFI receiver ever designed.
The incredible sensitivity of these units ALSO MAKE THEM AN
EXCELLENT GENERAL COVERAGE RECEIVER. Just connect a Fz counter
to the local oscilator output jack on the rear panel (so exact
fz. can be determined) and you have one of the finest SW receivers
ever built. Outputs are also provided to connect an oscilloscope
for spectrum analysis capabilities. Performs EMI emission
measurements from 10 kHz to 32 mHz in accordance with MIL-STD-461A
and other applicable military specifications and commercial standards.

Prices subject to change and all items subject to prior sale.
Visa, MasterCard, American Express, Discover accepted. Personal
checks subject to acceptance.

All items sold with limited 30-day warranty (parts and labor only),
and a 10-day right of return. Prices do not include
Shipping/Handling.

Message-ID: <myke-1505981105080001@c-71-79.corp.adobe.com>
Source record: 143957

I finally got a hiring bonus for getting a friend of mine hired at Adobe (oh, btw, I'll be happy to take your resume, too!... send 'em to me at "myke @ adobe.com").

So with the extra disposable income, I was hoping to buy a new handheld unit and jumpstart my activity out here (I haven't had a chance to play around with my license for many years now). I know that the 2 Meter band isn't the only active band for repeaters in California, but, forgive the newbie-ness of this question: if I were to buy a dual band handheld radio, which bands are the active ones and what are the best units to be looking at?

Post here, or send a message to my adobe.com account (the umich.edu address is bogus to discourage lame spamming).

Thanks a lot for any advice!

>
>

All you need is a stereo plug for the keyer jack, a three wire cable to the paddles, and a few minutes to figure out what is what. This is a three wire circuit. One is common, one is dit, and one is dah. solder the three wires to the stereo plug, stick it in there, and figure out through trial and error which wire goes to which terminal on the paddle. When you got the right paddle producing dits and the left one producing dahs, or the other way around if you prefer, you are set.

Definitely spend a couple of hours practicing before you go on the air. Record your sidetone output and play it back, and see how you sound. You will probably suck the first half hour or so, but don't sweat it. Just keep practicing until you are sending nice code, then try it on the air. Have a straight key plugged in too, just in case you need to revert to it.

If you are REALLY new to HF, especially to CW, I suggest sticking with a straight key for a few months until you got that down pat, then going to the paddle. The same practice technique applies... listen to recordings of yourself. Don't just listen to yourself WHILE you are sending... you know exactly what you are sending while you are sending it. Make sure you can copy yourself by ear and so are easy copy to someone else who is listening. I have heard a lot of really punishing CW, and just as much comes from paddles and

bugs as it does from straight pump keys. Develop a nice clean fist with the pumper first, and you will send better code when you move up to the Bencher. You will make ten times as many memorable contacts if you have a pleasant fist, and you will not automatically have one just because you are using a keyer.

The trick to using a keyer to send perfect code is to stay just slightly ahead of the keyer within a character, allowing the keyer to use the correct interval between elements. In other words, you are initiating the next element (dit or dah) before the preceding one has finished. The keyer will then wait automatically for the correct interval before starting the next dit or dah. This is tricky at first, and you must be sure to let a dah drag on beyond the time interval of a dit before releasing the paddle or you will just have a dit. Mentally count out a good long dah for a space between letters, and a couple of them between words. Nothing is more frustrating than ran-together letters and words. You see, even with dits and dahs set perfectly to the correct length by the keyer, you can still trash your sending with long, variable inter-element spaces or too-short inter-character or inter-word spaces.

One interesting feature of most modern keyers is that pressing both paddles sends dit-dah-dit-dah-dit or dah-dit-dha-dit, with the first element being the one corresponding to the paddle you depressed first. You can make good advantage of this with a little practice.

Remember-- STAY SLIGHTLY AHEAD of the keyer within a letter or character, initiating the next element before the keyer is done with the last one. Practice practice practice, and tape yourself. Get friendly with the straight key first, and keep it handy to fall back on for quick QRS repeats. Try to send the kind of code others want to copy and you will make more and better contacts.

If you just can't get the knack of it, don't sweat it. You have a computer, and a keying interface is easy. The simplest one I have used is a single 2N2222A, a DB-9 connector, two wires, and a plug for the key jack. You type, it sends, and timing is perfect as long as you are typing a bit ahead of the keying. SUPERMORSE, available at my website, works well for this. HAMCOMM works similarly, and you can recieve as well, for a backup to your ear copy. The neatest thing about computer-aided CW is the blistering speeds possible between two computerized CW stations. 50 WPM is do-able under good conditions. The secret is that the sent code must be perfectly timed to be well copied by computer... two computers can send and recieve to each other almost as accurately as human ears alone, and at higher speeds when interference is modest. Computer sending alone is also a good fallback for old-timers suffering from arthritis. It is easy to set up often-used phrases as keyboard macros to send at the push of a function key, and just fill in from the keyboard. If you can copy in your head without benefit of pad and pen, or if you are getting good on-screen copy, you can begin composing your reply during the other op's transmission, and begin dumping the type-ahead buffer when he signs over to you. Keyboard CW will never replace manual methods, not entirely, but it is appropriate and practical for many, and can be a lot of fun, enabling those who cannot hand-send well or comfortably to get nice code out there.

Oh, by the way, WELCOME to HF, and no matter what you do with CW, have fun with it. CU

Source record: 143963

I need the Modification for the Standard C-468A 440 MHZ Handi-Talkie.
That would allow me to open up the Transmit Range from 400 to 474 MHz. I
know there
Is a mod for this radio, I just don't know where to find itï¿½.I've tried
QRZ and OAK but no help.
I own the C-528A and the C-628A Dual-Band Handi-Talkies and have found
the Keypad modifications
For both and have done them. They worked out fine. I'm sure there is a
mod to open up the C-468A.

Anyone who could either pass the Modification along to me, or could tell
me where to find it. I would be in debted to foreverï¿½ï¿½.

Thanks Very Much,

Carl Domanico N2MFW

Looks like a good companion to the FT-847. Too bad it isn't coming out
until the fall and then, of course, there will be the requisite 6 month
cooling off period for the bugs to work out!

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Hi, I was wondering if anyone has the schematics for this vox mike that can be used with the FT-530. I wish to adapt it so that instead of a boom, i can use a telephone handset style mike/earphone.

-Daniel

The manual doesn't say what the voltages are for a given band, only that there is 0 to 8 Volts at pin 5 of the 13 pin ACC Socket. If you have a voltmeter, it should be easy enough to check the voltage as the bands are changed. If you have the OPC-599 cable connected to the ACC Socket, you'd need to check pin 4 of the ACC 2 (7 pin) Socket.

4678. Locking Mobile Bracket for IC-706MKII

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-15 00:00:00 UTC
From: Kevin Lanning <kevin.lanning@eastgroup.com>
Message-ID: <SXN61.36$4x.246948@news.randori.com>
Source record: 144017

I am using the mobile bracket from a Motorola Maxar on my IC-706MKII. This has two advantages. It is basically a two piece bracket that will let you quickly remove the radio by simply unhooking all the connectors and sliding it out. It also has a lock on the side to lock it in place to prevent theft. When locked in place there are no mounting screws accessible. The only way to remove it without the key is either yank it out of the floor (if you can pull that hard) or get a hacksaw. This bracket fits the Motorola Moxy radios and probably just about all the older Motorola mobiles. Look for them at hamfests or Motorola may even have some available. They look like normal mounting brackets with a lock on the side and fit perfectly on the 706. Anyway, just a suggestion.

4679. FM828 crystal alternatives - PLL anyone?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-15 00:00:00 UTC
From: Mark Harrison <harrisonm@mail.medoto.unimelb.edu.au>

Does anyone know of a suitable PLL synthesiser PCB/module to replace the crystals
in the Philips FM828 series UHF transceiver? The radios are cheap but a set of repeater crystals are not!.

Alternatively, can anyone recommend low cost (and readily available) PLL synth chips for VHF or UHF. I know of the Motorola MC145xx series but they can be difficult to get.

Some comments:
1.I like a small radio.
2.I DON'T like a radio with less than 4 or more watts(well, maybe 3 or
more will 'do'
3.I don't really need cross-band repeat-my previous dual-bander(which I
still own, BTW) had it-in YEARS of use, I used cross-banding ONCE!
4.I do like simutanous dual receive, but again, I rarely used it-and the
newer units with dual watch do nearly as well for the rare occasion where
it is needed.
5.I DO like broad-rx, but all units have this now.
6.I don't like the intermod and images that result from #5. but there's
little choice.

Bravo AB5VH for giving this new ham a good straight answer. "RTFM" (first response in this thread) is too harsh an answer to give to a new ham who is humbling himself by asking a group this size for help. Please folks, remember when YOU were new to hamming....

Only thing to add is that the wires that go to the keyer paddle input of the radio attach to the little tabs (with holes in 'em) UNDER the Bencher paddle. Lightly crimp them as you figure out which wire is dit, which is dah, and which is common.

One more note, if it wasn't said above -- For a right-handed person, dits should be formed by pushing the LEFT paddle and dahs with the RIGHT.

I also concur that a new cw op should get a good feel for a straight key before sending with a keyer. This is DOUBLY true today, when many code classes teach how to copy but not how to send! Your rig should have a straight key input too. Once you get good with the straight key, start working with the keyer off the air. When you are ready, hook up that Bencher and go to town!

Dave, we welcome you to HF... particularly to CW.

Actually, I have seen this rig. It was used for a satellite demo. Seems to work well and looks good!

Andy,
I did just that with my IC-761 and FL-7000 amp. Works great except Icom does not distinguish between 10/12 and 15/17. I built an interface box that automatically switches the amp when I change bands on the Icom rig. I did not take clean notes but I think I can put something together for you. This weekend is hectic for me and I go out of town on business Tues. It may take a few days.

I found an old pair of Jobcom two way radios, but as it turns out, only one of them transmits and receives, the other only receives. I now have a project on my hands. If someone could hook me up with a schematic for the JBC100 radio I would greatly appreciate it. Thanks! Matt Annen

Yes it can, although not simultaneously (crossband repeat). Set VFO (A) to your Rx freq and B to the Tx and enable the VDUP feature. Now when you key you will be xmitting on B and will switch back to A on release.

Source record: 143755

>>I'd really appreciate your input on this one. I think
>> it is a different way of looking at the age-old debate
>> about what is the best handheld.

Not really. The ONLY appropriate response to the common inquiry, "What's the best HT for ME?" is:

What your independent research has discovered is the best HT for YOUR needs in YOUR region...after you've joined a Amateur Radio Club or two for the best info possible.

For example, I would NEVER tell anyone what MY first HT was in answering that "age-old" question. Because for me to tell anyone to purchase Standard's C288a as their first HT would be irresponsible. Does it perform flawlessly? of course it does. Is it one of the best 220 HTs available? Absolutely. Did I ever regret purchasing it? Nope - even bought a second one.

After joining three local radio groups and LEARNING what was available in my region, I made the VERY RESPONSIBLE, PERSONAL decision to purchase what I purchased. And that particular band and those HTs serve me very well to this day.

If one's personal research narrows down the band(s) on which one desires to operate, THEN and ONLY THEN should specific product recommendations be offered.

Just my personal opinion, of course.

From: clintbrad4d@earthlink.net
Message-ID: <6jjctvmok1@nnrp1.dejanews.com>
Source record: 143756

>>Those of you with dualband handhelds:
>>What features did your radio have that caused you to buy it?

My first dual-bander HT was Standard's C558a. I bought it because it was arguable the best unit available. "Best" to me equals "performance" plus "excellent product support from the manufacturer."

>>Do you really value those features today?

Absolutely.

>>Now that you've had your rig, do you wish that it had other features?

Nope. It still has features that I haven't even accessed.

I have also recently purchased a Yaseu FT-50RD - for several reasons. I already own a Vertex VX-10 commercial HT. So, while looking for an additional dual-bander, the fact that I could use my existing batteries from the VX-10 was attractive. ESPECIALLY the MAHA FNB-47 NiMH batteries (1800 mAH!!!) coupled with the Maha MH C777 Universal Charger - an unbeatable combination! Adding to the convoluted equation, I mistakenly purchased the ADMS software kit that I THOUGHT would program my VX-10. It doesn't. So...I have batteries and programming software for a FT-50 --- OR I could get another HT and have to invest in completely new accessories.

Well, the FT-50Rd is an amazing little HT. I am enjoying the heck out of it.

>remember when YOU were new to hamming....
>
>

Thanx... thhought about that... and figured maybe the guy didn't have a manual. Cant RTFM without a FM to RT. HI HI. Also, I might ask a bonehead question somedyay myself, and I would like to be able to say I paid my dues and deseve a straight answer, instead of "You're an Extra class... and you don't know that?!?!?!!? RTFM!" I would rather get a straight answer, and know that I have earned one. RTFM is good advice, but he should have heard it from his Elmer, in more general terms, whem he was first licensed, and the assumption should be that the newbie doesn't HAVE a manual, or else he would not be asking the question.

Besides, I doubt that Bencher would suggest using a pump key or a computer rather than their own product HI. A manual does not always tell it COMPLETELY like it is... after all, their main objective is to convince the customer or potential customer that buying the product is a good idea.

I just hope that I helped enough to make up for stirring up any SHTUFF.

Also... OOPS! I taught myself to send with a keyer and paddle lefthanded so I could write right'handed at the same time. Commercial traffic is heavy on the QSK... a coast station will break in pretty quickly if he misses a letter or two. It almost has a full duplex feel to it, and the shipboard op better be ready for a repeat request, etc, especially when other ships want to use a busy coast station. I do use a bug or a pump righthanded. The only time I have ever used a paddle was for sending commercial traffic. I personally prefer bug or straight key for hamming, the only CW action I get these days. I do nott own a paddle or a keyer.

I just received my 847 and putting it on the bench found that the on/off switch would not stay on. I talked to AES's tech and he told me that this was the second one he knew of with this problem. Being the weekend and not being able to ship back untill monday, I popped off the cover looking for the obvious. I really didn't see anything, but just before putting the top back, I pushed on the PC Board on the radio face, wallah the radio now plays as it should. Just thought I'd pass this along in case others find this problem, may save you having to send back for repairs

The reason why I ask is that I tried to do one. I eliminated the mixer and soldered a piece of 50 ohm coax to the output of the preselector. I checked it on a receiver and the receiver had about .5uv for about 20db quieting without the preselector. The when I put in the preselector, and tuned it, it jumped up to about 3uv for the same quieting. The losses seemed excessive. However, due to my lack of experience with the preselector filter, I don't know if this is in an acceptable ballpark. I know 3uv is not. I am wondering if I go the site and use the preamp will it bring the sensitivity to an acceptable level.

Most of the Cheap units dont work to well on VHFInfact most of them only
work "well" on the upper portion of HF (say 20 mhz to 30 mhz)
There are a few Cheap VHF/UHF units out there, the one Radio Shack carried
had
no adjustment for setting callibration on swr All it had was a power sw (5w
15w)
and a SWR/Power Sw. If I remember they were about $30 new

4718. WTB: Manual for HW-12

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-16 00:00:00 UTC
From: "David Hoffman, W2ONP" <w2onp@frontiernet.net>
Message-ID: <6jkdsl$23gu$1@node17.cwnet.frontiernet.net>
Source record: 143826

I am looking for the manual for an HW-12 75m SSB Rig, made by Heathkit in the early 1960's. Also, HW-12A is useable.

Am willing to pay copy costs + Shipping, or buy whole manual.

Please contact me via E-mail at w2onp@frontiernet.net

Dave, W2ONP

Hi,
I have forsale in very good condition a Yaesu
FT-101E with matching
speaker - landliner phone patch and microphone.
Includes original
manual. Works perfectly with 150 watts out, all
bands! Slightly less
on 10 and 11. Front panel excellent, case has a
few minor scratches,
thin hairline crack on S meter. Otherwise,
perfect. $350 plus
shipping or best offer.
Thanks!

That Radio can only have one of these Spreads of 400-440(ver A)
20-450(verB)
450-490(verD) 480-512(verF)
Ver A B D can be work directly in HAM Bands. But you need the computer /
Cables / Software to change channels. 4 channels isn't enough to do any
thing except to work as a link receiver or transmitter.

4731. help with HF + 6m xceiver selection

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-16 00:00:00 UTC
From: Bill Brasier <mush@ricochet.com>
Message-ID: <6jkq46$ik9$1@supernews.com>
Source record: 143839

I'm new to HF and am looking to buy a used Kenwood, Icom or Yaesu HF + 6 m base station xceiver of last several years vintage. I'm looking for something that is reliable, intuitive to use, with approx 100W output power on all bands. A popular unit that is easy to resell if I upgrade is an important feature. Primary use will be for voice. My budget is up to around $1000.

Question #1 I'm looking for suggestions from the group as to what manufacturer & model unit(s) I should look for.

Question #2 How do I find web based technical specs and features lists on used, no longer in production gear? The manufacturers web pages only talk about the current models? Since I'm unfamiliar with the gear, just the model #, doesn't tell me much.

73,

Bill, K6BIL

4745. {G0VWL} HRO 500 QUESTION ++++

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-16 00:00:00 UTC
From: Mike Waterfall <Mike@mwaterfall.demon.co.uk>
Message-ID: <Wy0FoBADWeX1Ew0a@mwaterfall.demon.co.uk>
Source record: 143853
Cross-posted to: rec.radio.amateur.equipment,uk.radio.amateur

FYI

HRO 500 covered 5Khz to 30 Mhz in 60 500kHZ bands, 10Khz per tuning knob
revolution
modes supported were am/lsb/usb/cw/fsk
filters were 8/5/2.5/0.5 kHz at -6dB
stability <100 Hz PER DAY!. ok things are better now, so they say!.
Built between 1964 and 1973
current value on the U.S market... $600 - 1500

This is nothing like the HRO that had the 'plug-in' coils..
73....

FREE !!! if you collect it

PYE A200 60 Watt Power Amplifier in M1 Band can
be retuned to 6m, 4m or 2m (with copy of HRT article)
£35 includes P&P

DATONG RF Speech clipper (Processor) unit
£12 includes P&P

Unused CM100 PCB making kit complete to make
Professional looking PCB's with UV Bulb and
Photosensitive film.
£12.50 includes P&P

Hewlett Packard 175A Oscilloscope. 50Mhz Y Amp needs attention
but tube and time base believed OK.
This is very BIG and HEAVY so it is FREE BUT you collect it

2 off Hewlett Packard Coax to Wave guide adapters
Model H281a (7.05 - 10.0 Ghz)
£2 each or £3 for both includes P&P

Kit of bits for a 286 pc.
All in one mother board + 1MB Memory with Seagate st351a/x HDD
with manual + drivers
£25 includes P&P

Packard Bell case + PSU £5 if you collect it or carriage extra.

Packard Bell 386sx Motherboard not working (junk box bits)
FREE !!! if you collect it

2off 3 1/2" 1.44mb floppy drives not working (junk box bits)
FREE !!! if you collect

4 IBM compatible keyboards 2 unused and boxed, 2 used - no box
Solid metal construction quite heavy so£3 each if you collect or carriage extra.

MS 5118 Pentium Motherboard with Intel P100 CPU and Heatsink / Fan
supports up to P133 (in manual 40, 50, 60, 66 Mhz bus speeds)
will support 120 Mhz M1 and upto 512 Mb memory with manual + drivers
£40 includes P&P

32Mb Fast Page memory (4 * 8MB simms)
£32 the lot or £9 each simm includes P&P

4 speed IDE CD rom drive
£20 includes P&P

New unused PCI 4MB S3/3D Virge DX SVGA card
£25.00 includes P&P ** NO OFFERS **

I am located in south Manchester - Stockport
so that should give you some idea of distance.
E-mail me with your offer ?

4755. TMV7A has terrible safety flaw.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-17 00:00:00 UTC
From: Larry KJ7YM <kj7ym@bigfoot.com>
Message-ID: <6jobe2ntl1@news.goodnet.com>
Source record: 143674

I am the owner of two TMV7A radios, I bought my first one when I saw how beautiful the Blue face looked in a friends ham shack. I brought the first one home,and put it in my shack, and Dang did it look good, and do neat things to, I was so impressed with the capabilities of the radio that it is a shame to have to say that it is an unsafe piece of dung. In my opinion, it is without a doubt the most terrible radio for mobil use I have ever seen, (this by the way is a bad thing for what is suppose to be a MOBIL RADIO, no?) This thing is a total danger on the road, It is simply unusable in a car. I would gladly take a refund on both or trade outright for any other radio with the exactly same features but with a safe screen. I have tried shielding the screen, and just about every other thing I can think of, but I still have to pull off onto the shoulder of the freeway, and even with my best efforts to see the display, try to guess which buttons to push to change the display and change contrast to suit that moments light conditions, often nothing I do can alow me to see the display well enough to be safe, and all this while at a dead stop shielding it as best I can. Further I have taken to setting the radio on the passenger side floor as far up against the firewall as possible, with it tilted up and pointed straight at me. Some of my friends have gone to all kinds of extreems to see theirs better, ie. remote mounting, mirror mounting, etc. etc, etc,. Why are there so many fixes and contortions necessary on what some are claiming to be so many light years ahead of other radios? I own eleven radios currently, five of which are dual banders, as well as one repeater, with anouther repeater on the way, I have owned and sold and even thrown away many other radios and in my opinion,(and I accept that it is just my opinion), none have any flaw or combination of flaws as bad as this single flaw in the TMV7A. I have never written a letter about anything other product and except for this product, I may never again, but this is so terrible, and unsafe I felt I just had to warn others.

Now there are a few out there who have taken offense at my sharing of my experiences,
Oh shucks.............., I also have a lot invested in mine but I dont really see it as a phallic symbol or a measure of my manhood. Though as I said before, it does some really cool things, many of the features are vital to me. I own and maintain a repeater in our area, and access the autopatch with the one way crossband feature. One way crossbanding was something I did not think my FT5100 could do, until after I bought the TM-V7A. A tip for that, just turn on the CTCSS decode on the output side(optional board), and unless the repeater or autopatch you are accessing returns the same tone, you will be one way crossbanding with your Yaesu FT-5100, and able to operate the auto patch feature. (By the way thanks to Keith Casey for this tip, Humorously enough, Keith is one of those that is on opposites of the TMV7A issue with me.) I also use the remote control capabilities heavily,

every day in fact. Still as before stated, I would gladly trade for a radio with the exact same features, but with a even moderately decent display. (yes, yes I already have the overly loud women synthetic voice.) Maybe next year Kenwood will reengineer the display.

Well as I said, I hate to admit that my wonderful new toy has a flaw, when there are many out there that think, even insist, yeah even demand that their purchase must be the worlds most perfect device of its kind on earth, as for me, I will say, close maybe, except for one amazingly glaring, huge, terrible, potentially fatal fault, (Oh no, I diss'd it again, what kind of man would admit that his own choice of radio had even one flaw, Shameless!!!!)

Ah well, as I have said before, "oh shucks".

Another wise friend of mine, often reminds me when I get to intense about my repeater and its occasional problems and repairs, "Remember Larry, its just a hobby, just for fun"

It's not illegal for him to tell you how to do it, nor is it illegal
for you to modify it. Only if you use it outside of the allocated
Amateur frequencies. It then becomes a non type accepted transceiver.
It's an FCC thing. Specifications are only guaranteed within the
frequencies it is principally designed to operate at.

4764. New HTX-202 is off frequency - please email reply

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-17 00:00:00 UTC
From: Paul Lantz <plantz@onlink.net>
Message-ID: <01bd8148$1ad902e0$0200a8c0@linda>
Source record: 143868

I just bought an HTX-202 2m HT at Radio Shack today. Tried it out at home and seemed unable to communicate with other radios--until I changed the frequency, it seems to transmit about 15kHz low, so if I want to be on 146.520 I set display for 146.535.
Any idea why this would happen? Please reply by email as my news server is usually several days behind.
This is not repeater shift which is 600kHz.
I can't see any setting in the manual for offsetting the displayed frequency (and can't imagine why someone would want to be off freq anyway).
Probably will take it back tomorrow so curious to know if other people have this problem.
I ran into the RF overload problem, just inside, it conks out on ERR2 when you run full power from alkaline battery pack, seems OK outside. This problem was noted on a card inserted in the manual.
Nice, cheap HT, very easy to use. I picked it up on sale - I like to have an extra HT for the cottage which is in area that is just 2m, no 440.

Message-ID: <355fb7f9.1136037@news.i-2000.com>
Source record: 143873

Eico 147A Signal Tracer--rather unique instrument--also has noise
locater and a circuit for determining the wattage of a unit that you
plug into the 147 up to 500 watts. The unit is clean and working
fine. It is lacking the RF probe, but that is a simple affair that is
made up of a 1N48 diode, and a 470k resistor, as per the photocopy of
the manual which is included.....$30.00 + shp Bob K2LGO
Pse remove the (ns) from my adr.....

4770. FS: Icom IC-04AT UHF HT

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-17 00:00:00 UTC
From: KC7ZRU <NoSpam@cyberhighway.net>
Message-ID: <355EBC68.FBEECC7A@cyberhighway.net>
Source record: 143874

Icom UHF (440-450MHz) FM Hand Held Transceiver, model IC-04AT (10
memory, any in band split programable). Has PL (CTCSS) encode.

Includes:
Desk charger (BC-30)
2 batteries (IC-BP3 and BP-7) RF output with BP-7 2.5W, BP3 0.5W
MFJ Speaker Mike, has jack for external speaker
Manufacture's 'rubber duck' antenna and belt clip
Origional Manual

$150 Firm - pick it up in Laramie, WY, you pay shipping or COD charges.
Heck, you have another workable idea - lemme know.

More specs:
IF: 1st - 21.8Mhz 2nd - 455kHz
Sensitivity: < 0.3uV for 12dB SINAD
< 0.4uV for 20dB noise quieting
Selectivity: >+/- 7.5kHz at -6dB point
<+/- 15kHz at -60dB point
Audio Out: >500mW (at 8ohms, 10% distortion)
(all according to the manual)

This HT has a very similar look and feel to the HTX-202 2m HT. Batteries
are interchangable (No question in my head as to who makes the 202
now!). This is the same as the sale price R.Shack is asking (last I
looked) for their HTX-404 without the extras.

Paul,
Take it backto Radio Shack and tell them what the problem is. They
should replace it with a new one. I have seen this several times in
the last couple of years, and that is what Radio Shack has done here.

Source record: 143880

Hi

>> >Is there any reason to buy ICOM's (high-priced) PS-85 or would
>> >any old 20A+ Astron do?
>> >
>>
>> Not unless you just like matching equipment. Try mounting it in the
car
>> and you won't need either power supply...

The PS-85 is even not available in Europe... While mentioning Europe:
The
IC706 that are sold in Europe include the OPC-639, a quite large ECM
filter,
approx 1/4 of the size of the rig!

>> >Any other general positive or negative comments about the 706MKII
>> >would also be appreciated.

I would buy it again, although there are a few negative points that
annoy
me:

1. There are at least 3 different programs to remote control this rig
(and
other Icoms). I have found and tested 2 for Win95 and 1 for the
Macintosh.
None of them was able to set the memoriy channels completely: I could
only set
the frequency, but not the mode (for example split on 2m) and not the
alphanumeric
name of the memory channel. By the way, programing a memory channel
manually takes
quite a lot of time, especially entering the name.

2. No SWR is displayed while working on 2 meters.

3. Due to its small size, the quality of its receiver is limited (no
space
for selective band pass filters, I guess, therefore problems with 3rd
order intermodulation
and self made qrm). Also due to the limited size of the display you need
to switch through
the different menues all the time to access functions like filter
on/off,
display name of the memory channel, changing DSP settings, etc.

4. IMHO, the DSP unit UT-106 which I bought a couple of days ago (since recently
it is included with every new IC706 MkII) is not very effective. Turning on the automatic notch reduces the sound quality. The noisefilter is ok, but you need to change the level (0-15) depending on the mode. I think there is
no setting that is good for FM and CW for example. Therefore you need to switch
through the menus even more than before. I also have the impression, that the
DSP unit produces a lot of heat. The IC706's internal fan runs more often
than before I had built in the UT-106.

>I want to use it both mobile and as a base station. Looks like
>the key and mic jacks are on the base unit, which adds some
>limitations to conveniently locating it in a vehicle even with
>the remote cable.

No, this is not true. You can connect the mic either to the back of the rig OR to the front panel!
According to the manual, it is also possible to connect a key to the front
panel, if you build a special 'key jack to mic jack' adapter by yourself. However, the
cw operating part of the manual is the worst one (uncomplete and confusing).
As a beginner, I was not able to set up cw operating, until an experienced
OM and IC706 user showed me that I had to change the default Break-in setting... :-)

I know, that almost all my writing is about negative things. But this is much more easier than listing all the advantages of this rig! It is just great for its purpose (mobile, dxpeditions) and there are no other transceivers
in this size class with HF and 6m/2m!

4788. Help with Yaesu FT-ONE

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-17 00:00:00 UTC
From: brobers@indiana.net
Message-ID: <355ef794.143157950@news.indy.net>
Source record: 143892

I just purchased a used FT-ONE and it came with no manuals so being new to HF I am a little lost. My questions are as follows:

1) When I bought the unit and brought it home I hooked it up to my 2m j-pole to just receive and see if everything seemed to work OK. Everything was fine. I was able to tune around to commercial and ham bands. I was able to use the CW modes and SSB. After using it a little while yesterday I began to test the waters and experiment with different settings. Now I can only hear stations when I am in the AM or FM setting. Is there something that I have changed that would stop me from hearing the sideband or cw signals? If I can hear any audio at the speaker when I have it in CW or SSB it is barely audible.

2) What is the proper sideband for each band? I heard once about frequencies above a certain point being upper or lower and everything below that point the other sideband.

Any help with this radio will be greatly appreciated.

Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment

I built the Ramsey FR-146 2 meter receiver, and it works great (with headphones)!

As I was adjusting the 3.5 turn coil, I noticed that it was noisy. When I touched the plastic casing, it almost sounded like there was a microphone somewhere close. I dismissed it.

But, when I installed a small speaker inside the enclosure, I get constant feedback. WHERE IS THE MICROPHONE!!!!

Does anyone know what is acting as a microphone? What can I do to shield it?

Thanks in advance,

Dave Frascone
